

Bastar Dhokra -Chhattisgarh

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful visual logic of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh**. Treat this as a **lost-wax cast object tradition**, not as generic tribal brass décor, forged metal art, polished luxury metalwork, or smooth gallery sculpture. Build the image as if it comes from a real Bastar Dhokra craft world shaped by **wax modeling, wax-thread buildup, earthen mold construction, molten bell-metal or brass-family casting, and hand-finished break-the-mold individuality**.

The image must read **object-first**. The form must feel like it was first built in wax and then cast in metal. Preserve the sense of **hand-built structure, rhythmic wax-wire detailing, cast-object silhouette, earthen mold ancestry, and non-industrial uniqueness**. The object should feel materially rooted in **wax, earth, and fire**, not just “metallic.”

Use the native Bastar Dhokra object world: **local deities, ritual figures, horses, elephants, birds, Nandi, lamps, bells, ornaments, containers, incense holders, and domestic or ceremonial metal objects**. Human and animal forms must remain **iconic cast presences**, not realism-first figures. Surface detailing should grow out of the structure as if formed through wax-thread application before casting, not engraved later or printed on top.

Material behavior must preserve **bell-metal / brass-family cast truth**: warm cast-metal presence, handmade irregularity, slight process-born variation, matte-to-soft sheen rather than chrome gloss, and visible memory of hand finishing. Composition must remain object-centered and silhouette-led. Ornament must remain structural, built into the object through wax-borne rhythm rather than surface garnish.

Do not make this generic tribal brass décor, machine-made brass figurine, forged or carved metal sculpture, polished showroom artifact, bronze realism, or tribal motifs added onto ordinary metal objects. Do not lose the lost-wax process memory. Do not lose earthen mold ancestry. Do not let realism or polish overpower cast-object truth.

Reusable Variable Template

Create [SUBJECT / OBJECT / FIGURE / RITUAL OR DOMESTIC FORM] in the **authentic source-faithful visual logic of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh**.

Treat the style as a **lost-wax cast object system** built from:

- wax-modeled form
- wax wires / wax-thread structural buildup
- earthen core and mold construction
- molten bell-metal or brass-family casting
- hand-finished break-the-mold individuality
- object-first silhouette logic
- Bastar ritual-domestic symbolic object culture

Preserve these non-negotiable style rules:

- the result must feel cast, not forged, carved, stamped, or machine-made
- the form must feel first modeled in wax
- the surface must feel structurally built, not decorated afterward
- the metal must feel warm, handcrafted, and process-born
- the object must remain stronger than the environment around it
- the subject must belong to Bastar's ritual-domestic world
- the whole image must behave like a Bastar Dhokra object field

Translate the subject like this:

- **[MAIN OBJECT / MAIN FIGURE]** becomes the dominant lost-wax cast Bastar Dhokra form
- **[SECONDARY OBJECTS / SUPPORTING FIGURES / ANIMALS / RITUAL ELEMENTS]** become subordinate cast forms with the same wax-built logic
- **[SURFACE DETAIL]** becomes wax-wire rhythm, coiled structure, cast relief, and hand-built ornament
- **[SUPPORT SPACE / CONTEXT]** remains minimal and subordinate, only enough to strengthen object truth

Keep:

- lost-wax cast identity
- wax-built structure
- earthen mold ancestry
- hand-cast individuality
- ritual-domestic Bastar object logic
- warm bell-metal / brass-family material truth

Avoid:

- generic brass décor
- industrial precision
- smooth luxury finish
- forged / carved metal look
- realism-first sculpture
- tribal motifs added later

Image-to-Image

Convert this source image into the **authentic source-faithful visual logic of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh**.

Preserve the source image's **subject count, main object relationships, pose logic, silhouette logic, and overall readability**, but rebuild the entire image as a **lost-wax cast Bastar object system**. Replace ordinary surfaces and forms with **wax-modeled structure, wax-wire buildup, earthen mold ancestry, bell-metal / brass-family cast material, and hand-finished process-born detailing**.

If the source contains human or animal figures, rebuild them as **iconic cast presences** rather than realism-first bodies. If it contains lamps, bells, ornaments, ritual forms, or containers, reconstruct them as true Bastar Dhokra objects, not as ordinary metal products. If the source contains background or setting, it must stay subordinate to the cast object so the whole image still feels generated by Bastar Dhokra object intelligence.

Do not simply make the image metallic. Do not add wire patterns to a normal brass object. Do not turn it into generic tribal metal décor or a polished brass souvenir. The final result must feel like the source image has been fully rebuilt through authentic Bastar Dhokra lost-wax casting logic.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic handcrafted dimensional visual logic of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh**. Keep the full source grammar intact, but translate it into a richer handcrafted dimensional object-world. This version must still feel completely **lost-wax cast and object-born**, not realism-born and not decorative brass styling.

Preserve the full source grammar: **wax modeling, wax-thread or wax-wire buildup, earthen mold construction from soil and organic materials, bell-metal or brass-family casting, hand finishing, and Bastar ritual-domestic object identity**. Then allow the object to become more tactile, more materially present, and more spatially articulated while still remaining unmistakably Bastar Dhokra.

The form must still feel first built in wax. The surface must still feel like cast relief, modeled rhythm, and handmade patterning grown out of structure. The object may gain more depth, more thickness, stronger edge presence, and richer material-light interaction, but it must still remain **cast-object truth first**. Human and animal forms must still read as **iconic cast figures**, not realism-based sculpture. Lamps, bells, ornaments, and vessels must still remain process-born artifacts, not designed products.

Material behavior should preserve a warm cast-metal body with subtle hand irregularity, softened sheen, tactile relief, and visible process-memory. Ornament must remain structural and integrated. Composition must still remain object-centered, silhouette-led, and process-aware.

Do not make this a polished artisan brass render, gallery-product shot, decorative 3D metal illustration, or realism-first sculpture. Do not let dimensionality erase wax ancestry, earthen mold memory, or hand-cast individuality.

Reusable Variable Template

Create **[SUBJECT / OBJECT / FIGURE / RITUAL OR DOMESTIC FORM]** in the **authentic handcrafted dimensional visual logic of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh**.

Treat the style as a **lost-wax cast object system** and translate it into a richer handcrafted dimensional world while preserving these non-negotiable rules:

- the form still feels wax-built before casting
- the object still feels hand-cast, not industrial
- earthen mold ancestry remains visible in spirit
- surface rhythm still grows from structure
- the object still belongs to Bastar's ritual-domestic symbolic world
- the environment remains secondary to object truth
- the whole image remains object-first, not realism-first

Translate the subject like this:

- **[MAIN OBJECT / MAIN FIGURE]** becomes a richer tactile Bastar Dhokra cast form
- **[SECONDARY OBJECTS / SUPPORTING FIGURES / ANIMALS / RITUAL ELEMENTS]** become subordinate cast presences with matching structural logic
- **[SURFACE DETAIL]** becomes dimensional wax-wire buildup, cast relief, looped and rhythmic modeled ornament
- **[SUPPORT SPACE / CONTEXT]** becomes a restrained field that strengthens handcrafted object presence

Let these become richer:

- cast surface relief
- wax-thread depth
- object weight and thickness
- metal-light interaction
- handcrafted detail legibility
- spatial object presence

Keep unchanged:

- lost-wax cast identity
- wax-built structure
- earthen mold memory
- hand-cast individuality
- Bastar object-world logic

Avoid:

- polished décor rendering
- machine-clean metal
- decorative brass product styling
- realism-first anatomy
- generic artisan metal aesthetic
- environment overpowering the object

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional visual logic of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh**.

Preserve the source image's **main object relationships, silhouette, pose logic, and readability**, but rebuild the full image through a **dimensional lost-wax Bastar cast system**. Replace ordinary material behavior with **wax-modeled structure, wax-thread buildup, earthen mold ancestry, cast bell-metal or brass-family surface, and hand-finished rhythmic detailing**.

Allow the image to gain richer tactile depth, stronger cast relief, more visible material weight, and more dimensional object presence than the source-faithful version, but keep the style fully object-first. Every figure, animal, lamp, bell, ornament, or vessel must still feel like a Bastar Dhokra cast artifact rather than a realism-first object with tribal styling.

Do not metallic-texture a normal object and call it done. Do not turn the scene into decorative brass craft illustration or product-design rendering. The final result must feel like the source image has been rebuilt through a handcrafted dimensional Bastar Dhokra cast intelligence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic translation of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh**. Convert the complete source grammar into a believable three-dimensional world while keeping **Bastar lost-wax intelligence** in control. This must

not become generic brass realism, decorative tribal metal décor, or fantasy metal sculpture. It must feel like a **Bastar Dhokra cast-object world became real**.

Keep the full source grammar intact: **wax modeling, wax wires or wax-thread buildup, earthen mold construction using soil, paddy husk, cow dung, clay, and related organic-earth materials, bell-metal or brass-family casting, hand finishing, and Bastar ritual-domestic object identity**. Then translate that grammar into full volume: stronger cast mass, richer spatial staging, clearer figure-ground separation, deeper object-world coherence, and cinematic readability — but only under the authority of the lost-wax cast system.

Preserve the origin-material memory. By default, render the world as if it grows directly out of **beeswax or wax-modeled form, wax-wire structural buildup, earthen mold materials, molten cast brass or bell-metal, and broken-mold individuality**. Even in full 3D, the world must still visibly remember **wax, earth, and fire**. The result must not become smooth CGI brass, polished luxury metal décor, generic bronze realism, or fantasy metallic world-building. It must still feel like a **process-born cast-object world**.

The object must still govern the scene. Deities, horses, elephants, birds, lamps, bells, jewelry, incense holders, and containers must still behave as **Bastar cast presences**, not as ordinary realistic props. The world must not merely host the style; the world must feel generated by the style's lost-wax object intelligence.

Do not create generic tribal brass décor, showroom metal styling, cinematic bronze realism, fantasy temple metalwork, glossy product-shot aesthetics, or ordinary realism with tribal motifs added later. Do not let polish replace process. Do not erase earthen mold ancestry. Do not let environment overpower the object.

Reusable Variable Template

Create **[SUBJECT / OBJECT WORLD / FIGURE / RITUAL OR DOMESTIC FORM]** as a **fully volumetric cinematic translation of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh**.

Treat the style as a **lost-wax cast object system** and translate it into a believable three-dimensional world without losing these non-negotiable rules:

- the form still feels first modeled in wax
- wax-wire structure remains active in the final image
- earthen mold ancestry remains visible in material memory
- the object still feels hand-cast and individually made
- the subject still belongs to Bastar ritual-domestic object culture
- the object remains stronger than the environment around it
- the whole frame remains governed by cast-object intelligence

Material-origin rule:

- default to **wax + earthen mold + molten metal origin memory**
- preserve beeswax or wax-modeled structure, wax-wire buildup, soil / paddy husk / cow dung / clay mold ancestry, bell-metal or brass-family cast surface, and broken-mold individuality
- keep the metal warm, tactile, process-born, and non-industrial
- even in full 3D, the world must still feel **born from lost-wax casting**, not from product design or fantasy metal styling

Translate the subject like this:

- **[MAIN OBJECT / MAIN FIGURE]** becomes the dominant volumetric Bastar Dhokra cast presence
- **[SECONDARY OBJECTS / SUPPORTING FIGURES / ANIMALS / RITUAL ELEMENTS]** become subordinate cast forms with matching process-born logic
- **[SURFACE DETAIL]** becomes volumetric wax-thread rhythm, cast relief, looped structure, and hand-finished metal articulation
- **[ENVIRONMENT / SUPPORT SPACE]** becomes a cinematic but still object-governed Bastar cast world

Increase:

- object volume and weight
- figure-ground separation
- metal-light interaction
- cast relief and depth
- spatial readability
- world-scale object coherence

Do not lose:

- lost-wax cast identity
- wax-built structure
- earthen mold ancestry
- hand-cast individuality
- Bastar ritual-domestic object logic
- process-memory stronger than polish

Avoid:

- generic brass realism
- decorative tribal metal styling
- showroom luxury finish
- fantasy metal environment
- polished CGI brass
- realism overpowering cast-object truth

Image-to-Image

Convert this source image into a **fully volumetric cinematic translation of Bastar Dhokra / Bastar Bell Metal Craft from Chhattisgarh.**

Preserve the source image's **subject count, main object relationships, silhouette logic, pose logic, and scene readability**, but rebuild the entire frame as if **Bastar lost-wax cast grammar became a cinematic three-dimensional world**. Replace ordinary material and object logic with **wax-modeled structure, wax-wire buildup, earthen mold ancestry, cast bell-metal or brass-family surface, hand-finished irregularity, and Bastar ritual-domestic object intelligence**.

Then expand that structure into full volume: stronger object mass, richer surface relief, clearer spatial staging, deeper material-light interaction, and fuller world completion. But every part of the frame must still obey Bastar Dhokra law. The object must remain object-first. The surface must still feel process-born. The world must still read as a cast-object world made real, not as ordinary realism with tribal metal added later.

Do not simply turn the source image into brass. Do not add wire-like ornament to a normal object. Do not make it fantasy bronze cinema or polished metal décor. Do not lose the origin-material memory of **wax, earth, and molten cast metal**.

The final image must feel like the source image has been fully rebuilt through **fully volumetric Bastar Dhokra intelligence with process-memory, object-truth, and ritual-domestic meaning all intact**.
