

Manjusha - Bihar

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic source-faithful visual logic of **Manjusha painting from the Ang/Bhagalpur region of Bihar**, rooted in the **Bihula-Bishahari ritual narrative tradition** and the memory of the **ceremonial Manjusha box**. Do not treat this as generic Bihar folk art, generic snake-themed painting, or a decorative mythology poster. Build the image as a **flat, bold, story-bearing painted field** where role-bearing characters, serpents, borders, and narrative structure are primary.

Use **strong enclosing contour lines**, a **restricted flat folk palette centered on pink, green, and yellow**, and a **flat pictorial perspective** rather than scenic realism. The figures should feel **iconic, graphic, and narratively clear**. Human characters should read as role-bearing units from the Bihula-Bishahari story cycle rather than as generic folk people. When figures are standing, traveling, or held in open display, let the body logic lean toward the traditional **spread-limb, X-like figure arrangement** where appropriate, while still allowing story-specific actions when needed. Serpents must remain active story symbols, not decorative wildlife.

The image must carry **serial story-memory** even if only one event is shown. It should feel like one scene from a longer ritual narrative sequence. Keep the background supportive and structured, not empty and not overloaded with unrelated decorative density. Borders should feel important and containing. The world should remember the **painted ritual box tradition**, devotional storytelling, and the Bhagalpur folk-graphic image system.

Do not use realistic anatomy, cinematic depth, atmospheric lighting, Madhubani-style all-over filler logic, generic goddess-poster composition, or modern illustration structure with Manjusha motifs pasted on top. The whole frame must feel born from Manjusha's ritual narrative system.

Reusable Variable Template

Create [SUBJECT / SCENE] in the authentic source-faithful visual logic of **Manjusha painting from Bhagalpur, Bihar**, treating it as a **flat ritual narrative image system** tied to the **Bihula-Bishahari serpent-goddess tradition** and the memory of the **ceremonial Manjusha box**.

Core style system to preserve:

strong bold contour linework

restricted flat palette centered on pink, green, and yellow

flat perspective and folk-graphic space
role-bearing narrative figures, not generic characters
serpent-goddess symbolic field
event readability stronger than decorative spread
serial story-memory even in a single image
border-aware containment and ceremonial structure
whole-frame consistency so every visible element belongs to the same Manjusha world

Translate the scene like this:

[MAIN FIGURE / MAIN EVENT] becomes a role-clear Manjusha narrative event from a larger story-chain

[SECONDARY FIGURES] become supporting characters with clear story function, not generic bystanders

[SNAKES / SERPENT FORMS] become active symbolic-narrative carriers tied to Bishahari logic

[PROPS / OBJECTS / RITUAL ELEMENTS] become flat folk-graphic story supports

[ENVIRONMENT / BACKGROUND] becomes a contained narrative field with border memory, flat spacing, and supportive motif structure rather than scenic realism

[POSE LOGIC] may use profile or spread-limb iconic figure behavior where appropriate, but must always keep action readable

Keep:

story-sequence memory
ritual-box ancestry
strong contour
flat folk-graphic clarity
restricted color logic
role-bearing figures
serpent symbolism
whole-frame branch purity

Avoid:

generic Bihar folk decoration
Madhubani-like dense filler spread
one isolated mythology poster
realistic people with folk outlines
decorative snakes with no story function
cinematic depth or atmospheric realism
a normal image with Manjusha styling applied later

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Manjusha painting from Bhagalpur, Bihar**.

Preserve the source image's subject count, core action, and basic event readability, but rebuild the entire image through **Manjusha ritual narrative grammar**. Replace realistic faces with iconic role-bearing folk figures. Replace scenic realism with flat pictorial story-space. Replace generic objects and settings with a contained ceremonial narrative field shaped by strong contour, restricted flat colors, serpent-symbolic presence, and sequence-memory.

If the source image contains human figures, they must become story-role units rather than generic people. If it contains snakes, they must become active symbolic carriers tied to the Bishahari/Bihula-Bishahari world. If it contains borders, framing, or surrounding space, these must help restore **container-memory** and ritual narrative order, not just decorate the scene.

Do not simply add snakes, folk colors, and outlines to a normal image. Do not turn the image into generic folk poster art. Rebuild the whole image so it feels as if the source scene was originally born inside the Manjusha ritual-story tradition of Ang/Bhagalpur.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative **2D + 3D translation** rooted in the visual grammar of **Manjusha painting from Bihar**, but keep the style source-faithful at its structural core. This must not become generic stylized folk illustration, snake fantasy art, or a modern poster with regional motifs. It should feel like authentic Manjusha intelligence expanding into a richer image system while still remaining **story-first, contour-governed, ritual-memory-based, and role-clear**.

Keep the native Manjusha engine intact: **strong outline, restricted flat palette centered on pink, green, and yellow, flat narrative logic, Bihula-Bishahari story-memory, serpent-goddess symbolism, and ceremonial container-structure**. Then allow a controlled creative expansion where the image gains more layered organization, stronger figure-event relation, slightly richer spatial structuring, and more articulated scene-building. Depth may appear only as **shallow layering, panel-like progression, relief-like ordering, or stacked event space**, never as realism-led cinematic environment.

Figure logic: human figures must remain iconic and story-bearing, not naturalistic. Serpents must remain symbolic and narratively active. The image should still feel like one moment in an unfolding ritual narrative, not a single decorative still. Let the environment become richer, but keep it subordinate to event clarity.

World logic: allow borders, symbolic supports, objects, vegetation, architectural cues, boats, ritual devices, or panel-memory to help build a richer Manjusha image-world. But keep the world **folk-graphic, flat-based, and sequence-compatible**. The composition should still remember the painted ceremonial box and serial narrative format.

Do not use generic folk fantasy, naturalistic anatomy, atmospheric realism, Madhubani-style filler dominance, or modern illustration logic wearing Manjusha colors and snakes. The whole frame must still feel generated by Manjusha's story-bearing ritual system.

Reusable Variable Template

Create **[SUBJECT / SCENE]** as a creative **2D + 3D translation** rooted in the visual grammar of **Manjusha painting from Bhagalpur, Bihar**.

Preserve these style-core rules:

- story logic remains primary
- figures remain role-bearing and iconic
- strong contour still organizes the image
- restricted pink-green-yellow folk palette stays active
- serpent symbolism remains narrative, not decorative
- ceremonial box-memory remains structurally present
- flat or shallow-depth pictorial logic remains stronger than realism
- whole-frame coherence remains intact

Translate the scene like this:

[MAIN EVENT / MAIN FIGURE] becomes a Manjusha narrative focal event inside a larger story-memory

[SECONDARY FIGURES] become supporting story units with role clarity

[SNAKES / SYMBOLIC MOTIFS] become active Bishahari-linked narrative carriers

[OBJECTS / RITUAL PROPS / BOATS / ARCHITECTURE / SUPPORTS] become flat-based but slightly richer forms that still feel born from Manjusha grammar

[ENVIRONMENT / SPACE] becomes a layered, panel-aware, shallow-depth story field rather than scenic natural space

[POSE / BODY LOGIC] remains iconic, simplified, and action-readable, with spread-limb or profile tendencies when appropriate

Let these become richer:

- event staging
- figure-environment relation
- story-space layering
- ritual and symbolic support structures
- scene articulation

Keep unchanged:

- story-first image logic
- restricted folk palette behavior
- bold contour authority
- serpent-goddess narrative field
- ritual-container memory
- whole-frame Manjusha identity

Avoid:

- generic folk poster design
- decorative snake art
- realistic mythology scene with folk patterns
- Madhubani-like filler takeover
- surface-only ornament
- cinematic empty space
- a generic world dressed with Manjusha cues

Image-to-Image

Convert this source image into a creative **2D + 3D Manjusha translation** rooted in the ritual narrative painting tradition of **Ang/Bhagalpur, Bihar**.

Preserve the source image's subject count, main action, pose relationships, and core readability, but reconstruct all visible forms through Manjusha grammar. Faces must become symbolic and role-bearing. Bodies must become contour-built and iconic. Snakes must become active story symbols. The background must no longer behave like a normal scene; it must become a contained ritual narrative field shaped by borders, event-structure, serial memory, and flat folk-graphic organization.

Allow the result to become richer than a strict flat copy by introducing controlled layered space, stronger relation among characters and symbols, and more articulated scene-building, but keep the image fundamentally **story-first and sequence-aware**. The environment, props, boats, ritual objects, vegetation, and framing zones must all feel generated by Manjusha grammar, not by generic realism or decorative folk fantasy.

Do not paste outlines and color onto the source image. Do not keep normal illustration or realistic anatomy underneath. Rebuild the whole scene so it feels as if Manjusha painting expanded into a richer 2D + 3D narrative image-world while keeping its ritual folklore engine intact.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable **full 3D dimensional world** generated from the visual grammar of **Manjusha painting from Bihar**, but keep the world governed by Manjusha structure rather than by ordinary realism. This is not a realistic mythological scene with folk patterns added later. It is a fully dimensional world in which **Manjusha's story-sequence logic, role-bearing figure system, serpent-goddess symbolism, ceremonial box-memory, restricted palette, and contour-built folk clarity** have become reality.

Convert the entire style system into dimensional form without losing its laws. Figures must remain iconic and narrative-bearing rather than portrait-naturalistic. Snakes must remain active symbolic agents, not zoological animals. The world must still feel like it belongs to the Bihula-Bishahari story cycle. Borders, framing, containment, event-structure, and panel-memory must still shape the image even as the space becomes believable and inhabitable.

World logic: the environment must feel built from Manjusha intelligence. Boats, ritual objects, box-memory, architectural cues, serpents, symbolic supports, ground, sky bands, and all scene divisions must still feel narrative and folk-graphic rather than ordinary scenic realism. The image may become richer in volume, material presence, and light-on-form, but story must remain stronger than atmosphere, and role clarity must remain stronger than spectacle.

Keep the palette controlled and style-faithful, centered on restricted flat folk color behavior even when dimensionality increases. Let light help readability, but do not allow cinematic realism to erase contour, symbolic identity, or the event-bearing structure of the image.

Do not use ordinary mythological realism, generic serpent-goddess fantasy, atmospheric village scenery, naturalistic portrait faces, or a normal world with Manjusha decoration applied later. Every major zone must belong to the Manjusha world-system.

Reusable Variable Template

Create **[SUBJECT / SCENE]** as a believable **full 3D dimensional world** generated from the visual grammar of **Manjusha painting from Bhagalpur, Bihar**.

Style system that must remain unchanged:

- story-sequence memory stays active
- figures remain role-bearing and iconic
- serpent-goddess symbolism remains central
- ceremonial box-memory still shapes the world
- restricted pink-green-yellow palette logic remains visible
- contour-built folk clarity remains structurally important
- event readability stays stronger than spectacle
- all visible elements belong to one Manjusha world

Translate the scene like this:

[MAIN EVENT / MAIN FIGURE] becomes a fully dimensional but still role-clear Manjusha narrative focal event

[SECONDARY FIGURES] become volumetric but still iconic and story-specific presences

[SERPENTS / GODDESS ELEMENTS / SYMBOLS] become fully dimensional

Manjusha-born symbolic carriers, not ordinary realistic beings

[OBJECTS / BOATS / RITUAL ELEMENTS / ARCHITECTURE / SUPPORTS] become believable forms shaped by Manjusha's ceremonial and narrative logic

[ENVIRONMENT] becomes an inhabited but still contained story-world structured by event zones, border memory, serial logic, and folk-graphic clarity

[LIGHT / MATERIAL TREATMENT] may increase tactile presence and scene readability, but must not erase contour, palette control, or role-bearing figure grammar

Increase:

- believable volume
- scene inhabitation
- material presence
- relation among figures, snakes, symbols, and supports
- environmental completion

Do not lose:

- story-first image logic
- ritual-container memory
- restricted folk palette behavior
- serpent-goddess symbolic field
- role-bearing figure clarity
- whole-frame Manjusha identity

Avoid:

- generic cinematic folk mythology
- realistic devotional poster art
- ordinary realism with Manjusha motifs
- Madhubani-style filler world
- surface decoration replacing structure
- one stylized object inside a non-Manjusha world

Image-to-Image

Convert this source image into a believable **full 3D Manjusha world** generated from the ritual narrative painting tradition of **Ang/Bhagalpur, Bihar**.

Preserve the source image's subject count, core action, major pose logic, and scene readability, but rebuild every major element through Manjusha world-logic. Replace ordinary faces with role-bearing folk figures. Replace naturalistic bodies with iconic design-led forms. Replace normal scenic logic with a fully dimensional but still story-sequence-driven environment shaped by ceremonial box-memory, serpent symbolism, border-aware containment, and event-based composition.

If the source image contains snakes, they must become Bishahari-linked symbolic agents rather than decorative reptiles. If it contains human figures, they must become character-types within the Bihula-Bishahari story world. If it contains props, boats, ritual objects, structures, or surrounding space, all of them must be rebuilt so they feel born from Manjusha's ceremonial narrative grammar rather than from generic realism.

Do not apply Manjusha as a surface style. Do not keep a normal realistic world underneath. Rebuild the whole scene so it feels as if the source image originally emerged from a fully dimensional Manjusha universe.
