

Asharikandi terracotta - Assam

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of the Asharikandi terracotta tradition of Assam, specifically the Asharikandi–Madaikhali craft village cluster of Dhubri. Treat this as a village-specific fired-clay object system shaped by local Hiramati clay, clay mixed with sand and ash, hand-building and wheel-assisted pottery practice, sun-drying, decorating, and firing. Do not treat it as generic Indian terracotta, glossy ceramic studio craft, resin folk décor, or random rustic pottery styling.

Build the image as if it comes from a real Asharikandi terracotta world. The object must read first as fired earthen clay with local craft memory: warm earthy red-brown terracotta body, matte surface, handmade contour, clay-built mass, and typological object clarity. The surface must feel fired and earthen, not polished, lacquered, or glazed. The form must feel grown from clay mass rather than assembled from decorative pieces.

Use authentic Asharikandi figurative and object language where relevant: Hatima doll, Ainar horse, elephant, rhino, deity figures, ritual clay forms, and village pottery objects should feel like Asharikandi craft-types rather than generic terracotta figurines. If figures are present, they must remain typological, handcrafted, and object-centered instead of realism-first sculpture.

If environment, shelves, workspaces, grouped objects, or supporting surfaces are visible, all of them must reinforce village terracotta-cluster logic, fired clay objecthood, and artisan-craft context. The whole frame must feel born from Asharikandi clay intelligence.

Do not make it glossy ceramic. Do not make it painted toy craft. Do not make it realism-first sculpture. Do not make it generic terracotta décor. Do not let one clay-colored object carry the style while the rest of the image stays unrelated.

Reusable Variable Template

Create [SUBJECT / OBJECT / SCENE] in the authentic visual logic of the Asharikandi terracotta tradition of Assam.

Treat the style as a fired-clay object system from the Asharikandi–Madaikhali craft village of Dhubri, not as generic terracotta.

Core style system to preserve:

Asharikandi village-cluster identity

Hiramati clay memory

clay mixed with sand and ash
handmade and wheel-assisted clay shaping logic
sun-dried and fired terracotta body
earthy red-brown matte surface
handcrafted mass and contour
typological Asharikandi figurine-and-pottery language
whole-frame consistency so all visible elements belong to the same Asharikandi clay world

Translate the image like this:

[MAIN OBJECT / MAIN FIGURE] becomes an Asharikandi terracotta form built from fired clay mass

[SECONDARY OBJECTS / FIGURES] also obey the same matte earthen object grammar

[SURFACE / DETAIL ZONES] remain clay-first, handmade, and fired-earth based

[ENVIRONMENT / SUPPORTING SPACE] becomes a terracotta-craft context that supports village-object identity

If using iconic Asharikandi subject families, keep them village-specific:

Hatima doll

Ainar horse

elephant

rhino

deity figures

ritual or utilitarian pottery forms

Keep:

fired clay objecthood

matte earthen tactility

handmade irregularity

typological clarity

Asharikandi specificity

village terracotta-cluster identity

Avoid:

generic Indian terracotta

glossy ceramics

resin or fiberglass look

toy-like painted folk art

hyper-real portrait sculpture

a generic rustic scene with one clay object added later

Image-to-Image

Convert this source image into the authentic visual world of the Asharikandi terracotta tradition of Assam.

Preserve the source image's main object relationships, figure count, and overall readability, but rebuild the entire image through Asharikandi fired-clay logic. Replace ordinary materials with local-clay terracotta body. Replace smooth industrial finish with matte fired-earth surface. Replace realism-first sculptural behavior with typological handcrafted clay-object presence.

If the source image includes figurines, animals, dolls, idols, or pottery forms, reconstruct them as if they were shaped from Hiramati clay mixed with sand and ash, formed by hand or with wheel assistance, sun-dried, decorated, and fired in the Asharikandi tradition. If Hatima doll, Ainar horse, elephant, rhino, or deity forms are relevant, make them specifically feel like Asharikandi craft-types rather than generic Indian terracotta icons.

If surrounding space is present, convert it into a village terracotta-craft environment that supports fired clay objecthood, earthen surface identity, grouped handmade objects, and Asharikandi cluster logic. The final image must feel authored by Asharikandi clay grammar rather than by clay texture pasted onto another image.

Do not turn it into glossy pottery, modern ceramics, resin sculpture, or generic rustic terracotta mood. Rebuild the full image so it feels born from the Asharikandi fired-clay system.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image world rooted in the Asharikandi terracotta tradition of Assam. Treat this as a distinct village terracotta-and-pottery object system shaped by Hiramati clay, fired earthen body, handmade mass, and iconic Asharikandi figurative forms, not as generic terracotta styling or decorative pottery mood.

Keep the style source-rooted: clay mixed with sand and ash, fired matte earthen body, handcrafted contour, typological figurine language, pottery-object memory, and village-cluster identity. The world must still feel clay-first and object-first. Do not let visual richness replace fired-clay truth.

Allow the image to become more visually articulated while preserving Asharikandi clay structure. Clay masses may become more compositionally active. Surface transitions may become more expressive. Figure-object relationships may become more layered. Supporting space may become more integrated with the terracotta world. But the result must still feel like a fired-clay craft ecology, not like generic stylized sculpture or ethnic décor.

Material behavior must remain Asharikandi-specific: matte earthen red-brown terracotta, handmade contour variation, fired clay tactility, and object weight. The whole frame should

feel like Asharikandi terracotta intelligence is expanding into a richer 2D + 3D world without losing village craft identity.

Do not make it fantasy clay creature art. Do not make it polished ceramic décor. Do not make it toy-like folk exaggeration. Do not let earthy color alone substitute for Asharikandi object grammar.

Reusable Variable Template

Create [SUBJECT / OBJECT / SCENE] as a creative 2D + 3D translation rooted in the Asharikandi terracotta tradition of Assam.

Preserve these style-core rules:

- Asharikandi terracotta identity remains primary
- Hiramati-clay memory stays active
- fired clay mass remains visible
- earthy red-brown matte surface stays intact
- handmade contour and irregularity remain present
- iconic Asharikandi object families may appear where relevant
- the whole frame remains inside one Asharikandi clay-object world

Translate the image like this:

- [MAIN OBJECT / MAIN FIGURE] becomes a richer Asharikandi terracotta presence shaped by fired-clay object logic
- [SECONDARY FORMS] also obey the same handcrafted earthen grammar
- [SURFACES / DETAILS] become more expressive while staying matte and clay-first
- [ENVIRONMENT / SUPPORTING SPACE] becomes a broader terracotta craft-world context instead of generic realism

Let these become richer:

- object relationships
- surface articulation
- clay form hierarchy
- 2D + 3D object-world depth
- village terracotta atmosphere rooted in craft logic

Keep unchanged:

- fired clay identity
- matte earthen tactility
- handmade object presence
- typological Asharikandi reading
- cluster-specific distinction

Avoid:

- generic terracotta décor
- glossy ceramic finish

resin-like surfaces
fantasy sculpture drift
paint-heavy toy styling
a generic world with one terracotta accent

Image-to-Image

Convert this source image into a creative 2D + 3D Asharikandi terracotta translation from Assam.

Preserve the source image's main object structure, subject count, and readability, but reconstruct the full image through Asharikandi fired-clay grammar. Replace ordinary materials with fired red-brown terracotta body. Replace smooth synthetic surfaces with matte earthen clay tactility. Replace realism-first figure logic with typological handcrafted object presence.

Allow the image to become more spatial and visually rich than a strict documentary craft image, but keep every visible element rooted in Asharikandi terracotta intelligence. If the source contains figures, animals, dolls, idols, or vessels, make them feel hand-shaped from local clay and fired into durable earthen objects. If Hatima doll, Ainar horse, elephant, rhino, or deity forms are relevant, preserve their village-specific object identity rather than drifting into generic clay figurines.

Extend the style beyond the main object. Supporting forms, shelves, workspaces, grouped objects, and environment should all inherit terracotta-world logic so the image feels authored by the Asharikandi craft cluster rather than decorated with clay texture.

Do not turn it into generic folk pottery, polished ceramics, clay toy art, or fantasy sculpture. Rebuild the full image so it feels generated by Asharikandi terracotta grammar.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the Asharikandi terracotta tradition of Assam. Treat this as a distinct fired-clay craft system from the Asharikandi–Madaikhali village cluster of Dhubri, not as generic terracotta realism, not as ceramic décor styling, and not as fantasy clay sculpture.

The realism must remain fully governed by Asharikandi terracotta grammar. Build the world through local Hiramati-clay object mass, clay mixed with sand and ash, fired earthen red-brown body, matte terracotta tactility, handmade contour logic, clay-built figure and vessel presence, and village-craft identity. Every important form must still feel like it comes from actual terracotta practice rather than from industrial ceramics or polished sculpting.

If figurative or iconic forms appear, they must remain Asharikandi-specific in object logic: Hatima doll, Ainar horse, elephant, rhino, deity figures, and other village-cluster terracotta forms should read as handcrafted fired-clay objects with typological presence, not as realism-first sculpture. The whole frame must belong to one terracotta world.

Use believable dimensional depth, light on earthen surfaces, object weight, grouped pottery/figurine realism, and fuller workshop or craft-environment completion where relevant, but keep the handmade fired-clay identity stronger than generic realism. The scene should feel like Asharikandi terracotta culture became dimensional reality while preserving matte earthiness and village craft memory.

Do not make it glossy ceramic. Do not make it resin or stone sculpture. Do not make it toy-like or fantasy-like. Do not make it a generic rustic room with clay accents. Every important element must still belong to the Asharikandi terracotta system.

Reusable Variable Template

Create [SUBJECT / OBJECT / SCENE / WORLD TYPE] as a full 3D realistic dimensional world generated from the Asharikandi terracotta tradition of Assam.

Style system that must remain unchanged:

Asharikandi village-cluster identity

Hiramati-clay memory

local fired-clay object mass

earthy red-brown matte terracotta body

handmade contour logic

typological handcrafted figure/object presence

pottery-and-figurine craft ecology

whole-frame Asharikandi consistency

Translate the world like this:

[MAIN OBJECT / MAIN FIGURE] becomes a fully dimensional Asharikandi terracotta presence

[SECONDARY FORMS] become volumetric but still handcrafted fired-clay objects

[SURFACE / DETAIL AREAS] remain matte, earthen, and terracotta-specific

[ENVIRONMENT] becomes a believable craft-world space organized by Asharikandi clay intelligence rather than generic rustic realism

Increase:

believable object depth

light on fired clay

surface tactility

grouped clay-object coherence

village terracotta environment completion

Do not lose:
fired clay identity
matte earthen finish
handmade irregularity
Asharikandi-specific object logic
terracotta-first world structure

Avoid:
generic terracotta realism
glossy ceramic finish
resin-like surfaces
fantasy clay sculpture
toy-art exaggeration
a generic realistic scene with one terracotta object inserted

Image-to-Image

Convert this source image into a full 3D realistic Asharikandi terracotta world from Assam.

Preserve the source image's main composition, core action or object order, and readability, but rebuild all visible forms through Asharikandi fired-clay grammar. Replace ordinary surfaces with matte earthen terracotta body. Replace smooth industrial or synthetic materials with handmade fired-clay tactility. Replace realism-first sculptural behavior with typological handcrafted object presence grounded in village terracotta logic.

If the image contains animals, dolls, deity forms, ritual objects, or pottery vessels, make them feel like authentic Asharikandi terracotta creations shaped from Hiramati clay mixed with sand and ash, then dried and fired into durable earthen forms. If Hatima doll, Ainar horse, elephant, rhino, or related object families are relevant, preserve their village-specific identity instead of drifting into generic clay craft.

Extend the style beyond one object. Supporting surfaces, shelves, workspaces, grouped display areas, and environmental cues must all feel generated by Asharikandi terracotta culture so the full world belongs to one fired-clay system. The final result should feel like the Asharikandi craft cluster became dimensional reality.

Do not paste terracotta color onto another sculptural system. Do not turn it into polished ceramics, resin objects, or generic clay décor. Rebuild the whole image so it feels authored by Asharikandi terracotta grammar.
