

Sanjhi - Uttar Pradesh

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Sanjhi from Uttar Pradesh**, treating it as a **Mathura–Vrindavan-rooted devotional paper-stenciling system** built through **hand-cut stencil construction**, **Krishna-centered iconography**, **evening temple-rangoli practice**, **filled pattern fields using color and ritual materials**, and **Braj sacred-image intelligence**.

Build the image as if it genuinely belongs inside the native Sanjhi practice itself. The image must be governed first by **stencil precision**, **cut-edge clarity**, **negative-space planning**, **filled-field devotional construction**, and **ground-image ritual order**, not by generic rangoli, generic paper cutting, decorative stencil craft, or realism-first sacred illustration.

The image must feel as if every major form was first solved as a paper stencil: clean silhouettes, structurally believable internal openings, controlled bridges, linked voids, and cut-planned shape logic. The final image must then feel completed through filled fields using materials like dry color, petals, mirror pieces, stones, or foil-like devotional fill, not through brush shading or painted realism. The result must feel additive inside bounded shapes, not modeled like ordinary illustration.

The subject world must remain specifically **Braj devotional**: Krishna, Radha, Krishna leelas, peacocks, floral sacred motifs, Vrindavan love symbolism, and temple-rangoli sacred imagery. Figures and motifs must feel stencil-born, not realism-drawn. The surface must feel suitable for **temple floor display** or sacred ground composition, not framed decorative art first.

The composition must remain crisp, patterned, and devotionally readable at first glance. It must feel like a sacred field of cut-and-filled image intelligence, not a loose decorative arrangement.

Do not make this generic rangoli, generic paper craft, mandala-like ornament, decorative Krishna stencil design, or realism with Sanjhi motifs pasted on top. The final result must feel like **the real Sanjhi system itself made the whole image**.

Reusable Variable Template

Create **[SUBJECT / DEVOTIONAL GROUND IMAGE / STENCIL FIELD / KRISHNA-BRAJ SACRED IMAGE]** in the **pure authentic source-truth visual logic** of Sanjhi from Uttar Pradesh.

Style system that must remain unchanged:

- devotional temple-rangoli identity
- paper-stencil identity
- cut-edge and negative-space intelligence
- filled-field material logic
- Krishna–Braj iconographic authority
- ground-image clarity
- whole-frame Sanjhi consistency

Translate the image like this:

- **[MAIN FIGURE / MAIN SYMBOL / MAIN SACRED CENTER]** becomes a Sanjhi-built devotional form governed by stencil-cut order
- **[OUTER SILHOUETTES / INNER CUT SPACES / BRIDGES / OPENINGS]** must feel structurally cut-planned, not drawn freely
- **[FILLED AREAS / COLOR ZONES / PETAL OR FOIL-LIKE REGIONS]** must feel additive inside the stencil boundaries, not brush-painted
- **[KRISHNA / RADHA / PEACOCK / FLORAL / BRAJ MOTIFS]** must feel stencil-native and devotionally specific
- **[GROUND OR FIELD RELATION]** must feel suitable for temple-rangoli display, not floating decorative design
- **[IF FIGURES / OBJECTS / ARCHITECTURE APPEAR]** faces, bodies, posture, object logic, and environment logic must all be reorganized through Sanjhi stencil-and-fill order, not realism

Keep:

- stencil-first construction
- cut-edge clarity
- negative-space planning
- filled-field devotion
- Braj sacred specificity
- ground-image order
- crisp devotional readability
- whole-frame consistency

Avoid:

- generic rangoli
- generic paper cutwork
- laser-cut décor look
- decorative stencil graphics
- realism-first sacred illustration
- painted shading instead of fill logic

- generic Krishna ornament
- realism with Sanjhi accents added later

The final result must feel like a true Mathura–Vrindavan devotional stencil-rangoli system, not a decorative sacred pattern image.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Sanjhi from Uttar Pradesh**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through Sanjhi grammar. Replace free drawing with stencil-cut construction. Replace ordinary contour with cut-edge logic. Replace painterly rendering with bounded filled fields. Replace generic sacred imagery with Krishna–Braj devotional specificity. Replace decorative composition with temple-ground-image order.

If the image includes figures, make them feel silhouette-born and stencil-native. If the image includes motifs, make them structurally integrated into cut-and-fill pattern logic. If the image includes space or environment, it must also feel reorganized through devotional rangoli-field intelligence rather than remain generic.

Do not simply add floral cutwork or Krishna motifs to the source image. Do not keep realism underneath. Do not let the image behave like a painted illustration with stencil decoration. The final result must feel as if the original image has been fully reauthored inside the true source-truth Sanjhi system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **creative artisan translation of Sanjhi from Uttar Pradesh**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more imaginative, more dimensional 2D + 3D hybrid visual system**.

Keep the core Sanjhi grammar fully unchanged: devotional temple-rangoli identity, paper-stencil identity, cut-edge and negative-space intelligence, filled-field material logic, Krishna–Braj iconographic authority, ground-image order, and Sanjhi-born compositional DNA. Do not turn this into decorative stencil concept art, laser-cut pattern styling, generic

sacred graphic design, premium craft ornament, or realism with Krishna stencil motifs layered on top.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal stencil-rangoli documentation, but it must also not become full realistic scene-world depth. It should become a **creative hybrid stencil-born sacred-image system** where Sanjhi's own cut-and-fill intelligence generates richer form, stronger visual invention, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and relationships must all be rebuilt through Sanjhi's stencil logic. If objects appear, they must be shaped through cut-edge order, filled-field intelligence, and Braj devotional hierarchy. If environment appears, it must grow from temple-rangoli and stencil-field logic rather than remain generic. The stencil system must become the larger organizing intelligence, not just a decorative overlay.

Dimensionality must come from Sanjhi itself: from stencil precision, negative-space balance, filled pattern fields, Krishna–Braj symbolism, floral-peacock sacred order, and rangoli-ground-image planning. Do not solve dimensionality through generic rendering habits, decorative paper-art aesthetics, or a normal image with one stencil-like treatment applied on top.

Do not create:

decorative stencil mockup, laser-cut concept render, sacred paper-pattern branding, generic rangoli beauty styling, or a generic dimensional image decorated later by Sanjhi.

The final result must feel like **the same Sanjhi grammar has entered a richer, more imaginative, more dimensional artisan translation without losing itself.**

Reusable Variable Template

Create [SUBJECT / IMAGE / DEVOTIONAL STENCIL WORLD / KRISHNA-BRAJ PATTERN FIELD] in the **creative artisan translation of Sanjhi from Uttar Pradesh.**

Keep unchanged:

- devotional temple-rangoli identity
- paper-stencil identity
- cut-edge and negative-space intelligence
- filled-field material logic
- Krishna–Braj iconographic authority
- ground-image logic
- Sanjhi compositional DNA
- whole-frame style consistency

Translate it into a richer dimensional hybrid visual system like this:

- **[MAIN FIGURE / MAIN SACRED CENTER / MAIN PATTERN FIELD]** becomes a Sanjhi-built presence with more dimensional life, but still governed by stencil precision and devotional field order
- **[SECONDARY MOTIFS / SUPPORT FIGURES / BORDER STRUCTURES / FILL ZONES]** also transform through the same Sanjhi grammar rather than generic styling
- **[CUTS / OPENINGS / BRIDGES / EDGES / NEGATIVE SPACES]** become more spatially alive and structurally expressive while remaining stencil-native
- **[FILLED AREAS / MATERIAL ZONES / COLOR OR PETAL-LIKE FIELDS]** must remain bounded, additive, and pattern-led
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, object logic, and environment logic must all be rebuilt through Sanjhi order
- **[IF ENVIRONMENT APPEARS]** it must grow from devotional ground-image logic, stencil-field order, and Braj symbolism rather than realism

Increase:

- dimensional presence
- visual richness
- artisan-like reinterpretation
- hybrid 2D + 3D form
- structural clarity
- whole-frame transformation
- imaginative stencil spatial layering

Do not use:

- generic paper-cut décor logic
- laser-cut craft styling
- sacred graphic-design logic
- generic rangoli-beautification
- realism with one stencil zone
- generic environment with Sanjhi overlay
- only motif carrying the style

Success condition:

the result feels like the same Sanjhi style has been artistically translated into a richer dimensional hybrid system.

Failure condition:

the result feels like a generic dimensional image decorated later by Sanjhi.

Image-to-Image

Convert this source image into the **creative artisan translation of Sanjhi from Uttar Pradesh**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through Sanjhi's internal grammar translated into a richer, more dimensional 2D + 3D hybrid visual system.

Replace generic drawing with stencil-cut image construction. Replace ordinary composition with negative-space planning and filled-field hierarchy. Replace decorative sacred motifs with Krishna–Braj devotional structure. Replace scenic layout with rangoli-ground-image order. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through Sanjhi stencil logic, not realism. If objects or environment are present, they must also be rebuilt through Sanjhi's internal order instead of remaining generic.

Let the image gain more dimensional life, richer stencil form, more imaginative layering, and stronger whole-frame coherence. But do not turn it into paper-craft concept art, generic stencil ornament, or realism with Sanjhi decoration added afterward.

Do not style only the decorative surface. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through a creative artisan translation of Sanjhi.**

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **fully resolved believable real-world 3D translation of Sanjhi from Uttar Pradesh**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable volumetric world**.

Keep the same deep Sanjhi visual intelligence fully unchanged: devotional temple-rangoli identity, paper-stencil identity, cut-edge and negative-space intelligence, filled-field material logic, Krishna–Braj iconographic authority, ground-image order, and Sanjhi-born compositional logic. Do not turn this into generic temple realism, decorative stencil realism, generic Krishna realism, or a normal world with one Sanjhi-like rangoli added on top.

Now convert that same grammar into a believable volumetric world. The result must have believable spatial order, believable material behavior, believable object presence, believable environmental completion, and believable three-dimensional world logic. But every visible part of the image must still be generated by Sanjhi grammar.

If figures are present, they must be rebuilt through Sanjhi-born stencil structure, not normal realism standing inside a decorated temple floor. If objects appear, they must be shaped through cut-edge order, filled-field intelligence, and Braj devotional hierarchy. If environment appears, it must be generated by stencil-field planning, ground-image sacred order, Krishna–Vrindavan symbolic structure, and rangoli-based world construction. The world must not become ordinary reality with one Sanjhi insert into it.

Depth must now become full scene-world depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in one floor pattern, one border band, one silhouette, or one decorative cut zone. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **Sanjhi itself has become a believable full world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED SANJHI WORLD]** in the **fully resolved believable real-world 3D translation of Sanjhi from Uttar Pradesh.**

Keep unchanged:

- devotional temple-rangoli identity
- paper-stencil identity
- cut-edge and negative-space intelligence
- filled-field material logic
- Krishna–Braj iconographic authority
- ground-image order
- Sanjhi compositional DNA
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN SACRED CENTER / MAIN STENCIL FIELD]** becomes a fully embodied Sanjhi-built presence with believable devotional-stencil-world logic
- **[SECONDARY FORMS / SUPPORT FIGURES / PATTERN FIELDS / BORDER OR MOTIF ZONES]** also remain under the same Sanjhi-born logic
- **[CUTS / OPENINGS / VOID RELATIONS / FILLED SURFACES / GROUND FIELDS]** become volumetric world-organizing elements still governed by stencil-and-fill structure
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by Sanjhi devotional intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, object logic, and environment logic must all remain Sanjhi-born, not realism-first

Increase:

- volumetric world-building
- spatial separation
- scene completeness

- object presence
- environmental orchestration
- full-frame readability
- stencil-to-world transformation

Do not lose:

- stencil precision
- negative-space order
- filled-field devotional logic
- Krishna–Braj specificity
- temple-ground-image identity
- crisp sacred readability
- whole-frame Sanjhi identity

Do not use:

- realistic temple courtyard with one rangoli
- generic cinematic illustration
- style-as-floor-pattern only
- style-as-paper-cut only
- style-as-sacred motif only
- style-as-surface ornament only
- premium finish overpowering source grammar
- reality with Sanjhi flavor added later

Success condition:

the result feels like Sanjhi itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with Sanjhi.

Image-to-Image

Convert this source image into the **fully resolved believable real-world 3D translation of Sanjhi from Uttar Pradesh**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through Sanjhi's source grammar translated into **full world-depth**.

Replace generic forms with Sanjhi-built volumetric presences. Replace ordinary surfaces with stencil-and-fill construction. Replace generic decorative order with cut-edge precision, negative-space planning, bounded filled fields, Krishna–Braj symbolic hierarchy, and temple-ground-image logic. Replace realism-first sacred staging with Sanjhi-born

devotional-world order. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through Sanjhi grammar, not realism.

Allow the result to gain complete volumetric embodiment, stronger spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with Sanjhi added later. The whole world must remain Sanjhi-born.

Do not stylize only one floor pattern, border, or stencil zone while leaving the rest of the world generic. Do not make it a temple-realism scene with a decorative insert. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable volumetric world generated by Sanjhi itself.**
