

# Sonowal - Assam

## V1 — Authentic Style

### Universal Hard Prompt

Create an image in the authentic visual logic of the Sonowal Kachari handloom and dress-textile tradition of Assam. Treat this as a community-specific woven cloth system, not as generic Assamese handloom, not as printed ethnic fabric, not as fashion styling with tribal accents, and not as decorative surface design.

Build the image as if it comes from an actual Sonowal Kachari weaving world where cloth is made on household looms for real wear, social identity, and ceremonial use. The style must feel handloom-built, thread-structured, border-disciplined, and body-linked. The cloth should not behave like printed fabric or graphic wallpaper. It must feel woven into existence.

Use real textile logic: controlled border rhythm, counted band structure, loom-built pattern plausibility, fibrous cloth tactility, breathable handwoven material behavior, and visible drape suited to actual garments. Preserve the community-specific gamosa logic where appropriate: seven pulli border lines, green for the border lines, and yellow for the cloth body. Use this as a structural identity marker, not as random color decoration.

Garment logic is essential. If figures are present, the body must support cloth readability rather than overpower it. Use Sonowal Kachari dress-world cues such as woven gamosa use, mekhela-based women's dress use, men's dhuti-kurta use, and special festival cloth forms such as Faushi, Sapon, Patilong, Pharu, or Pag where relevant. The cloth must remain the primary identity field.

Material logic must remain specific: handloom cotton memory, muga-silk warmth where appropriate, matte thread-built texture, woven edge behavior, and real fold-and-wrap structure. The whole frame must feel born from Sonowal textile intelligence rather than from a generic realistic world with one traditional garment inserted into it.

Do not make it generic Assam handloom. Do not make it a printed fabric pattern. Do not make it an ethnic fashion editorial. Do not reduce it to green-yellow palette alone. Do not use oversized decorative motifs that stop feeling woven. Do not let one scarf or cloth item carry the whole style while the rest of the frame stays generic.

### Reusable Variable Template

Create [SUBJECT / SCENE] in the authentic visual logic of the Sonowal Kachari handloom and dress-textile tradition of Assam.

Treat the style as a woven cloth-and-dress identity system, not as generic traditional fabric decoration.

Core style system to preserve:

handloom-built cloth identity

loom-first pattern construction

counted and disciplined border rhythm

community-specific color-and-band coding

body-linked drape and wrap logic

woven motif integration rather than printed surface styling

fibrous cotton or muga-silk material memory

whole-frame consistency so every visible element belongs to the same Sonowal textile world

Translate the image like this:

[MAIN GARMENT / MAIN CLOTH FIELD] becomes a Sonowal Kachari woven textile

presence with real loom-built structure

[SECONDARY GARMENTS / ACCESSORIES] also obey the same woven border-and-band grammar

[FIGURE / BODY] supports cloth readability through realistic drape, fold, wrap, and edge visibility

[PROPS / SURROUNDINGS] inherit textile-born ordering rather than generic realism

Color and border logic:

use the Sonowal Kachari green-and-yellow identity code where appropriate

keep border lines counted, rhythmic, and structural

if using gamosa logic, retain seven pulli border discipline

Keep:

woven plausibility

cloth zoning

border rhythm

body-cloth hierarchy

community-specific distinction

handloom material tactility

Avoid:

generic Assamese handloom

printed ethnic patterns

fashion-first styling

wallpaper repetition

oversized decorative motifs

a generic image with one Sonowal-colored cloth added later

## Image-to-Image

Convert this source image into the authentic visual world of the Sonowal Kachari handloom and dress-textile tradition of Assam.

Preserve the source image's subject count, main action, pose relationships, and basic readability, but rebuild the entire image through Sonowal woven cloth logic. Replace generic fabric with handloom-built textile structure. Replace random borders with counted, disciplined border rhythm. Replace decorative pattern with loom-integrated motif behavior. Replace fashion-styled cloth with body-linked drape and wrap logic rooted in real wearable community garments.

If the image includes a gamosa or similar textile field, rebuild it through Sonowal Kachari identity coding: seven pulli border lines, green border lines, yellow cloth body, and woven construction rather than printed graphics. If figures are present, do not let the body dominate the cloth. Make the cloth the main identity field and let the body support drape, fold, and edge readability.

Retain handloom material memory: fibrous cotton or muga-silk tactility, matte woven texture, breathable cloth behavior, and real garment structure. Extend the style beyond a single garment so the whole image feels like it comes from a Sonowal textile world rather than from generic Assamese realism.

Do not paste Sonowal colors onto a normal outfit. Do not print motifs onto modern fabric. Do not turn the result into ethnic fashion photography. Rebuild the full image so it feels born from Sonowal Kachari woven grammar.

## **V2 — Artisan Translation**

### **Universal Hard Prompt**

Create a creative 2D + 3D image-world rooted in the Sonowal Kachari handloom and dress-textile tradition of Assam. Treat this as a woven cloth identity system expanded into a richer visual world, not as generic Assam craft mood, not as ethnic fashion imagery, and not as decorative textile patterning.

Keep the style source-rooted: handloom construction, counted border rhythm, woven cloth zoning, community-specific color coding, garment-linked use, and body-aware drape logic. The world must still feel woven-first. Do not let dimensional richness replace loom intelligence.

Allow the image to become more visually articulated while preserving cloth-born structure. Borders may organize wider areas of the frame. Textile zones may shape object divisions, edge behavior, figure grouping, and spatial rhythm. The green-yellow Sonowal identity code may be used where appropriate, but always as structural cloth logic rather than palette-only styling. If gamosa logic is used, retain the seven-pulli border discipline.

Material behavior must remain woven and tactile: fibrous surfaces, matte thread presence, breathable cloth folds, muga-silk warmth where relevant, and handloom plausibility in every visible textile field. The body, if present, must still serve cloth readability rather than becoming fashion-model-first.

The whole image must feel like Sonowal textile intelligence has expanded into a broader 2D + 3D world without losing community specificity. Objects, accessories, and environment should inherit woven ordering, border rhythm, and cloth-zoned structure rather than remaining generic realism.

Do not make it a generic craft poster. Do not turn it into luxury textile branding. Do not use wallpaper motifs or oversized decorative bands. Do not let the style collapse into green-yellow mood only. Do not let one traditional garment sit inside an otherwise unrelated visual world.

## **Reusable Variable Template**

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the Sonowal Kachari handloom and dress-textile tradition of Assam.

Preserve these style-core rules:

- woven construction remains primary
- loom-built border rhythm stays visible
- cloth zoning and band logic remain structural
- community-specific green-yellow coding may appear where appropriate
- gamosa logic, if present, must keep seven pulli border discipline
- body-linked drape and wrap behavior remain authentic
- the whole frame remains inside one Sonowal textile system

Translate the scene like this:

[MAIN FIGURE / MAIN CLOTH FIELD] becomes a richer Sonowal woven presence shaped by handloom logic

[SECONDARY GARMENTS / OBJECTS] obey the same border-and-band structure

[PROPS / EDGES / SURFACES] inherit textile rhythm and zoned organization

[ENVIRONMENT] becomes a broader field organized by woven logic rather than generic realism

Let these become richer:

- spatial layering
- cloth-to-object relationships
- textile-driven edge behavior
- border-guided composition
- 2D + 3D textile-world depth

Keep unchanged:

handloom plausibility  
community-specific distinction  
cloth-first identity  
woven motif integration  
body supporting textile readability

Avoid:

generic Assamese textile styling  
fashion editorial realism  
printed-surface shortcuts  
decorative motif overlays  
wallpaper repetition  
a generic scene merely accessorized with Sonowal cloth

## **Image-to-Image**

Convert this source image into a creative 2D + 3D Sonowal textile translation from Assam.

Preserve the source image's subject count, action, pose relationships, and scene readability, but rebuild all visible textile logic through Sonowal Kachari handloom grammar. Replace generic cloth with woven border rhythm, measured band structure, loom-integrated motifs, fibrous textile memory, and body-linked drape logic. If the image includes a gamosa or identity cloth, rebuild it through the Sonowal green-yellow system and seven-pulli border discipline where appropriate.

Let the image become richer and more spatial than a strictly documentary garment view, but keep every visible element rooted in Sonowal textile intelligence. Cloth zones should shape the larger frame. Props, edges, surfaces, and even environment divisions should inherit woven rhythm rather than remaining unrelated realism. The body must still support textile readability rather than dominating it.

Retain material memory: handloom cotton tactility, muga-silk warmth where relevant, matte thread-built surfaces, real fold behavior, and woven plausibility. The final image should feel like Sonowal cloth grammar generated the image-world, not like Sonowal motifs were applied after the fact.

Do not add tribal-looking bands onto normal clothing. Do not make it fashion-first. Do not turn it into generic craft atmosphere. Rebuild the full image so it feels authored by Sonowal Kachari textile intelligence.

## **V3 — 3D / Realistic / Cinematic Translation**

### **Universal Hard Prompt**

Create a believable full 3D dimensional world generated from the Sonowal Kachari handloom and dress-textile tradition of Assam. Treat this as a woven cloth identity system translated into reality, not as generic Assamese realism, not as ethnic fashion imagery, and not as decorative textile styling.

The realism must remain fully governed by Sonowal textile grammar. Build the world through handloom cloth construction, counted border rhythm, woven motif integration, community-specific color-and-band coding, drape-aware garment use, and body-cloth hierarchy. The green-yellow Sonowal identity system may appear where appropriate, and if gamosa logic is present it must retain seven pulli border discipline as a real woven structural rule.

Every textile field must feel genuinely woven: fibrous thread presence, breathable cotton memory, warm muga-silk richness where relevant, matte handloom tactility, believable fold and wrap behavior, and real edge logic. The body must never overpower the cloth. Garments, accessories, and textile objects must all feel like they come from a living Sonowal Kachari weaving world rather than from generic traditional-costume realism.

Extend the grammar to the whole frame. Figures, props, surfaces, interiors, objects, and environment must all inherit textile-born ordering where appropriate: banded divisions, rhythmic edge treatment, woven field logic, and community-specific dress-world coherence. The result should feel like Sonowal textile intelligence became a complete dimensional reality.

Do not make it a realistic person wearing vaguely traditional Assamese cloth. Do not turn it into glossy fashion photography. Do not use print-like surfaces, decal motifs, or generic handloom mood. Do not reduce the style to green-yellow accents. Every important element must still belong to the Sonowal woven system.

## **Reusable Variable Template**

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the Sonowal Kachari handloom and dress-textile tradition of Assam.

Style system that must remain unchanged:

- handloom-built textile identity
- counted border rhythm and band logic
- woven motif integration
- community-specific cloth distinction
- green-yellow identity code where appropriate
- gamosa seven-pulli logic where relevant
- body-linked drape and wrap behavior
- whole-frame Sonowal consistency

Translate the world like this:

[MAIN FIGURE / MAIN GARMENT FIELD] becomes a fully dimensional Sonowal woven presence

[SECONDARY GARMENTS / ACCESSORIES / OBJECTS] become volumetric but still loom-governed

[PROPS / SURFACES / EDGES] inherit textile-born structure and border discipline

[ENVIRONMENT] becomes a believable spatial field organized by cloth intelligence rather than by generic realism alone

Increase:

believable volume

light on woven surfaces

drape realism

material depth

whole-world coherence

community-specific textile presence

Do not lose:

handloom plausibility

cloth-first identity

border count discipline

woven edge behavior

body serving cloth readability

Sonowal Kachari distinction

Avoid:

generic Assam handloom

fashion catalog realism

printed pattern shortcuts

glossy synthetic fabric

oversized decorative motifs

a generic realistic world with one Sonowal-coded textile added later

## **Image-to-Image**

Convert this source image into a full 3D realistic Sonowal textile world from Assam.

Preserve the source image's core action, major pose logic, subject count, and readability, but rebuild all visible textile forms through Sonowal Kachari handloom grammar. Replace generic cloth with loom-built structure, counted borders, woven motif integration, fibrous material presence, breathable fold behavior, and body-linked drape logic. If a gamosa or identity cloth is present, rebuild it through Sonowal green-yellow coding and seven-pulli border structure where appropriate.

Extend the style beyond one garment. Clothing, accessories, textile objects, edges, and surrounding visual order must all feel generated from a Sonowal woven system. The whole frame should carry textile intelligence: banded divisions, woven zoning, cloth-led hierarchy,

and community-specific distinction. The final image should feel like Sonowal handloom culture became dimensional reality.

Retain material memory: cotton handloom tactility, muga-silk warmth where relevant, matte woven surfaces, realistic cloth weight, and support from real garment use. Keep the body subordinate to the textile so the cloth remains the main identity field.

Do not paste Sonowal colors onto a normal costume. Do not turn the result into luxury ethnic fashion. Do not replace woven logic with print-like patterning. Rebuild the full image so the world itself feels authored by Sonowal Kachari textile grammar.
