

Appliqué (Katab) - Gujarat

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Katab appliqué from Gujarat as a patch-built textile construction system.

Treat this as cut cloth assembled onto a base cloth, not as embroidery-first work, not as mirror-work, not as printed geometric fabric, and not as random patchwork.

Build the entire image as if it is generated from real Katab intelligence:

base cloth plus applied cloth pieces,
cut fabric units as the main image-building elements,
clear patch edges,
stitched attachment of shapes onto a support surface,
planned geometric and symmetrical composition,
color-blocked cloth fields,
domestic and ceremonial textile-use identity,
Kathiawad-family placement while remaining appliqué-distinct.

The image must read through cloth pieces meeting cloth pieces.

The visual lines must come from patch boundaries more than from thread-drawn outlines.

The surface must feel assembled, not painted, not printed, and not embroidered first.

Use shape-built composition such as triangles, squares, strips, and fitted patch units.

Let the surface feel like a textile jigsaw with deliberate symmetry and design planning.

If layered cloth thickness is visible, it should feel like real stacked textile pieces, not fake 3D decoration.

If humans, animals, trees, props, architecture, ground, objects, or environment are present, rebuild all of them through Katab patch logic so the whole frame feels born from cut-cloth construction, fitted edges, color-blocked surfaces, and geometric planning, not like a normal scene with one appliqué patch inserted later.

Human skin and faces must remain clean and readable.

The style must enter through patch-built segmentation, cloth edges, assembled color fields, geometric planning, and textile-surface order across the whole image.

Avoid:

embroidery-first logic,
mirror-work styling,
printed geometric cloth,
random patchwork mood,
painted folk pattern,

one Katab patch inside an unrelated world,
surface-only decoration.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Katab appliqué from Gujarat.

Treat the style as a patch-built textile system made from cut cloth pieces attached onto a base, not as embroidery-first decoration.

Core style lock:

cut fabric units as primary image elements,
base cloth plus applied patches,
clear piece boundaries,
geometric and symmetrical planning,
color-blocked cloth surfaces,
edge-led construction,
Kathiawad-family placement with appliqué distinctness,
whole-frame Katab consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a Katab-built textile presence made from fitted cloth pieces.

[HUMANS] are rebuilt through patch-built garment fields, cut-shape segmentation, and assembled cloth logic; skin stays clean and human.

[ANIMALS] are rebuilt through fitted cloth shapes, edge-led contour, and color-blocked patch construction rather than generic realism.

[TREES / FOLIAGE] are rebuilt through patch clusters, fitted leaf-mass shapes, and geometric textile assembly instead of natural leaf realism.

[OBJECTS / GROUND / ARCHITECTURE] inherit cloth-piece construction, joined patch surfaces, and color-blocked assembled order.

[ENVIRONMENT] becomes a Katab textile world rather than generic realism.

Keep:

cut cloth as the primary image unit,
patch-built construction,
geometric and symmetrical planning,
assembled textile logic,
domestic and ceremonial cloth identity.

Avoid:

thread-first embroidery,
mirror-work,
painted decoration,
printed pattern,

casual patchwork mood,
one correct appliqué object inside an unrelated image.

Image-to-Image

Convert this source image into the authentic visual world of Katab appliqué from Gujarat.

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through Katab patch-built textile grammar.

Replace ordinary surfaces with cut cloth units attached onto a base.

Replace drawn outlines with patch boundaries.

Replace generic decoration with fitted fabric shapes.

Replace smooth surface transitions with assembled cloth fields and stitched patch logic.

Replace realism-first modeling with geometric or symmetrical patch-built planning.

If the source contains people, animals, trees, props, objects, architecture, ground, or environment, convert all of them so they feel generated by Katab appliqué intelligence instead of remaining normal realism.

Do not simply add one appliqué border or one patched garment.

Do not leave the environment generic.

Do not turn the result into embroidery, mirror-work, or printed geometric cloth.

The final image must feel like a real Katab construction system expanded across the whole frame.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image translation rooted in Katab appliqué from Gujarat.

This is not embroidery and not a full realistic world yet.

It must remain source-rooted in Katab grammar:

base cloth plus applied fabric pieces,

cut shapes as the main image units,

fitted patch boundaries,

geometric and symmetrical planning,

color-blocked cloth construction,

textile-surface assembly,

domestic and ceremonial textile logic.

Let the image gain dimensional body, layered cloth depth, stronger patch-edge readability, richer fabric tactility, more visible thickness in stacked cloth units, and more articulated relation between patch shapes and the base cloth.

But keep the image patch-field-first.

It should still feel like Katab textile intelligence is constructing the image, not generic realism.

Extend Katab across all elements:

humans are shaped through patch-built garment masses, fitted cloth segmentation, and assembled textile order;

animals are shaped through cut-cloth body construction and color-blocked patch logic;

trees are shaped through fitted cloth foliage masses and geometric textile clustering;

props, ground, and architecture are shaped through joined patch surfaces and edge-led cloth assembly.

Faces and skin stay readable and human.

No embroidery-first look.

No mirror-work shortcut.

No printed graphics pretending to be patches.

Avoid:

generic patchwork décor,

embroidery with patch accents,

flat printed geometric design,

painted folk pattern,

surface decoration added afterward,

normal realism with one Katab textile inserted.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Katab appliqué from Gujarat.

Preserve these source-core rules:

cut cloth remains primary,

patch-built construction remains structural,

geometric and symmetrical planning remains active,

piece boundaries remain important,

color-blocked textile logic remains visible,

the whole frame remains inside one Katab system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized Katab textile-image zone built from fitted cloth pieces.

[HUMANS] are rebuilt through cut-shape garment segmentation, assembled patch surfaces, and cloth-edge contour logic; skin remains clean.

[ANIMALS] are rebuilt through patch-built body zones and fitted fabric contouring.

[TREES / FOLIAGE] are rebuilt through clustered cut-fabric masses and assembled geometric textile surfaces.

[OBJECTS / GROUND / ARCHITECTURE] gain richer layering but remain governed by patch attachment, cloth joins, and color-blocked assembly.

[ENVIRONMENT] becomes a Katab image-field rather than generic realism.

Let these become richer:

cloth layering,
patch thickness,
edge readability,
surface tactility,
color-block segmentation,
image-body.

Keep unchanged:

cut cloth as primary image units,
patch-built construction,
geometric/symmetrical planning,
Katab distinctness from embroidery,
textile-use identity.

Avoid:

thread-first logic,
mirror-work,
printed pattern,
casual patchwork mood,
one Katab section inside an unrelated image.

Image-to-Image

Convert this source image into a creative 2D + 3D Katab translation from Gujarat.

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through Katab patch-built textile grammar.

Replace ordinary surfaces with fitted cloth pieces attached to a base.

Replace smooth graphic surfaces with layered fabric segmentation.

Replace drawn contours with patch boundaries.

Replace generic decoration with assembled color-block fields and textile construction logic.

Allow the image to gain layered cloth depth, richer patch tactility, stronger edge contrast, and more visible image-body.

But do not let it become full realism.

It must still behave like a dimensionalized Katab textile field.

Do not paste patch motifs onto a normal image.

Do not leave humans, trees, animals, or environment generic.
Do not turn it into embroidery, mirror-work, or print.

The result must feel like Katab cloth-construction logic has gained image-body across the whole frame.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D realistic dimensional world generated from Katab appliqué of Gujarat.

The realism must remain fully governed by Katab textile grammar, not by generic realism.

Build the whole world through:

base cloth plus applied fabric pieces,
cut shapes as the primary image units,
fitted patch boundaries,
stitched patch attachment,
color-blocked textile surfaces,
geometric and symmetrical planning,
domestic and ceremonial cloth intelligence.

The world must feel as if Katab appliqué intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one Katab system.

The surface must still feel piece-assembled, not embroidered first and not printed.

The visual lines must still come from cloth joins and patch boundaries.

The world must still feel textile-built.

Humans must be rebuilt through patch-built garment rhythm, cut-cloth segmentation, and assembled textile logic while skin remains clean and human.

Animals must be rebuilt through fitted fabric body construction and patch contouring.

Trees must be rebuilt through clustered cut-fabric masses and geometric foliage assembly.

Ground, props, and architecture must all inherit Katab patch intelligence.

Make the space fully volumetric and believable, but do not let realism erase the cut-cloth origin.

This is not normal realism with one appliqué textile.

This is Katab grammar becoming world structure.

Avoid:

generic premium patchwork realism,
embroidery-first styling,
mirror-work,

printed geometric pattern,
painted decoration,
one Katab patch inside a non-Katab world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Katab appliqué of Gujarat.

Style system that must remain unchanged:

cut fabric remains primary,
patch-built construction remains structural,
piece boundaries remain visible,
geometric and symmetrical planning remains active,
color-blocked textile assembly remains present,
whole-frame Katab consistency remains intact.

Translate the world like this:

[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional Katab-governed assembled textile presence.

[HUMANS] become volumetric but remain organized through patch-built garment rhythm, cloth-edge segmentation, and assembled surface order.

[ANIMALS] become volumetric but remain shaped by fitted fabric contour and cut-shape construction.

[TREES / FOLIAGE] become volumetric but remain organized through clustered patch masses and geometric textile assembly.

[OBJECTS / GROUND / ARCHITECTURE] continue to structure the world through patch attachment, cloth joins, and color-blocked surface logic.

[ENVIRONMENT] becomes a believable spatial field organized by Katab intelligence rather than generic realism.

Increase:

full spatial depth,
material presence,
cloth tactility,
patch continuity,
edge readability,
world completion.

Do not lose:

cut cloth as primary image units,
patch-built construction,
assembled textile logic,
Katab distinctness from embroidery,
domestic/ceremonial textile identity.

Avoid:

generic patchwork luxury,
embroidery simulation,
mirror-work shortcut,
printed cloth realism,
Katab as accent instead of world structure.

Image-to-Image

Convert this source image into a full 3D realistic Katab world from Gujarat.

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through Katab appliqué world grammar.

Replace normal realism with a world governed by base cloth, attached fabric pieces, fitted patch boundaries, stitched patch construction, color-blocked assembly, and geometric textile planning.

If the source contains figures, garments, props, objects, architecture, animals, trees, ground, or environment, convert all of them so they behave as if generated from Katab appliqué intelligence.

Keep the patch construction physically plausible.

Keep cloth joins visible and important.

Keep the whole frame organized by piece-assembled textile order rather than generic realistic arrangement.

Do not simply apply appliqué motifs over the image.

Do not leave secondary forms generic.

Do not turn it into embroidery, mirror-work, print, or casual patchwork.

The final result must feel like Katab itself generated the world.
