

Kolam Geometry - Tamil Nadu

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Kolam Geometry from Tamil Nadu**, treating it as a **Tamil ritual threshold-drawing system** built through **dot-grid construction, continuous line-and-loop intelligence, symmetry, powder-based floor marking, hand-performed geometric order, domestic sacred timing, and auspicious threshold activation**.

Build the image as if it genuinely belongs inside the native Tamil kolam practice itself. The image must be governed first by **threshold placement, ground-plane occupation, dot-grid structure, continuous line flow**, and **powder-drawn ephemerality**, not by generic rangoli styling, festival-color spectacle, decorative floor art, mandala design, or graphic pattern design.

The design must feel floor-bound and threshold-specific. It should feel like it belongs at a house entrance, courtyard edge, doorway zone, or domestic ritual ground, not on a neutral decorative surface. The pattern must feel mathematically ordered, symmetrical, and hand-constructed. The line should feel like a practiced path moving around or through a dot-grid system. Loops, turns, crossings, and knot-like behaviors must feel necessary and structurally resolved, not decorative only.

The mark must feel like **rice flour or powder released by hand**, not paint, not chalk illustration, not digital vector line. The drawing should feel precise but still ephemeral, renewable, and daily. If motifs appear, such as birds, animals, flowers, serpentine forms, or celestial suggestions, they must emerge from the geometric system and remain subordinate to grid, loop, and line intelligence.

The design must still carry **auspicious threshold activation**. It should feel welcoming, ordered, protective, prosperity-inviting, and domestically sacred rather than merely pretty. If figures, objects, architecture, or environment appear, they must also belong to the same threshold-geometric world rather than stay generic.

Do not make this generic rangoli, décor-first floor ornament, festival-only color pattern, freehand pictorial floor art, or realism with kolam motifs pasted on top. The final result must feel like **the real Tamil kolam system itself made the whole image**.

Reusable Variable Template

Create **[SUBJECT / THRESHOLD IMAGE / GEOMETRIC GROUND SYSTEM / FIGURAL GEOMETRIC IMAGE]** in the **pure authentic source-truth visual logic of Kolam Geometry from Tamil Nadu.**

Style system that must remain unchanged:

- threshold identity
- ground-plane occupation
- dot-grid structural intelligence
- continuous line-and-loop logic
- symmetry and mathematical order
- powder-based floor-marking identity
- ritual domestic activation
- whole-frame kolam consistency

Translate the image like this:

- **[MAIN GEOMETRIC FIELD / MAIN FORM / MAIN SUBJECT IF PRESENT]** becomes a kolam-built presence governed by dot-grid and threshold order
- **[GRID / SPACING / ANCHOR POINTS]** must feel structurally resolved, visible or implicit
- **[LINES / LOOPS / KNOTS / CURVES / INTERLACING PATHS]** must feel continuous, hand-performed, and mathematically controlled
- **[GROUND / THRESHOLD / ENTRY ZONE]** must feel like the natural site of the pattern, not a decorative backdrop
- **[IF MOTIFS APPEAR]** they must emerge through geometry rather than become illustration-first
- **[IF FIGURES / OBJECTS / ARCHITECTURE APPEAR]** faces, bodies, posture, object logic, and environment logic must all be reorganized through kolam order, not realism

Keep:

- threshold logic
- grid intelligence
- continuous line behavior
- symmetry
- powder-drawn feel
- geometric discipline
- auspicious activation
- whole-frame consistency

Avoid:

- generic rangoli
- mandala drift
- freehand decorative flourish
- graphic-design finish
- paint-like or vector-like line

- surface ornament with no threshold function
- realism with kolam accents added later

The final result must feel like a true Tamil kolam threshold system, not a decorative pattern image wearing kolam cues.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Kolam Geometry from Tamil Nadu**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through kolam grammar. Replace generic patterning with dot-grid construction. Replace decorative linework with continuous loop-and-path intelligence. Replace surface ornament with threshold-based geometric activation. Replace permanent graphic finish with powder-drawn floor-marking behavior. Replace neutral placement with entrance, courtyard, or transition-zone logic.

If the image includes motifs, keep them subordinate to the geometric system. If it includes figures, objects, architecture, or environment, they must also be reorganized through kolam's threshold, grid, line, and symmetry logic rather than remain generic under a kolam surface layer.

Do not simply add a nice floor design to the source image. Do not keep realism underneath. Do not let the pattern behave like decorative graphics. The final result must feel as if the original image has been fully reauthored inside the true source-truth Tamil kolam system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **creative artisan translation of Kolam Geometry from Tamil Nadu**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more imaginative, more dimensional 2D + 3D hybrid visual system**.

Keep the core Kolam grammar fully unchanged: threshold identity, ground-plane logic, dot-grid structural intelligence, continuous line-and-loop behavior, symmetry, powder-drawn memory, auspicious threshold activation, and kolam-born compositional DNA. Do not turn this into generic decorative geometry, floor-art mockup, branding pattern, vector design, color spectacle, or realism with a kolam pattern placed on top.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal threshold pattern description, but it must also not become full realistic scene-world depth. It should become a **creative hybrid geometric style-image** where kolam's own internal threshold order generates richer form, stronger visual invention, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and relations must all be rebuilt through kolam's grid, path, and symmetry intelligence. If objects appear, they must be shaped through threshold geometry, loop logic, and auspicious ordering. If environment appears, it must grow from kolam's spatial discipline rather than remain generic. The threshold-geometric system must become the larger organizing intelligence, not just a pattern spread across a surface.

Dimensionality must come from kolam itself: from dot-grid order, line continuity, loop-and-knot negotiation, symmetry, interval control, powder-mark logic, threshold activation, and geometric repetition-with-variation. Do not solve dimensionality through generic rendering habits, lifestyle interiors, festive color styling, or a normal realistic scene with a decorative kolam.

Do not create:

decorative floor-art mockup, vector-pattern exercise, branding geometry, festival-color reinterpretation, or a generic dimensional image decorated later by Kolam Geometry.

The final result must feel like **the same Kolam grammar has entered a richer, more imaginative, more dimensional artisan translation without losing itself.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / FIGURAL SYSTEM / GEOMETRIC WORLD]** in the **creative artisan translation of Kolam Geometry from Tamil Nadu.**

Keep unchanged:

- threshold identity
- ground-plane logic
- dot-grid structural intelligence
- continuous line-and-loop behavior
- symmetry and mathematical order
- powder-drawn memory
- auspicious threshold activation
- kolam compositional DNA
- whole-frame style consistency

Translate it into a richer dimensional hybrid visual system like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN GEOMETRIC FIELD]** becomes a kolam-built presence with more dimensional life, but still controlled by threshold and grid order
- **[SECONDARY FORMS / SUPPORT FIELDS]** also transform through the same kolam grammar rather than generic styling
- **[GRID / LOOP / KNOT / INTERLACE / CURVE / PATH SYSTEMS]** become more spatially alive and structurally expressive while remaining hand-performed and mathematically resolved
- **[IF MOTIFS APPEAR]** they must stay geometry-born, not illustration-first
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be rebuilt through kolam order
- **[IF ENVIRONMENT APPEARS]** it must grow from threshold geometry, symmetry, and auspicious spatial activation rather than realism

Increase:

- dimensional presence
- visual richness
- artisan-like reinterpretation
- hybrid 2D + 3D form
- structural clarity
- whole-frame transformation
- imaginative geometric spatial layering

Do not use:

- decorative mockup logic
- vector-graphic logic
- festival-color spectacle
- texture-only translation
- realistic environment with one floor pattern
- generic environment with kolam overlay
- only the ground surface carrying the style

Success condition:

the result feels like the same Kolam style has been artistically translated into a richer dimensional hybrid system.

Failure condition:

the result feels like a generic dimensional image decorated later by Kolam Geometry.

Image-to-Image

Convert this source image into the **creative artisan translation of Kolam Geometry from Tamil Nadu**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through kolam's internal grammar translated into a richer, more dimensional 2D + 3D hybrid visual system.

Replace generic spatial design with threshold logic. Replace ordinary patterning with dot-grid and continuous-line intelligence. Replace decorative flourishes with loop-and-knot structure. Replace surface ornament with auspicious spatial activation. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through kolam geometry, not realism. If objects or environment are present, they must also be rebuilt through kolam's internal order instead of remaining generic.

Let the image gain more dimensional life, richer geometric form, more imaginative layering, and stronger whole-frame coherence. But do not turn it into floor-art concept design, branding geometry, or realism with kolam decoration added afterward.

Do not style only the pattern surface. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through a creative artisan translation of Kolam Geometry**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **fully resolved believable real-world 3D translation of Kolam Geometry from Tamil Nadu**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable volumetric world**.

Keep the same deep Kolam visual intelligence fully unchanged: threshold identity, ground-plane logic, dot-grid structural intelligence, continuous line-and-loop behavior, symmetry and mathematical order, powder-based floor-marking memory, auspicious threshold activation, and kolam-born compositional logic. Do not turn this into generic domestic realism, decorative floor-design realism, festive lifestyle imagery, or cinematic scene illustration with a kolam pattern added on top.

Now convert that same grammar into a believable volumetric world. The result must have believable spatial order, believable material behavior, believable object presence, believable environmental completion, believable scene logic, and believable three-dimensional world structure. But every visible part of the image must still be generated by Kolam grammar.

If figures are present, they must be rebuilt through kolam-born structure, not normal realism standing over a patterned floor. If objects appear, they must be shaped through threshold order, grid logic, loop intelligence, and auspicious balance. If environment appears, it must be generated by entry-zone logic, ground-plane geometry, line-flow order, and threshold activation. The world must not become ordinary reality with a kolam inserted into it.

Depth must now become full scene-world depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in the floor pattern, threshold band, or ornamental surface. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **Kolam Geometry itself has become a believable full world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED KOLAM WORLD]** in the **fully resolved believable real-world 3D translation of Kolam Geometry from Tamil Nadu.**

Keep unchanged:

- threshold identity
- ground-plane logic
- dot-grid structural intelligence
- continuous line-and-loop behavior
- symmetry and mathematical order
- powder-drawn memory
- auspicious threshold activation
- kolam compositional DNA
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN GEOMETRIC FIELD]** becomes a fully embodied kolam-built presence with believable threshold-world logic
- **[SECONDARY FORMS / SUPPORT FIELDS]** also remain under the same kolam-born logic
- **[GRID / LINE / LOOP / KNOT / INTERVAL / THRESHOLD ZONES]** become volumetric world-organizing elements still governed by hand-performed geometric order
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by kolam threshold intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all remain kolam-born, not realism-first

Increase:

- volumetric world-building
- spatial separation

- scene completeness
- object presence
- environmental orchestration
- full-frame readability
- threshold-to-world transformation

Do not lose:

- threshold function
- grid order
- continuous line logic
- loop intelligence
- symmetry
- powder-drawn ephemerality
- auspicious activation
- whole-frame kolam identity

Do not use:

- realistic domestic scene with one kolam
- generic cinematic illustration
- style-as-floor-pattern only
- style-as-threshold decoration only
- style-as-surface geometry only
- premium finish overpowering source grammar
- reality with kolam flavor added later

Success condition:

the result feels like Kolam Geometry itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with Kolam Geometry.

Image-to-Image

Convert this source image into the **fully resolved believable real-world 3D translation of Kolam Geometry from Tamil Nadu**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through Kolam's source grammar translated into **full world-depth**.

Replace generic forms with kolam-built volumetric presences. Replace ordinary surfaces with threshold-geometric construction. Replace generic decorative order with dot-grid intelligence, continuous line logic, symmetry, and loop-based organization. Replace domestic realism with auspicious threshold-world structure. Replace generic environment

space with a believable scene-world shaped by kolam field intelligence. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through Kolam grammar, not realism.

Allow the result to gain complete volumetric embodiment, stronger spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with Kolam added later. The whole world must remain kolam-born.

Do not stylize only the floor pattern while leaving the rest of the world generic. Do not make it a domestic lifestyle realism scene. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable volumetric world generated by Kolam Geometry itself.**
