

stone carving - Odisha

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Odisha stone carving**, treating it as an **Odisha temple-derived sculptural stone system** built through **carved mass, relief intelligence, sacred and architectural figure logic, icon-bearing silhouette, chisel-defined ornament, and stone-specific material authority**.

Build the image as if it genuinely belongs inside the native Odisha temple-carving world itself. The image must be governed first by **stone mass, relief hierarchy, sacred and architectural sculptural order, and chisel-born form**, not by generic statue realism, smooth cast-object styling, souvenir carving, or surface motifs added later. Form must feel released from stone through carving, not assembled from realism and then decorated.

The figure or object must feel mass-led and relief-aware. Sacred figures, temple-derived forms, Konark-linked motifs, female sculptural figures, animals, wheels, horses, shrine elements, and architectural carving must feel like they are built through Odisha temple-sculpture logic rather than through ordinary realism. Faces should feel formal and iconically stabilized, not portrait-real. Bodies should feel sculpturally composed, not casually naturalistic. Ornament must feel carved into the body, not placed on top of it.

Stone must behave like stone: weight-bearing, tactile, carved, chisel-shaped, and materially specific. Plane changes, cuts, incisions, carved ridges, recesses, and relief depths must remain active. Even when refined, the image must still feel stone-born rather than polished into generic décor. If the object is architectural, it should retain monument logic. If it is figural, it should retain sacred-sculptural authority. If drapery, jewelry, floral, animal, or symbolic details appear, they must all remain subordinate to carved form logic.

Do not make this generic stone craft, garden statue realism, cast-like smooth sculpture, decorative motif on plain stone mass, souvenir object with Odisha temple flavor, or realism with Odisha temple motifs pasted later. The final result must feel like **the real Odisha temple-carving system itself made the whole image**.

Reusable Variable Template

Create **[SUBJECT / SCULPTURAL OBJECT / FIGURAL STONE IMAGE / TEMPLE-DERIVED FORM]** in the **pure authentic source-truth visual logic of Odisha stone carving**.

Style system that must remain unchanged:

- carved mass identity
- relief hierarchy
- sacred and architectural figure logic
- icon-bearing silhouette
- chisel-defined ornament
- stone-specific material authority
- temple-derived sculptural order
- whole-frame Odisha stone-carving consistency

Translate the image like this:

- **[MAIN FORM / MAIN FIGURE / MAIN OBJECT]** becomes an Odisha stone-carving-built presence governed by carved mass and relief structure
- **[PRIMARY BODY OR CORE MASS]** remains sculpturally weight-bearing and chisel-shaped
- **[RELIEF ZONES / RECESSED AREAS / INCISION SYSTEMS]** remain active and structurally meaningful
- **[ORNAMENT / DRAPERY / JEWELRY / SYMBOLIC DETAIL / ARCHITECTURAL DETAIL]** feels carved into the stone-body, not added later
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be reorganized through Odisha temple-sculpture logic, not realism
- **[IF ARCHITECTURAL OR ENVIRONMENTAL ELEMENTS APPEAR]** they must feel monument-derived and relief-aware

Keep:

- carved mass
- relief depth
- sacred / architectural icon logic
- strong silhouette
- chisel memory
- stone material authority
- whole-frame consistency

Avoid:

- generic stone craft
- smooth realism-first statue
- cast-like finish
- decorative motif on plain mass
- souvenir carving mood
- realism with Odisha temple accents added later

The final result must feel like a true Odisha temple-derived stone system, not a modern stone object wearing Odisha cues.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Odisha stone carving**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through Odisha stone-carving grammar. Replace generic object or figure logic with carved mass. Replace ordinary depth with relief hierarchy. Replace surface detail with chisel-defined ornament. Replace realism-first anatomy with sacred-sculptural construction. Replace decorative styling with temple-derived sculptural order.

If the image includes figures, rebuild faces, bodies, posture, silhouette, drapery, and ornament through Odisha temple-carving logic. If it includes wheels, horses, shrine forms, floral carvings, animals, or architectural motifs, make them feel monument-born and stone-resolved. If environment appears, it must also feel generated by carved mass and relief logic, not generic scenery.

Do not simply add Odisha temple motifs to a realistic statue or object. Do not keep realism underneath. Do not let the carving behave like surface texture on a smooth base. The final result must feel as if the original image has been fully reauthored inside the true source-truth Odisha stone-carving system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **creative artisan translation of Odisha stone carving**, preserving the same deep source grammar as the authentic source-truth version, but translating it into a **richer, more imaginative, more dimensional 2D + 3D hybrid visual system**.

Keep the core Odisha stone-carving grammar fully unchanged: carved mass identity, relief hierarchy, sacred and architectural figure logic, icon-bearing silhouette, chisel-defined ornament, stone-specific material authority, and temple-derived compositional order. Do not turn this into generic statue render, museum-object mockup, material-texture exercise, embossing effect, surface-relief imitation, or realism with Odisha temple styling added on top.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal carved-object description, but it must also not become full realistic scene-world depth. It should become a **creative hybrid style-image** where Odisha stone carving's own internal sculptural order generates richer form, stronger visual invention, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and figure relations must all be rebuilt through Odisha temple-sculpture logic. If objects appear, they must be shaped through carved mass, relief hierarchy, and icon-bearing structure. If environment appears, it must grow from monument-derived sculptural order rather than remain generic. The sculptural stone logic must become a larger organizing intelligence, not just surface carving on top of a normal image.

Dimensionality must come from Odisha stone carving itself: from mass articulation, relief steps, sacred icon logic, temple-derived ornament, chisel-cut planes, sculptural rhythm, and architectural framing. Do not solve dimensionality through generic rendering habits, normal anatomy, realistic environmental lighting, or a generic environment with carved stone texture added on top.

Do not create:

stone-object mockup, material showcase, embossing, relief texture exercise, generic 3D statue render, or a generic dimensional image decorated later by Odisha temple carving.

The final result must feel like **the same Odisha stone-carving grammar has entered a richer, more imaginative, more dimensional artisan translation without losing itself.**

Reusable Variable Template

Create **[SUBJECT / IMAGE / FIGURAL SYSTEM / SCULPTURAL WORLD]** in the **creative artisan translation of Odisha stone carving.**

Keep unchanged:

- carved mass identity
- relief hierarchy
- sacred and architectural figure logic
- icon-bearing silhouette
- chisel-defined ornament
- stone material authority
- temple-derived compositional DNA
- whole-frame style consistency

Translate it into a richer dimensional hybrid visual system like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN OBJECT]** becomes an Odisha stone-carving-built presence with more dimensional life, but still controlled by carved mass and relief logic
- **[SECONDARY FORMS / SUPPORT FIELDS]** also transform through the same Odisha stone-carving grammar rather than generic styling
- **[RELIEF / RECESS / INCISION / ORNAMENT / ARCHITECTURAL FRAMING]** become more spatially alive and structurally expressive while remaining stone-carved
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all be rebuilt through Odisha temple-sculpture order
- **[IF ENVIRONMENT APPEARS]** it must grow from carved mass, relief depth, and architectural sculptural logic rather than realism

Increase:

- dimensional presence
- visual richness
- artisan-like reinterpretation
- hybrid 2D + 3D form
- structural clarity
- whole-frame transformation
- imaginative spatial layering

Do not use:

- museum-object mockup logic
- surface-texture-only translation
- embossing or relief tricks
- generic statue rendering
- realistic anatomy with carved motifs
- generic environment with Odisha stone overlay
- only object surface carrying the style

Success condition:

the result feels like the same Odisha stone-carving style has been artistically translated into a richer dimensional hybrid system.

Failure condition:

the result feels like a generic dimensional image decorated later by Odisha stone carving.

Image-to-Image

Convert this source image into the creative artisan translation of Odisha stone carving.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through Odisha stone carving's internal grammar translated into a richer, more dimensional 2D + 3D hybrid visual system.

Replace generic form behavior with carved mass. Replace ordinary depth with relief hierarchy. Replace surface decoration with chisel-defined sculptural articulation. Replace realism-first anatomy with sacred and architectural figure construction. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through Odisha temple-carving logic, not realism. If objects or environment are present, they must also be rebuilt through carved mass, relief order, and temple-derived structure instead of remaining generic.

Let the image gain more dimensional life, richer sculptural form, more imaginative layering, and stronger whole-frame coherence. But do not turn it into a statue render, embossed stone object, or realism with Odisha temple motifs added afterward.

Do not style only the carved surface. Do not leave the rest of the frame generic. The final result must feel like the source image has been fully reauthored through a creative artisan translation of Odisha stone carving.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **fully resolved believable real-world 3D translation of Odisha stone carving**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable volumetric world**.

Keep the same deep Odisha stone-carving visual intelligence fully unchanged: carved mass identity, relief hierarchy, sacred and architectural figure logic, icon-bearing silhouette, chisel-defined ornament, stone-specific material authority, and temple-derived compositional logic. Do not turn this into generic heritage realism, generic statue realism, decorative temple mood, or cinematic scene illustration with carved motifs added on top.

Now convert that same grammar into a believable volumetric world. The result must have believable volume, believable carved-stone material behavior, believable light on mass and relief, believable spatial separation, believable object presence, and believable three-dimensional world logic. But every visible part of the image must still be generated by Odisha stone-carving grammar.

If figures are present, they must be rebuilt through Odisha stone-carving-born structure, not normal anatomy beside temple-style ornament. If objects appear, they must be shaped through carved mass and relief law. If environment appears, it must be generated by sacred-architectural icon logic, temple-derived compositional order, and chisel-born sculptural organization. The world must not become ordinary reality with a carved Odisha object inserted into it.

Depth must now become full scene-world depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in motifs, props, or carved object zones. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **Odisha stone carving itself has become a believable full world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED ODISHA STONE-CARVING WORLD]** in the **fully resolved believable real-world 3D translation of Odisha stone carving.**

Keep unchanged:

- carved mass identity
- relief hierarchy
- sacred and architectural figure logic
- icon-bearing silhouette
- chisel-defined ornament
- stone material authority
- temple-derived compositional DNA
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN GROUP / MAIN OBJECT]** becomes a fully embodied Odisha stone-carving-built presence with believable carved-stone material behavior and relief structure
- **[SECONDARY FORMS / SUPPORT FIELDS]** also remain under the same Odisha stone-carving-born logic
- **[RELIEF / MASS / ARCHITECTURAL FRAMING / ICONIC ORNAMENT / SCULPTURAL ZONES]** become volumetric world-organizing elements still governed by chisel-born structure
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by Odisha temple-sculptural intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, silhouette, object logic, and environment logic must all remain Odisha stone-carving-born, not realism-first

Increase:

- volumetric world-building
- carved-stone material-light interaction
- spatial separation
- scene completeness
- object presence

- environmental orchestration
- full-frame readability

Do not lose:

- carved mass
- relief hierarchy
- sacred / architectural icon law
- chisel-defined ornament
- stone material authority
- Odisha stone-carving world organization
- whole-frame Odisha stone-carving identity

Do not use:

- realistic heritage scene
- generic cinematic illustration
- style-as-object only
- style-as-ornament only
- style-as-temple motif only
- premium finish overpowering source grammar
- reality with Odisha temple flavor added later

Success condition:

the result feels like Odisha stone carving itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with Odisha stone carving.

Image-to-Image

Convert this source image into the **fully resolved believable real-world 3D translation of Odisha stone carving**.

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through Odisha stone carving's source grammar translated into **full world-depth**.

Replace generic forms with Odisha stone-carving-built volumetric presences. Replace ordinary surfaces with carved mass and relief construction. Replace generic decorative order with sacred and architectural icon law. Replace realism-first material behavior with chisel-born stone authority. Replace generic environment space with a believable scene-world shaped by Odisha stone-carving field intelligence. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through Odisha stone-carving grammar, not realism.

Allow the result to gain complete volumetric embodiment, stronger carved-stone material-light interaction, spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with Odisha stone carving added later. The whole world must remain Odisha stone-carving-born.

Do not stylize only the carved object or motif while leaving the rest of the world generic. Do not make it a heritage-tourism realism scene. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable volumetric world generated by Odisha stone carving itself.**
