

Tikuli -Bihar

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic source-faithful visual logic of **Tikuli painting from Bihar**, specifically the **Patna hard-surface painted craft** that grew out of the **bindi / tikuli tradition** and later evolved from **glass-based ornamental work** into **fine enamel painting on smooth board surfaces such as MDF**. Treat this as a **precision-painted, polished decorative-object art system**, not as generic Bihar folk painting, not as Madhubani transferred onto board, not as matte mural art, and not as printed decorative design.

Build the whole image as if it belongs to a real Tikuli craft object: a **hard, smooth, compact, polished surface** meant to be viewed closely and appreciated for finish, refinement, and decorative resolution. Use **fine controlled linework**, **clean-edged painted shapes**, **enamel-like color behavior**, and a **glossy, finished, durable surface feel**. The image must remember both the older **glass ancestry** and the modern **MDF-and-enamel craft practice**. Every visual element should feel carefully resolved with ultra-fine tool precision rather than loosely hand-painted.

Figure logic: if figures appear, build them as **neatly bounded, polished, decorative forms**, not rough folk sketches and not realism-first portraits. Faces should be clear, refined, and surface-controlled. Eyes, nose, mouth, costume, jewelry, and body edges should all feel deliberately painted for a hard polished support. If the subject uses traditional or mythic imagery, keep the figure readable but always within Tikuli's finish-conscious grammar.

Space logic: this is **object-surface space**, not mural space and not cinematic landscape space. The composition must feel compact, bounded, and support-aware, as if it could belong to a plaque, tray, coaster, wall plate, mat, or similar handcrafted object. Background and border must support the same polished craft logic as the main subject. The whole frame must obey one hard-surface decorative system.

Material and ornament logic: use a smooth enamel-painted look, jewel-like decorative clarity, precise ornament, and polished surface finish. Ornament should remain controlled, crisp, and structurally integrated, never rough, overfilled, or textile-like. If borrowed motifs from Mithila or other Bihar traditions appear, they must be fully transformed into Tikuli's own polished craft language rather than left in their original grammar.

Do not make this look like matte folk painting, painted cloth, embroidery, wall painting, rough handmade mural work, generic souvenir art, or another Bihar style with gloss added later. The final image must feel like true Tikuli painting from Bihar: **bindi-derived, hard-surfaced, precision-painted, and fully resolved in finish**.

Reusable Variable Template

Create **[SUBJECT / SCENE]** in the authentic source-faithful visual logic of **Tikuli painting from Patna, Bihar**, treating it as a **precision-painted hard-surface craft system derived from the bindi tradition** rather than as generic folk painting or decorative board art.

Core style system to preserve:

- bindi-origin ornament memory
- hard smooth support such as glass-memory or MDF-board logic
- fine controlled painted linework
- clean-edged shape construction
- enamel-like color behavior
- glossy polished finish
- compact object-surface composition
- Patna craft identity
- whole-frame finish coherence

Translate the scene like this:

[MAIN SUBJECT] becomes a Tikuli-built polished decorative focal form with crisp finish and refined edge control

[SECONDARY FIGURES OR MOTIFS] become neatly resolved supporting forms that obey the same hard-surface painted grammar

[BACKGROUND / BORDER / EDGE TREATMENT] becomes support-aware and polished, not generic empty space and not mural spread

[ORNAMENT] becomes precise, controlled, and enamel-compatible rather than textile-like or filler-heavy

[BORROWED THEMES IF ANY] must be fully transformed into Tikuli medium logic, not left as another style inside a shiny surface

Keep:

- hard polished support memory
- precision-painted line
- clean edges
- compact composition
- decorative-symbolic clarity
- Patna craft feel
- whole-surface resolution

Avoid:

- generic Bihar folk painting
- Madhubani on board
- matte or rough paint handling
- fabric or wall-surface logic
- souvenir-art looseness
- decorative shine without true Tikuli precision
- borrowed motifs left in another style's grammar

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Tikuli painting from Bihar**.

Preserve the source image's subject count, major action, and core readability, but rebuild the entire image through **Tikuli's hard-surface painted craft grammar**. Replace any matte, rough, stitched, mural-like, or generic illustrated behavior with a **smooth polished decorative-object surface**. Convert all visible forms into crisp, fine-controlled painted shapes with enamel-like color and glossy finish. The result should feel as if it was carefully executed on a hard support such as a Tikuli panel, tray, coaster, wall plate, or polished decorative board.

If the source image contains figures, make them refined, clean-edged, and decorative without becoming realism-first portraits. If it contains borders, ornaments, or borrowed traditional motifs, fully translate them into Tikuli's support-and-finish system. Background, edge zones, and negative space must also feel part of the same object-surface world. Nothing important should remain in cloth logic, wall logic, rough folk logic, or generic illustration logic.

Do not simply add gloss to the source image. Do not transfer another Bihar style onto board. Do not make it look like a printed decorative item. Rebuild the whole image so it feels as if the source scene originally emerged from the Tikuli craft tradition of Patna: **bindi-derived, precision-painted, polished, and hard-surface-specific**.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative **2D + 3D translation** rooted in the visual grammar of **Tikuli painting from Bihar**, but keep the style source-faithful at its structural core. This must not become generic stylized illustration, generic glossy decorative art, or another Bihar style rendered with polish. It should feel like authentic Tikuli intelligence expanding into a richer image system while still remaining **bindi-derived, support-aware, precision-painted, and finish-driven**.

Keep the native Tikuli engine intact: **hard polished support logic, enamel-like paint behavior, compact decorative composition, fine controlled linework, clean edges, and Patna object-craft identity**. Then allow a controlled creative expansion where the image gains more layered ornamental richness, stronger figure-to-surface relation, slightly richer spatial suggestion, and more developed internal detailing. Depth may appear only as

surface layering, lacquer-like relief, decorative object-depth, and support-aware dimensional suggestion, never as realism-first scenic space.

Figure logic: if figures appear, they must still feel finely painted, crisp, and object-surface-resolved rather than loosely illustrated. Decorative motifs, costume details, jewelry, flora, fauna, or borrowed traditional themes may become richer, but they must all remain under Tikuli's precision and finish discipline. Nothing should feel rough, absorbent, soft, or textile-like.

Space and support logic: let the composition become richer within a bounded decorative field. The image may feel more articulated than a flat plaque, but it must still remember the reality of Tikuli as a painted object-surface craft. Even when the support is not explicitly shown, the world must still feel compact, polished, and finish-conscious rather than mural-like or cinematic.

Material and ornament logic: use smooth enamel-like color, clean internal patterning, jewel-like decorative clarity, polished highlights, and refined surface resolution. Ornament may become more intricate, but it must remain structurally integrated and support-aware. If traditional Bihar themes or Mithila-inspired motifs are present, translate them fully into Tikuli's own polished hard-surface grammar.

Do not make this into generic glossy board illustration, decorative fantasy with Indian motifs, souvenir-shop art, or realism with patterns added later. The final image must feel like Tikuli painting creatively expanded while still remaining unmistakably Tikuli in support logic, finish behavior, and precision.

Reusable Variable Template

Create **[SUBJECT / SCENE]** as a creative **2D + 3D translation** rooted in the visual grammar of **Tikuli painting from Patna, Bihar**.

Preserve these style-core rules:

- hard polished support remains primary in spirit
- line remains fine, controlled, and finish-conscious
- color remains enamel-like and surface-resolved
- composition remains compact and object-aware
- ornament remains precise and integrated
- bindi-origin memory remains active
- borrowed motifs must become Tikuli, not remain another style
- whole-frame finish coherence remains intact

Translate the scene like this:

[MAIN SUBJECT] becomes a Tikuli-built polished focal form with refined line, crisp silhouette, and decorative authority

[SECONDARY FIGURES OR MOTIFS] become supporting painted units resolved through the same hard-surface logic

[BACKGROUND / BORDER / SURROUNDING FIELD] becomes a bounded, support-aware decorative field rather than open mural space or scenic realism

[ORNAMENT / INTERNAL DETAIL] becomes richer and more layered, but stays precise and enamel-compatible

[DEPTH TREATMENT] may include shallow object-depth, lacquer-like relief, and decorative dimensional suggestion, but never realism-led spatial expansion

[BORROWED THEMES IF ANY] must be structurally translated into Tikuli support-and-finish behavior

Let these become richer:

- ornamental layering
- figure-surface relation
- internal detail
- support awareness
- decorative depth
- finish intensity

Keep unchanged:

- hard-surface identity
- precision-painted control
- polished decorative logic
- compact composition
- Tikuli-first transformation of themes
- whole-surface unity

Avoid:

- generic glossy illustration
- Madhubani-on-board drift
- matte or rough folk handling
- textile or mural logic
- souvenir-art looseness
- polish without real structure
- another style wearing Tikuli finish

Image-to-Image

Convert this source image into a creative **2D + 3D Tikuli translation** rooted in the painted hard-surface craft tradition of **Patna, Bihar**.

Preserve the source image's subject count, major action, and readable composition, but reconstruct all visible forms through **Tikuli's support-and-finish grammar**. Transform any rough, matte, stitched, or paper-like behavior into a polished hard-surface painted world. Give the image fine-line control, enamel-like color clarity, clean decorative edges, compact object-surface organization, and richer ornamented depth while keeping the work structurally Tikuli.

If the source image contains people, motifs, religious themes, animals, or borrowed traditional forms, repaint them as finely resolved Tikuli forms rather than leaving them in another visual language. If the source contains borders, objects, or surrounding negative space, make them feel like part of a single polished crafted support rather than background leftovers.

Do not simply add shine or lacquer to the image. Do not keep another Bihar style's structure underneath. Do not make it look like printed gift-item art. Rebuild the whole image so it feels as if the source scene was originally conceived within a creatively expanded Tikuli object-world: **precise, polished, hard-surfaced, and finish-driven.**

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable **full 3D dimensional world** generated from the visual grammar of **Tikuli painting from Bihar**, but keep the world governed by Tikuli structure rather than by ordinary realism. This is not a realistic scene with decorative polish added later. It is a fully dimensional world in which **bindi-derived ornament memory, hard polished support behavior, enamel-like color, fine-line precision, compact decorative composition, and object-surface finish logic** have become reality.

Convert the entire style system into dimensional form without losing its laws. Figures must still feel refined, crisp, and surface-resolved rather than ordinary naturalistic people. Motifs, borders, ornaments, and borrowed traditional imagery must still feel generated by Tikuli's precision-painted hard-surface craft logic rather than by generic painting or sculptural realism. The world may become materially convincing, but it must still feel as if it belongs to a lacquered, enamel-finished, support-aware decorative craft tradition.

World logic: the environment must feel built from Tikuli intelligence. This does not mean literal MDF boards floating in space. It means every surface, object, figure, and interval of space must still behave like it belongs to a Tikuli world: smooth, polished, bounded, refined, ornamentally controlled, and finish-conscious. Decorative fields may deepen, motifs may gain tactile relief, and color may become materially rich, but the image must never lose its hard-surface painted identity.

Material logic: use enamel-like sheen, polished object surfaces, clear edge transitions, durable decorative finish, and tactile crafted refinement. Light may increase the sense of material presence, but it must not turn the work into generic realism. The image should feel like Tikuli has become a dimensional world without ceasing to be Tikuli.

Do not create generic glossy realism, polished illustration with Indian motifs, Madhubani-like scenes on lacquered board, matte realism with decorative overlays, or any support-neutral world. The final image must feel like a fully dimensional Tikuli universe: **bindi-derived, object-surface-conscious, precision-painted, and finish-complete.**

Reusable Variable Template

Create **[SUBJECT / SCENE]** as a believable **full 3D dimensional world** generated from the visual grammar of **Tikuli painting from Patna, Bihar**.

Style system that must remain unchanged:

- bindi-origin ornament memory remains active
- hard polished support logic remains structurally present
- precision line and edge control remain visible
- color remains enamel-like and finish-conscious
- composition remains compact and object-aware
- ornament remains integrated and refined
- borrowed motifs must be fully Tikuli-transformed
- the whole frame belongs to one Tikuli finish-world

Translate the scene like this:

[MAIN SUBJECT] becomes a fully dimensional Tikuli-built focal presence with crisp decorative finish and support-aware form logic

[SECONDARY FIGURES OR MOTIFS] become volumetric but still precision-painted and Tikuli-resolved

[BACKGROUND / BORDER / FIELD] becomes a dimensional yet still bounded decorative support-world, not open scenic realism

[MATERIAL TREATMENT] may include enamel sheen, lacquer-like relief, polished edges, and durable crafted surface presence

[DEPTH TREATMENT] may increase tactile dimensionality and object-world realism, but must not erase support logic or decorative compactness

[BORROWED THEMES IF ANY] must become fully Tikuli in finish, composition, and medium behavior

Increase:

- material presence
- polished depth
- object-world tactility
- ornamental layering
- support awareness
- finish completion

Do not lose:

- hard-surface identity
- bindi-origin memory
- precision-painted control
- Tikuli-first transformation of themes
- compact decorative logic
- whole-frame finish coherence

Avoid:

- generic realism with glossy coating
- souvenir-art fantasy
- Madhubani or other Bihar styles under a lacquer skin
- soft painterly edges
- support-neutral scene-making
- polish without Tikuli structure
- one Tikuli-like object inside a non-Tikuli world

Image-to-Image

Convert this source image into a believable **full 3D Tikuli world** generated from the painted hard-surface craft tradition of **Patna, Bihar**.

Preserve the source image's subject count, core action, and main compositional readability, but rebuild every major element through **Tikuli's support-and-finish logic**. Replace matte or generic surface behavior with a polished enamel-like object-world. Replace loose or soft forms with precision-built decorative forms. Replace support-neutral space with a compact, bounded, finish-conscious world where every figure, motif, edge, and background zone feels born from hard-surface crafted painting.

If the source image contains figures, make them refined and Tikuli-resolved rather than ordinary realistic or folk-mural forms. If it contains borrowed traditional imagery, fully transform it into Tikuli medium behavior. If it contains borders, objects, panels, trays, coasters, plaques, or support-like structures, integrate them into one coherent polished decorative system. Even when the world becomes dimensional, nothing major should lose Tikuli's bindi-derived ornament memory and object-surface discipline.

Do not merely add gloss or lacquer to the source image. Do not keep another style's structure underneath. Do not make it into generic polished illustration. Rebuild the whole image so it feels as if the source scene originally emerged from a fully dimensional Tikuli craft universe: **precise, polished, support-aware, and finish-complete**.
