

Khatwa, applique - Bihar

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic source-faithful visual logic of **Khatwa appliqué from Bihar**, specifically the **cut-cloth textile tradition** in which **colored fabric shapes are traced, cut, and stitched onto a contrasting base cloth**. Treat this as a **cloth-built appliqué system**, not as generic patchwork, not as embroidery-first textile art, not as painted Mithila imagery transferred onto fabric, and not as printed textile design.

Build the whole image as if it is genuinely assembled from **fabric pieces attached to a base fabric**. The image must feel made from cloth first. Use **bold cuttable silhouettes**, **clear contrast between appliqué cloth and base cloth**, **stitched attachment logic**, and a **textile field that remains active through cloth color and fabric placement**, not through drawing, shading, or print effects. Let the image remember the older Khatwa tradition of **shamianas, decorative tents, canopies, and festive cloth use**, while still being valid for household cloth surfaces.

Figure logic: if people, birds, animals, trees, flowers, or domestic scenes appear, they must feel **cut from cloth and applied to cloth**, not drawn and then textured later. Faces should be simplified and silhouette-led. Bodies must feel shape-first, not anatomy-first. Every figure must remain bold enough to read from distance and clear enough to hold together up close.

Material logic: the cloth should feel soft, layered, stitched, and handmade. The seam should support the shape, not replace it. The base cloth must remain visually important; it is not empty background. Strong contrast should do major structural work, including older Khatwa-like contrast memory such as **light appliqué on strong warm grounds** where appropriate.

Narrative and decorative logic: the scene may include celebratory, domestic, symbolic, floral, animal, or intimate social content, but it must still be assembled through cut-cloth composition. The whole textile should feel like **appliquéd storytelling or decorative arrangement through fabric**, not illustration on fabric.

Do not make this generic appliqué, generic patchwork, embroidery-dominant cloth art, painted cloth, printed fabric, or textile collage with no Bihar Khatwa logic. The final image must feel like true Khatwa from Bihar: **cut-cloth-built, contrast-driven, stitched, textile-first, and compositionally authored through fabric pieces**. Official sources consistently describe Khatwa through attached cloth patches, traced designs, and ceremonial/domestic textile use.

Reusable Variable Template

Create **[SUBJECT / SCENE]** in the authentic source-faithful visual logic of **Khatwa appliqué from Bihar**, treating it as a **cut-cloth textile composition system** rather than generic patchwork or embroidery.

Core style system to preserve:

- cut contrasting cloth shapes attached to a base cloth
- shape-first image logic
- clear base-versus-appliqué contrast
- stitched attachment as structural necessity
- ceremonial shamiana / canopy / cloth-memory
- women-led color and theme selection memory
- bold readability across distance and close view
- whole-surface cloth coherence

Translate the scene like this:

[MAIN FIGURE / MAIN EVENT] becomes a Khatwa-built cloth shape composition rather than a drawn image

[SECONDARY FIGURES / ANIMALS / TREES / FLOWERS / OBJECTS] become supporting cut-cloth silhouettes attached to the same base fabric

[BACKGROUND / BASE FIELD] remains active as base cloth, not dead empty space

[BORDER / EDGE TREATMENT] stays textile-aware and appliqué-compatible

[COLOR RELATION] is driven by contrast between upper cloth and foundation cloth rather than painted shading

[SCENE TONE] may lean toward festive, ceremonial, domestic, decorative, narrative, or intimate social life, but must remain structurally Khatwa

Keep:

- cut-cloth assembly
- base/appliqué contrast
- textile-first image world
- stitched attachment logic
- canopy and household cloth memory
- cloth-authored storytelling
- whole-surface fabric coherence

Avoid:

- generic appliqué from anywhere
- generic patchwork collage
- embroidery-first drawing
- printed textile look
- painted Mithila imagery on cloth
- realism-first figures
- decorative fabric arrangement with no real cut-cloth structure

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Khatwa appliqué from Bihar**.

Preserve the source image's subject count, main action, and readable scene structure, but rebuild the entire image through **cut-cloth appliqué logic**. Replace drawn or painted forms with **fabric shapes traced, cut, and stitched onto a contrasting base cloth**. Replace scenic or neutral background with an active **foundation textile** that visibly participates in the design through color and contrast. Every major figure, object, tree, flower, bird, or decorative form must feel like an appliquéd cloth piece, not an illustrated element with fabric texture applied afterward.

If the source image contains people or domestic scenes, simplify them into **bold cloth-compatible silhouettes**. If it contains ornamental or symbolic forms, rebuild them through appliqué shape logic. If it contains empty space, convert that into meaningful base-cloth presence rather than leaving it like paper or canvas background.

Do not overlay patchwork texture on a normal image. Do not keep painting structure underneath. Do not turn it into generic textile collage or print imitation. Rebuild the whole image so it feels as if the source scene was originally conceived as a real Bihar Khatwa textile: **cut from cloth, attached to cloth, contrast-driven, stitched, and compositionally held by the base fabric**. Khatwa's defining features in official sources are traced patterns, cut fabric pieces, stitched application, and strong textile use across ceremonial and domestic objects.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative **2D + 3D translation** rooted in the visual grammar of **Khatwa appliqué from Bihar**, but keep the style source-faithful at its structural core. This must not become generic textile collage, generic decorative patchwork, embroidery-dominant craft, or painting disguised as fabric. It should feel like authentic Bihar Khatwa intelligence expanding into a richer cloth-image system while still remaining **cut-cloth-built, base-contrast-driven, and textile-first**.

Keep the native Khatwa engine intact: **cut fabric shapes, stitched attachment, strong base-versus-appliqué contrast, ceremonial shamiana memory, domestic-cloth use memory, and women-led compositional storytelling**. Then allow a controlled creative expansion where the image gains more layered cloth depth, richer relation among shapes, stronger scene clustering, and a more articulated textile field. Depth may appear only as

fabric overlap, seam relief, cloth layering, patch thickness, fold memory, and textile spatial ordering, never as realism-first scene painting.

Figure logic: if figures appear, they must still feel **fabric-built**. Birds, animals, trees, flowers, and household scenes must remain cuttable and appliqué-compatible. Let the image become richer, but every form must still plausibly be a cloth piece attached to a foundation cloth.

Material logic: the textile may become more tactile and dimensional, but the work must still read as appliqué first. Show seam logic, fold edges, thickness differences, cloth overlap, and relief where useful, but do not let those details overpower silhouette clarity. The base cloth must still stay alive as a design partner.

Narrative and ceremonial logic: the image may carry stronger festive, domestic, symbolic, or story-like content, but it must still feel built from **assembled cloth composition**. The scene should feel like Bihar Khatwa expanding into a richer textile world without losing its roots in canopies, wall hangings, garments, and household textiles.

Do not make this into fashion illustration with patchwork texture, generic craft collage, printed folk textile, embroidery-led surface art, or painted fabric with appliqué accents. The final image must feel like Khatwa creatively expanded while still remaining true to **cut-cloth assembly, contrast structure, and Bihar textile memory**. Bihar craft and tourism sources consistently frame Khatwa as stitched fabric patches on a foundation cloth, with awalkhana planning and ceremonial/domestic textile uses.

Reusable Variable Template

Create **[SUBJECT / SCENE]** as a creative **2D + 3D translation** rooted in the visual grammar of **Khatwa appliqué from Bihar**.

Preserve these style-core rules:

- cut-cloth logic remains primary
- base cloth remains active and structurally visible
- appliqué shapes remain the main image units
- stitched attachment remains structural, not decorative embroidery
- ceremonial and domestic cloth memory remains possible
- women-led cloth composition remains legible
- whole-surface textile coherence remains intact

Translate the scene like this:

[MAIN FIGURE / MAIN EVENT] becomes a richer Khatwa cloth-built focal composition

[SECONDARY FIGURES / ANIMALS / TREES / FLOWERS / OBJECTS] become

supporting appliqué units with stronger layering and relation

[BACKGROUND / BASE FIELD] remains a living textile field that supports contrast and assembly

[DEPTH TREATMENT] may include overlap, patch thickness, seam relief, fold memory, and

cloth layering, but never realism-first painting

[COLOR RELATION] remains driven by cloth contrast, not painted shading

[SCENE TONE] may lean toward festive, ceremonial, narrative, domestic, symbolic, or intimate social life while staying structurally Khatwa

Let these become richer:

cloth relief

shape layering

scene grouping

material tactility

fabric depth

field organization

Keep unchanged:

cut-cloth image logic

base/appliqué contrast

textile-first world

stitched attachment

Bihar Khatwa identity

whole-surface cloth coherence

Avoid:

generic textile collage

patchwork print look

embroidery-dominant language

painted fabric logic

Mithila painting transferred onto cloth

fashion-surface styling with no appliqué structure

realism-led figures that are not cuttable

Image-to-Image

Convert this source image into a creative **2D + 3D Khatwa translation** rooted in the Bihar appliqué tradition.

Preserve the source image's subject count, major action, pose relationships, and overall readability, but reconstruct all visible forms through **Khatwa cut-cloth assembly logic**. The image must no longer behave like drawing or painting on fabric. Rebuild it through appliqué silhouettes, stitched attachment, base-versus-top-cloth contrast, layered fabric pieces, seam logic, and cloth relief. Let the result become richer than a strict flat appliqué sample by introducing stronger textile depth, overlap, patch thickness, and more articulated scene-building, while keeping the image fundamentally **cloth-built**.

If the source image contains people, birds, animals, trees, flowers, or domestic scenes, convert them into **bold appliqué-compatible forms** rather than illustrated figures. If it contains open space, make that space part of the active base cloth rather than leaving it as

empty background. If it contains symbolic or ceremonial content, let that be expressed through assembled fabric relations rather than through painted detail.

Do not paste patchwork texture onto a normal image. Do not keep another image grammar underneath. Do not make it generic craft collage. Rebuild the whole image so it feels as if the source scene naturally expanded into a richer Bihar Khatwa textile world while preserving cut-cloth logic, base contrast, and stitched assembly. Official sources support this approach because they describe Khatwa as traced patterns cut from colored cloth and attached to foundation cloth, often carrying scene-based themes.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable **full 3D dimensional world** generated from the visual grammar of **Khatwa appliqué from Bihar**, but keep the world governed by Khatwa structure rather than by ordinary realism. This is not a realistic scene with patchwork texture added later. It is a fully dimensional world in which **cut-cloth construction, base-versus-appliqué contrast, stitched attachment, ceremonial canopy memory, women-led cloth composition, and textile-first image logic** have become reality.

Convert the entire style system into dimensional form without losing its laws. Figures must still feel **cloth-built rather than drawn**, and every major element must still feel plausible as a fabric shape attached to a base textile. Birds, animals, trees, flowers, domestic scenes, celebratory cloth imagery, and symbolic motifs must all remain governed by appliqué logic. The world may become materially convincing, but it must still feel like it belongs to a tradition of assembled textiles rather than to painting or collage.

World logic: the environment must feel built from Khatwa intelligence. This does not mean literal flat quilts floating in space. It means every surface, figure, object, and interval of space must still behave as though formed through **foundation cloth plus attached cloth forms**. Layering, seam, edge fold, patch thickness, textile suspension, canopy spread, and furnishing-scale presence may all become dimensional, but the image must never stop feeling like appliqué.

Material logic: let fabric weight, fold, seam, patch edge, and textile layering become tactile and believable. Use depth, relief, and light only to strengthen the sense of real appliqué construction. Do not let realism erase silhouette clarity or make the work feel painted, printed, or embroidered-first.

Do not create generic realistic patchwork art, fashion-textile imagery with appliqué accents, collage realism, printed textile look, or painted Mithila scenes on fabric. The final image must feel like a fully dimensional Bihar Khatwa universe: **cut from cloth, attached to cloth, contrast-driven, stitched, and rooted in ceremonial and domestic textile life**. Khatwa's

official descriptions as stitched colored fabric patches on a base cloth, with continued canopy use and product adaptation, are the core guardrails here.

Reusable Variable Template

Create **[SUBJECT / SCENE]** as a believable **full 3D dimensional world** generated from the visual grammar of **Khatwa appliqué from Bihar**.

Style system that must remain unchanged:

- cut-cloth construction remains primary
- base cloth remains structurally active
- appliqué shapes remain meaningful and visible as assembled units
- stitched attachment remains believable
- ceremonial and domestic cloth memory remains active
- women-led compositional storytelling remains possible
- the whole frame belongs to one Khatwa cloth-world

Translate the scene like this:

[MAIN FIGURE / MAIN EVENT] becomes a fully dimensional Khatwa-built cloth composition

[SECONDARY FIGURES / ANIMALS / TREES / FLOWERS / OBJECTS] become volumetric but still cut-cloth-compatible appliqué units

[BACKGROUND / BASE FIELD] becomes a believable foundation textile with real structural presence

[MATERIAL TREATMENT] may include seam edges, fold memory, patch thickness, fabric weight, canopy drape, and textile relief

[DEPTH TREATMENT] may increase material realism and spatial presence, but must not erase appliqué logic

[SCENE TONE] may lean toward festive, ceremonial, decorative, domestic, narrative, or intimate social life while staying structurally Khatwa

Increase:

- fabric tactility
- patch thickness
- seam realism
- cloth relief
- canopy / furnishing presence
- textile-world coherence

Do not lose:

- cut-cloth logic
- base/appliqué contrast
- textile-first world
- stitched attachment
- Bihar Khatwa identity
- whole-surface cloth coherence

Avoid:

- generic realism with patchwork overlay
- printed textile illusion
- collage realism
- embroidery-first cloth art
- painted-cloth scene construction
- fashion-surface styling without canopy/domestic memory
- one appliqué-like object inside a non-Khatwa world

Image-to-Image

Convert this source image into a believable **full 3D Khatwa world** generated from the Bihar appliqué tradition.

Preserve the source image's subject count, core action, and main compositional readability, but rebuild every major element through **Khatwa cut-cloth logic**. Replace drawing, painting, print, or generic textile behavior with a fully coherent world of **foundation cloth, attached fabric shapes, stitched seams, base-versus-appliqué contrast, patch relief, and textile structure**. Every important figure, bird, animal, flower, tree, border, and gap must feel assembled from fabric pieces rather than illustrated or printed.

If the source image contains people or social scenes, turn them into **appliqué-built cloth compositions**. If it contains decorative motifs, make them structurally cuttable and textile-plausible. If it contains open space, convert that into active base-cloth presence rather than leaving it scenic or empty.

Do not merely add patchwork texture to a normal image. Do not keep another visual language underneath. Do not make it generic textile collage or fashion styling. Rebuild the whole image so it feels as if the source scene originally emerged from a fully dimensional Bihar Khatwa textile universe: **fabric-built, contrast-driven, stitched, and rooted in real appliqué construction**. Craft sources support this because Khatwa is explicitly defined by attached cloth patches on foundation fabric, with traced planning and strong use across ceremonial and domestic textiles.
