

Tai-Ahom - Assam

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of the Tai-Ahom manuscript tradition of Assam. Treat this as a manuscript-born folio-and-script system, not as generic ancient manuscript decoration, not as later Ahom court painting, not as Mughal-style miniature art, and not as fantasy “old page” aesthetics.

Build the image as if it belongs to an actual Tai-Ahom manuscript world preserved on folio supports such as sanchipat bark, cloth, or related manuscript materials. The image must feel like part of a knowledge-bearing manuscript object rather than a free painting on neutral paper. The page must carry folio identity, support awareness, manuscript compression, and script-bearing structure.

Script is essential. The visual field must feel governed by inscription-bearing space, text-image coexistence, and encoded manuscript meaning. Do not treat script as decoration. The page should feel like it contains real textual force, numbering logic, marginal order, or manuscript-zone intelligence, even if the exact textual content is stylized for generation purposes.

Image logic must remain manuscript-first. If figures appear, they should behave like codified manuscript figures rather than realism-first painted bodies. If symbols, diagrams, mandala-like structures, divinatory signs, or knowledge-marks appear, they must feel manuscript-borne and encoded, not ornamental filler. The whole page should feel compressed, ordered, and support-aware rather than cinematic or open-scenic.

Material behavior must remain manuscript-authentic: prepared folio surface, manuscript wear-memory, handled object presence, opaque or support-aware pigment behavior, and clear distinction between text zones, image zones, and page-field structure. The result must feel like a preserved Tai-Ahom manuscript artifact with living script-image intelligence.

Do not make it into generic “Buddhist manuscript art.” Do not make it into later Ahom court painting. Do not make it a decorative old parchment with random script. Do not use generic fantasy symbols or pseudo-historical props. Do not treat the page like a normal painting with a manuscript texture pasted behind it.

Reusable Variable Template

Create [SUBJECT / SCENE / PAGE TYPE] in the authentic visual logic of the Tai-Ahom manuscript tradition of Assam.

Treat the style as a manuscript-born folio-and-script system rooted in Tai-Ahom textual culture, not as generic historic illustration.

Core style system to preserve:

- folio manuscript identity
- support-aware page-field organization
- script-bearing space with real structural force
- text-image coexistence
- encoded knowledge / ritual / symbolic manuscript content
- compressed manuscript logic rather than open scenic space
- manuscript-object presence rather than free painting
- whole-frame consistency so every visible element belongs to the same Tai-Ahom manuscript world

Translate the page like this:

- [MAIN CONTENT] becomes a manuscript-centered focal field shaped by folio logic
- [FIGURES / SYMBOLS / DIAGRAMS] become codified manuscript forms rather than realism-first illustrations
- [SCRIPT / INSCRIPTION ZONES] become structural parts of the page, not decorative garnish
- [MARGINS / SUPPORT / EDGES / SURFACE] become manuscript-aware zones with folio discipline

Keep:

- support material memory
- page compression
- script-image relationship
- knowledge-bearing visual order
- Tai-Ahom manuscript identity

Avoid:

- generic old paper styling
- later Ahom court painting logic
- miniature painting drift
- scenic realism
- pseudo-script decoration
- random mystic symbols with no manuscript logic

Image-to-Image

Convert this source image into the authentic visual world of the Tai-Ahom manuscript tradition of Assam.

Preserve the source image's core subject relationships, main content hierarchy, and readability, but rebuild the entire image through Tai-Ahom manuscript logic. Replace ordinary picture-space with folio space. Replace neutral background with support-aware manuscript

surface. Replace decorative or modern text treatment with inscription-bearing structure. Replace open scenic composition with compressed page-field organization governed by manuscript intelligence.

If the source image contains figures, convert them into codified manuscript figures that belong naturally inside a script-bearing folio world rather than realistic painted bodies. If it contains symbols, maps, diagrams, or signs, convert them into encoded manuscript marks with ritual, lexical, historical, or divinatory force rather than loose decoration. If it contains margins, edges, empty fields, or text zones, make them behave like real manuscript architecture.

The result must feel like a preserved Tai-Ahom manuscript folio or manuscript-derived page-world, with support memory, script-image coexistence, compressed organization, and encoded knowledge-bearing structure.

Do not simply place the source image on an old paper texture. Do not add fake script around a realistic picture. Do not turn it into generic “ancient Asian manuscript” styling. Rebuild the full image so it feels born from the Tai-Ahom manuscript system itself.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image-world rooted in the Tai-Ahom manuscript tradition of Assam. Treat the source not as generic manuscript decoration but as a folio-and-script knowledge system whose visual intelligence comes from page compression, inscription-bearing structure, text-image coexistence, symbolic content, and manuscript-object identity.

This version should remain source-rooted while becoming more visually articulated. Keep Tai-Ahom manuscript logic primary: folio support awareness, script-bearing zones, codified manuscript figures or signs, encoded knowledge marks, and controlled page-field organization. Let the image become richer and more dimensional in a handcrafted way, but it must still feel manuscript-born, not scenic-painting-born.

Allow the page-world to develop layered 2D + 3D presence. Figures, symbols, text zones, diagrams, and support edges may gain more tactile separation and designed hierarchy, but they must still obey folio discipline. The world should feel like a manuscript system opening up spatially while remaining governed by page logic, inscription force, and encoded content.

Material behavior must still remember manuscript supports such as bark-folio, cloth, or preserved manuscript surface. The image should retain opaque, support-aware pigment behavior, manuscript edge logic, object-memory, and handled archival presence. The page must never stop feeling like a manuscript artifact even as it becomes visually richer.

Do not turn this into later Ahom court painting. Do not turn it into a generic old-book fantasy spread. Do not let the dimensionality erase script structure. Do not let diagrams or symbols become ornamental wallpaper. Do not convert manuscript intelligence into atmospheric historical mood only.

Reusable Variable Template

Create [SUBJECT / SCENE / MANUSCRIPT PAGE TYPE] as a creative 2D + 3D translation rooted in the Tai-Ahom manuscript tradition of Assam.

Preserve these style-core rules:

- manuscript identity remains primary
- folio support logic stays visible
- script has structural force
- text-image coexistence remains active
- encoded symbolic / ritual / historical / lexical content remains legible
- page compression remains stronger than scenic openness
- the whole frame remains inside one Tai-Ahom manuscript system

Translate the page like this:

- [MAIN CONTENT] becomes a richer manuscript-centered field with layered folio intelligence
- [FIGURES / SYMBOLS / DIAGRAMS] become codified forms integrated into manuscript space
- [SCRIPT / TEXT BLOCKS / INSCRIPTION ZONES] remain structurally meaningful
- [MARGINS / SURFACE / EDGES / PAGE DIVISIONS] become tactile manuscript architecture

Let these become richer:

- layered field depth
- support-to-content relation
- manuscript-zone separation
- tactile folio presence
- integrated 2D + 3D manuscript-world order

Keep unchanged:

- script-bearing page logic
- folio compression
- knowledge-bearing structure
- Tai-Ahom manuscript identity
- source-rooted codification

Avoid:

- generic historic manuscript mood
- pseudo-calligraphy
- miniature painting drift

later court-style polish
open scenic composition
ornamental manuscript cosplay

Image-to-Image

Convert this source image into a creative 2D + 3D Tai-Ahom manuscript translation from Assam.

Preserve the source image's subject count, main content order, and readable hierarchy, but reconstruct the entire image through Tai-Ahom folio-and-script logic. Replace normal image-space with a compressed manuscript page-field. Replace ordinary surfaces with support-aware folio material. Replace decorative writing with structurally meaningful inscription-bearing zones. Replace free illustration logic with codified manuscript organization.

Allow the image to become richer and more tactile than a strict flat folio reproduction, but keep every element inside one manuscript-born system. Figures, diagrams, symbols, text, margins, and surface divisions must all inherit the same Tai-Ahom manuscript intelligence. The image should feel as though a preserved manuscript page has expanded into a richer 2D + 3D visual field without losing its textual and codified identity.

Retain manuscript-object memory: support material behavior, page edges, handled preservation feel, opaque manuscript pigment logic, and clear zone hierarchy between inscription, image, and encoded sign.

Do not paste the source image onto manuscript texture. Do not make the script fake or decorative. Do not turn it into generic archival fantasy, Buddhist-page shorthand, or later Ahom court painting. Rebuild the full image so it feels generated by Tai-Ahom manuscript grammar.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the Tai-Ahom manuscript tradition of Assam. Treat the style as a folio-and-script manuscript system translated into reality, not as generic historical realism, not as later Ahom court painting, not as miniature art, and not as fantasy archive aesthetics.

The realism must remain fully governed by Tai-Ahom manuscript grammar. Build the world through folio support intelligence, inscription-bearing structure, text-image coexistence, codified signs, encoded ritual-historical-lexical content, and preserved manuscript-object

memory. The dimensional world should feel as if manuscript logic itself became inhabitable reality.

Space must still behave like manuscript space transformed into volume, not like ordinary scenic realism. Script must still matter. Page divisions, support edges, margins, symbolic compartments, and codified signs must still organize the world. Figures, if present, must still behave like manuscript-born figures whose logic comes from inscription-linked page culture rather than portrait-naturalist painting. Symbols and diagrams must retain knowledge-bearing force rather than becoming decorative props.

Material behavior must remain true to manuscript origin: bark-folio or cloth-support memory, layered preserved surface, controlled opaque pigment logic, handled archival presence, script-bearing material authority, and object-memory of tied, wrapped, stored, and transmitted manuscripts. The whole world must feel like it emerged from a Tai-Ahom manuscript civilization rather than from generic ancient-world fantasy.

Do not make it a normal historical environment with manuscript textures added later. Do not let realism replace manuscript organization. Do not convert script into meaningless glyph decoration. Do not drift into later Ahom royal art, Mughal-miniature logic, or generic sacred-manuscript atmospherics. Every important element must still belong to the Tai-Ahom manuscript system.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD TYPE] as a full 3D realistic dimensional world generated from the Tai-Ahom manuscript tradition of Assam.

Style system that must remain unchanged:

folio manuscript identity

support-aware spatial logic

script-bearing structure with real meaning-force

text-image coexistence

codified symbolic / ritual / historical / lexical manuscript content

page-compression intelligence translated into volume

manuscript-object memory across the full frame

whole-frame Tai-Ahom consistency

Translate the world like this:

[MAIN CONTENT] becomes a fully dimensional field still governed by folio-and-script logic

[FIGURES / SYMBOLS / DIAGRAMS / OBJECTS] become volumetric but manuscript-born forms

[SCRIPT / INSCRIPTION / TEXT ZONES] remain structurally active and knowledge-bearing

[ENVIRONMENT / SURFACE / EDGES / DIVISIONS] become a believable spatial world organized by manuscript architecture

Increase:

believable depth
material presence
light on support and pigment
encoded field organization
whole-world manuscript cohesion

Do not lose:
script force
folio identity
page-born compression
knowledge-bearing structure
Tai-Ahom manuscript difference from later court styles

Avoid:
ordinary realism
generic archive fantasy
court painting drift
miniature painting drift
pseudo-script ornament
scenic environment logic overpowering manuscript logic

Image-to-Image

Convert this source image into a full 3D realistic Tai-Ahom manuscript world from Assam.

Preserve the source image's core relationships, main action or content order, and overall readability, but rebuild all visible forms through Tai-Ahom folio-and-script manuscript grammar. Replace ordinary picture logic with manuscript-architecture logic. Replace generic background with support-aware dimensional manuscript space. Replace non-structural text with inscription-bearing fields. Replace decorative symbolic elements with codified manuscript signs that feel historically, ritually, lexically, or divinatory meaningful.

Extend the style beyond the page surface into the entire world. Figures, objects, surfaces, zones, symbols, inscriptions, and environment must all feel generated from a Tai-Ahom manuscript civilization built on folio support, encoded knowledge, and page-compressed structure. The final image should feel like the Tai-Ahom manuscript system became dimensional reality without losing script, support, or object-memory.

Retain manuscript material identity: bark-folio or cloth-support memory, preserved surface tactility, archival object presence, manuscript edge logic, handled and transmitted object-feel, and support-aware pigment behavior. Keep the result structurally manuscript-born even in full dimensional translation.

Do not put manuscript texture behind a normal realistic scene. Do not let fake calligraphy replace real script force. Do not drift into later Ahom court painting, Mughal-style miniature

logic, or generic sacred-manuscript fantasy. Rebuild the entire image so the world itself feels authored by Tai-Ahom manuscript grammar.
