

Bhagalpur silk -bihar

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic source-faithful visual logic of **Bhagalpur Silk from Bihar**, specifically the **Bhagalpur handloom silk tradition** rooted in **tussar-led silk weaving, local yarn preparation, handloom structure, and region-specific finishing methods**. Treat this as a **woven silk textile system**, not as generic luxury silk, not as satin glamour fabric, not as motif-first decorative cloth, and not as printed faux-silk.

Build the whole image as if it comes from a real Bhagalpur silk weaving-and-finishing ecosystem. The textile must feel **woven first**, not decorated first. Let the fabric carry a strong sense of **handloom body, silk lustre, airy robustness, and graceful drape**. The sheen should feel like real silk glow, not plastic shine. The surface should show woven character and textile integrity rather than flat print behavior.

Material logic: the cloth must remember **tussar-like regional silk character**, local weaving skill, and hand-finished refinement. Let the fabric feel light yet substantial, soft yet structured, and elegant without becoming over-polished or synthetic. It should feel like a fabric that has passed through a real process chain of silk preparation, spinning, weaving, washing, pressing, and finish refinement.

Product logic: if the textile appears as a saree, stole, dupatta, kurta fabric, scarf, angavastra, or home textile, it must still remain clearly Bhagalpur silk in material behavior. The cloth should fall naturally, hold form with dignity, and carry a usable textile presence rather than behaving like costume fantasy fabric.

Surface logic: pattern or motif may be minimal or absent. Bhagalpur silk does not require heavy decoration to be itself. Even when secondary design appears, the woven silk base must remain stronger than any printed or painted content. The viewer should recognize the fabric through **weave, finish, fall, and sheen**, not only through ornament.

Do not make this generic premium silk, synthetic satin, glossy fashion-catalog fabric, embroidered silk mistaken for Bhagalpur silk, or printed decorative cloth with luxury styling. The final image must feel like true Bhagalpur silk from Bihar: **woven, handloom-bodied, lustrous, airy, robust, and regionally process-specific**.

Reusable Variable Template

Create **[SUBJECT / PRODUCT / SCENE]** in the authentic source-faithful visual logic of **Bhagalpur Silk from Bihar**, treating it as a **Bhagalpur-centered woven silk textile system** rather than generic luxury silk.

Core style system to preserve:

- handloom-woven silk identity
- Bhagalpur regional cluster memory
- tussar-led material character
- real woven body and textile structure
- silk lustre with restraint, not synthetic gloss
- airy yet robust texture
- drape and fall suitable for real textile use
- finish-aware cloth surface
- whole-textile coherence

Translate the subject like this:

[MAIN TEXTILE FORM] becomes a real Bhagalpur silk product with woven body and authentic drape

[SURFACE CHARACTER] shows silk lustre, texture, and finish without losing weave identity

[FOLD / FALL / MOVEMENT] remains graceful, airy, and believable for handloom silk

[SECONDARY DESIGN OR MOTIF IF ANY] stays subordinate to the woven silk base

[OVERALL TONE] feels refined, regionally authentic, handloom-based, and materially specific rather than generically luxurious

Keep:

- woven-first logic
- Bhagalpur silk identity
- tussar/material memory
- handloom body
- real silk lustre
- finish-aware texture
- product-use truth
- whole-textile coherence

Avoid:

- generic luxury silk
- synthetic satin shine
- printed faux-silk
- motif-first decoration
- embroidered or appliquéd logic taking over
- fashion-only glamour with no regional textile identity
- surface richness hiding the weave

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Bhagalpur Silk from Bihar**.

Preserve the source image's main textile form, basic composition, and core readability, but rebuild the fabric through **Bhagalpur silk weaving logic**. Replace any generic luxury-fabric behavior, synthetic shine, flat print look, or support-neutral textile rendering with a real sense of **handloom silk body, tussar-like regional character, airy robustness, and dignified drape**.

If the source image contains a saree, stole, dupatta, scarf, kurta fabric, angavastra, or furnishing textile, make it behave like actual Bhagalpur silk rather than generic silk. Let the cloth show woven presence, finish intelligence, and region-specific silk refinement. If motifs are present, keep them secondary to the textile base. If folds or movement are present, make them textile-real and handloom-believable.

Do not simply add silk gloss. Do not keep another fabric grammar underneath. Do not turn the textile into generic premium silk. Rebuild the whole fabric so it feels as if the source image originally emerged from the Bhagalpur silk tradition of Bihar: **woven, handloom-based, lustrous, airy, robust, and process-aware**.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative **2D + 3D translation** rooted in the visual grammar of **Bhagalpur Silk from Bihar**, but keep the style source-faithful at its structural core. This must not become generic high-fashion silk, generic handloom luxury, or motif-heavy decorative fabric. It should feel like authentic Bhagalpur silk intelligence expanding into a richer textile world while still remaining **woven-first, drape-first, finish-aware, and regionally specific**.

Keep the native Bhagalpur silk engine intact: **silk-yarn preparation memory, handloom weave structure, tussar-led material behavior, airy robustness, restrained silk lustre, and local finish identity**. Then allow a controlled creative expansion where the cloth gains richer surface depth, stronger relation between weave and sheen, more articulated folds, and more expressive product-world presence. Depth may appear only as **woven textile depth, fold layering, silk body, and finish-rich surface life**, never as generic luxury glamour.

Material logic: the cloth should look more alive and tactile than in the strict source-faithful version, but it must still remain unmistakably Bhagalpur silk. Let the fabric show subtle complexity in texture and finish. The sheen must still be silk-specific and handloom-compatible. The cloth should feel refined through process, not through artificial polish.

Product logic: the textile may appear in richer, more expressive saree, dupatta, stole, kurta, scarf, angavastra, or furnishing presentations, but it must stay real and usable. The folds should feel lived in by the textile, not staged only for glamour.

Surface logic: if secondary motifs or design treatment appear, they must remain subordinate to Bhagalpur silk's woven identity. The viewer should still read **weave, yarn, finish, and drape** before reading ornament.

Do not make this into generic premium silk fantasy, surface-luxury fashion fabric, glossy catalog styling, or decorated silk with no Bhagalpur body. The final image must feel like Bhagalpur silk creatively expanded while still remaining true to **handloom silk structure, tussar memory, and local finish-based refinement**.

Reusable Variable Template

Create **[SUBJECT / PRODUCT / SCENE]** as a creative **2D + 3D translation** rooted in the visual grammar of **Bhagalpur Silk from Bihar**.

Preserve these style-core rules:

- woven silk remains primary
- Bhagalpur regional identity remains active
- tussar-led material character remains visible
- handloom body remains stronger than decorative surface
- lustre remains silk-specific and restrained
- drape remains airy and real
- finish remains locally intelligent rather than generic gloss
- whole-textile coherence remains intact

Translate the subject like this:

[MAIN TEXTILE FORM] becomes a richer Bhagalpur silk textile presence with stronger fabric life

[SURFACE / WEAVE / SHEEN] becomes more articulated while still clearly woven and silk-based

[FOLD / FALL / MOVEMENT] becomes more expressive but remains handloom-believable

[SECONDARY DESIGN / MOTIF IF ANY] stays integrated into the textile rather than overpowering it

[OVERALL TONE] feels refined, region-specific, tactile, and materially rich without becoming generic luxury silk

Let these become richer:

- woven texture depth
- silk body
- surface finish complexity
- fold articulation
- product presence
- material tactility

Keep unchanged:

- woven-first logic
- Bhagalpur silk identity
- tussar/material memory
- real drape
- finish-specific cloth behavior
- whole-textile coherence

Avoid:

- generic premium silk styling
- synthetic gloss
- print-led decorative logic
- motif dominance
- embroidery/appliqué takeover
- fashion-catalog luxury without Bhagalpur process memory
- surface beauty replacing textile truth

Image-to-Image

Convert this source image into a creative **2D + 3D Bhagalpur Silk translation** rooted in the Bihar handloom silk tradition.

Preserve the source image's textile form, main action of the cloth, and overall product readability, but reconstruct all visible fabric behavior through **Bhagalpur silk weaving logic**. The image must no longer behave like generic luxury silk, satin, or fashion fabric. Rebuild it through **woven silk body, tussar-like character, airy robustness, refined finish, silk lustre, and believable handloom drape**.

If the source image contains a saree, stole, dupatta, kurta fabric, scarf, angavastra, or furnishing textile, make it feel fully Bhagalpur in body and finish. Let the cloth become richer in tactile presence, fold-depth, and woven refinement, but keep the product usable and real. If decorative treatment exists, integrate it into the textile rather than letting it dominate the fabric identity.

Do not simply add premium silk shine. Do not keep another fabric grammar underneath. Do not turn the image into generic luxury handloom. Rebuild the whole textile so it feels as if the source image naturally expanded into a richer Bhagalpur silk world while preserving regional handloom structure, tussar memory, and finish intelligence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable **full 3D dimensional world** generated from the visual grammar of **Bhagalpur Silk from Bihar**, but keep the world governed by Bhagalpur silk structure rather than by generic realism or luxury-fashion styling. This is not a realistic silk fabric with prestige added later. It is a fully dimensional textile world in which **handloom-woven silk structure, Bhagalpur regional process memory, tussar-led material character, local finishing intelligence, airy robustness, dignified drape, and silk-specific lustre** have become reality.

Convert the entire style system into dimensional form without losing its laws. The textile must still feel woven, not printed or synthetically finished. The cloth must still feel region-specific, not generic premium silk. The surface may become materially convincing, but it must still show handloom body, yarn life, finish depth, and believable silk movement.

World logic: the fabric must behave as real Bhagalpur silk in a fully dimensional space. Sarees, dupattas, stoles, kurtas, scarves, angavastras, and home textiles should all feel naturally inhabitable by this material system. The textile should move, fold, hold, gather, and reflect light in ways that preserve both **silk lustre and woven structure**.

Material logic: let the weave, yarn density, finish quality, fold memory, and surface response to light become richly believable. The texture should remain airy yet robust, not slick, plasticky, or limp. Use realism only to strengthen Bhagalpur's material truth, not to replace it with generic silk glamour.

Surface and motif logic: if secondary motiving appears, it must remain clearly subordinate to the fabric base. The fabric should still be read through its **woven identity, drape, finish, and regional silk behavior** first.

Do not create generic fashion-advertisement silk, synthetic satin realism, over-polished premium fabric, print-first decorative cloth, or motif-dominant silk that forgets Bhagalpur's woven core. The final image must feel like a fully dimensional Bhagalpur silk universe: **handloom-woven, regionally process-specific, airy, robust, lustrous, and drape-true**.

Reusable Variable Template

Create **[SUBJECT / PRODUCT / SCENE]** as a believable **full 3D dimensional world** generated from the visual grammar of **Bhagalpur Silk from Bihar**.

Style system that must remain unchanged:

woven silk remains the primary identity

Bhagalpur regional process memory remains active

tussar-led material character remains visible

handloom body remains stronger than surface glamour

lustre remains silk-specific, not synthetic

finish remains refined but real

drape remains airy, robust, and product-true

the whole textile belongs to one Bhagalpur silk world

Translate the subject like this:

[MAIN TEXTILE FORM] becomes a fully dimensional Bhagalpur silk product with woven realism and regional material truth

[SURFACE / WEAVE / FINISH] becomes tactile, finish-rich, and silk-specific without losing handloom identity

[FOLD / FALL / MOVEMENT] becomes fully realistic but remains true to airy robust Bhagalpur silk behavior

[SECONDARY DESIGN / MOTIF IF ANY] stays subordinate to the woven silk base

[OVERALL TONE] feels refined, regionally authentic, materially convincing, and dignified rather than generically luxurious

Increase:

woven tactility

silk body

finish realism

fold truth

drape realism

regional textile presence

Do not lose:

Bhagalpur handloom identity

tussar/material memory

real weave behavior

silk lustre with body

finish-specific intelligence

whole-textile coherence

Avoid:

generic luxury silk realism

synthetic satin look

surface shine without woven body

print-led decorative cloth

motif dominance over textile base

fashion-glamour silk from nowhere

any fabric that forgets Bhagalpur's weaving-and-finish ecosystem

Image-to-Image

Convert this source image into a believable **full 3D Bhagalpur Silk world** generated from the Bihar handloom silk tradition.

Preserve the source image's textile form, overall product logic, and main compositional readability, but rebuild every major fabric behavior through **Bhagalpur silk weaving-and-finish logic**. Replace generic silk, satin, fashion-fabric, or synthetic luxury behavior with a fully coherent textile world of **handloom woven structure, tussar-like**

material memory, local finish refinement, airy robustness, silk lustre, and believable drape.

If the source image contains a saree, stole, dupatta, kurta fabric, scarf, angavastra, or furnishing textile, make it fully dimensional but still unmistakably Bhagalpur in body and finish. If motifs are present, keep them secondary to the fabric base. If folds are present, make them show woven silk truth rather than generic glamour styling.

Do not merely add realism to a generic silk image. Do not keep another fabric grammar underneath. Do not make it fashion-catalog silk with regional naming. Rebuild the whole textile so it feels as if the source image originally emerged from a fully dimensional Bhagalpur silk universe: **woven, handloom-bodied, regionally process-specific, lustrous, airy, robust, and drape-true.**
