

Bidriware - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of **traditional Bidriware from Bidar, Karnataka**. Build the image as if it comes from a real Bidri craft world: a cast high-zinc alloy object, engraved with precise channels, inlaid with pure silver, and blackened into a deep luminous black so the silver stands out sharply. The image must read first as **Bidriware**, not as generic black metal, not as silver decoration on a dark object, not as engraved luxury ware, and not as modern premium product styling.

Use real construction logic. The world must be built through **cast metal form + engraved groove system + fitted silver inlay + blackened oxidized field**. Every visible motif, contour, border, floral unit, calligraphic rhythm, or object division must feel as if it has been **cut into the metal and filled with silver**, not painted on, printed on, etched superficially, laser-drawn, or pasted afterward.

Use real world-translation logic. Do not only change material. Rebuild **shape, edge behavior, value grouping, light behavior, shadow logic, space organization, form breakup, and ornament hierarchy** through Bidriware grammar. The black field must act like the primary visual ground. The silver must act like the main image-forming force. Figures, motifs, borders, and object divisions must all feel generated by **engraved-and-inlaid contrast logic**.

Use real surface logic. The image must feel like a **resolved metal surface world** where silver and black are structurally inseparable. Do not make it glossy chrome. Do not make it ceramic. Do not make it lacquered décor. Keep the finish heritage-rich, precise, and craft-resolved.

Use real object logic. The object must still feel like a Bidri heritage form or Bidri surface-world, not generic metalware. Keep the work culturally grounded, refined, contrast-led, and manually resolved.

Do not make it generic Islamic ornament on metal.

Do not make it black-coated silverware.

Do not make it engraving-only.

Do not make it realism-first metal décor.

Do not let any major element belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE]** in the authentic visual logic of **traditional Bidriware from Bidar, Karnataka**.

Treat the style as:

a blackened metal inlay system,
a cast-alloy heritage object language,
an engraved groove-and-silver insert world,
and a contrast-built image system where the black field and silver design together generate the full visual order.

Core style system to preserve:

- black oxidized ground identity
- silver inlay as the main image-forming force
- engraved groove construction
- fitted inlay precision
- surface-first Bidriware object logic
- heritage prestige-object feeling
- full-frame consistency so every visible element belongs to one Bidriware world

Translate the image like this:

- **[MAIN SUBJECT / MAIN FORM]** becomes a Bidri-derived black-field form structured by engraved-and-inlaid silver design
- **[SECONDARY FORMS / SUPPORTING ELEMENTS]** also obey the same groove-and-inlay logic
- **[BORDERS / PANELS / DIVISIONS / ORNAMENTAL ZONES]** become contrast-led silver fields on black metal
- **[OBJECT BODY / CONTEXT / SUPPORT STRUCTURE]** must support Bidriware reading rather than generic metal realism

Shape logic:

keep forms organized by silver contour, black mass separation, engraved partitions, and inlay-led rhythm

Light and value logic:

keep the world controlled by black–silver contrast, not by generic metallic shading alone

Space logic:

keep the image surface-born and contrast-structured, with depth subordinated to inlay readability

Meaning logic:

keep Bidar heritage-object dignity, craft precision, and ornament-field coherence stronger than decorative glamour

Keep:

- black field dominance
- silver inlay clarity

- groove construction memory
- engraved precision
- Bidri heritage-object identity

Avoid:

- generic black metalware
- silver paint on dark surface
- chrome luxury styling
- engraving-only decoration
- print-like pattern
- one Bidri patch inside a non-Bidri world

Image-to-Image

Convert this source image into the authentic visual world of **traditional Bidriware from Bidar, Karnataka**.

Preserve the source image's main subject count, object hierarchy, compositional order, and readability, but rebuild the entire image through **Bidri black-field and silver-inlay grammar**. Replace generic materials with a blackened Bidri metal field. Replace ordinary linework or decoration with **engraved groove structure**. Replace painted or surface ornament with **true silver inlay logic**.

If the source image contains vessels, containers, panels, decorative objects, borders, or motif fields, convert them so they behave like real Bidri forms. If the source image contains floral, geometric, or calligraphic-like pattern worlds, rebuild them so they feel **cut into the surface and filled with silver**, not drawn on top. If the source image contains spatial context, keep it subordinate to the Bidri surface-world rather than letting realism dominate.

Retain source-memory:

- cast-alloy object identity
- black oxidized field
- silver inlay contrast
- engraved groove logic
- fitted surface precision
- Bidar heritage-object reading

Do not turn it into generic silver-on-black décor.

Do not turn it into luxury metal product rendering.

Do not keep generic realism and recolor it black.

Do not treat silver as paint or highlight.

Do not let the frame stop behaving like Bidriware.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D image-world** rooted in the authentic logic of **traditional Bidriware from Bidar, Karnataka**. This version must remain source-rooted but may expand beyond literal object-documentation into a richer visual system built from **black oxidized field logic, silver inlay contrast, engraved contour rhythm, and heritage metal-surface intelligence**.

The world must still feel generated from **Bidriware grammar**, not from generic black luxury metal styling. Keep the black field active as a structural ground. Keep silver as the main image-forming agent. Let shape, silhouette, edge, value, and space all begin to reorganize through **engraved-and-inlaid partition logic**.

Use real world-translation logic. The style must transform not only the material but also:

- how forms separate from background
- how light hits the object
- how shadow is grouped
- how contours behave
- how space is layered
- how ornament becomes structure
- how the object-world holds together physically and visually

Allow the image to become more layered, more compositionally rich, and more spatially suggestive, but keep every visible form **Bidri-born**. The image can feel richer than a literal craft-object study, yet it must still behave like a world generated through black–silver inlay logic.

Do not make it generic black metal fantasy.

Do not make it silver pattern on a dark base.

Do not make it realism-first with Bidri added later.

Do not let dimensionality erase groove-and-inlay memory.

Do not let the style survive only as ornament.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **creative 2D + 3D translation** rooted in authentic **Bidriware from Bidar, Karnataka**.

Treat the style as:

a blackened metal inlay world,
a silver contrast-image system,
an engraved partition language,
and a heritage object logic that can expand into a broader image-space without losing inlay truth.

Preserve these style-core rules:

- black field remains structurally primary
- silver inlay remains image-forming
- groove logic remains active
- contour behavior stays inlay-born
- object-world remains Bidriware-based
- full-frame coherence remains inside one Bidri black–silver world

Translate the image like this:

- **[MAIN SUBJECT]** becomes a Bidri-derived form shaped by black mass and silver inlay separation
- **[SECONDARY SUBJECTS]** also obey the same engraved-and-inlaid contrast logic
- **[BORDERS / PANELS / ORNAMENTAL ZONES]** become richer silver-on-black structural fields
- **[ENVIRONMENT / CONTEXT / SUPPORT]** becomes a broader but still Bidri-governed world rather than generic realism

Let these become richer:

- contrast hierarchy
- ornamental field layering
- edge precision
- black–silver value structure
- controlled spatial expansion
- broader full-frame coherence

Keep unchanged:

- Bidriware construction memory
- black oxidized field dominance
- silver insert logic
- heritage-object dignity
- surface-born precision

Avoid:

- generic luxury metal art
- silver overlay on dark surface
- print-like motif behavior
- chrome or enamel misread

- realism-first environment
- any major element leaving the Bidri system

Image-to-Image

Convert this source image into a **creative 2D + 3D Bidriware translation** from Bidar, Karnataka.

Preserve the source image's main subject count, compositional hierarchy, field order, and readability, but reconstruct all visible elements through **black-field and silver-inlay logic**. Let the image become richer and more layered than a literal Bidri object-study, but keep it fully rooted in **engraved groove structure, fitted silver insert behavior, oxidized black ground identity, and Bidar heritage object intelligence**.

If the source image contains vessels, containers, panels, decorative zones, borders, supports, or patterned fields, convert them so they behave like true Bidri forms. If the source image contains ornament, scenes, flora, geometry, or symbolic surface worlds, reorganize them so they feel generated by real inlay partitions instead of decorative overlays.

Retain:

- black oxidized field
- silver inlay logic
- engraved channel memory
- fitted contour precision
- Bidri object-world dignity
- heritage contrast discipline

Allow:

- richer layering
- stronger field-world integration
- controlled 2D + 3D expansion
- broader black–silver world coherence

Do not simply add silver patterns over black metal.

Do not make it generic metal luxury art.

Do not turn it into a realism-first scene.

Do not lose groove-and-inlay construction memory.

Do not let the frame stop behaving like Bidriware.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from the authentic grammar of **traditional Bidriware from Bidar, Karnataka**. The image must feel believable, spatial, and materially convincing, but its realism must remain fully controlled by **black oxidized field identity, silver inlay contrast, engraved groove construction, fitted insert precision, and Bidar heritage craft intelligence**.

Build the world from inside the craft system: the black field must remain structurally dominant, the silver must still organize the image, the forms must separate through engraved-and-inlaid contour logic, and the whole frame must still feel as if it has been generated by **Bidriware intelligence** rather than by ordinary realism.

Material logic is critical. Keep the world anchored in **blackened alloy plus silver inlay**, not generic polished metal. Do not let Bidriware collapse into black chrome, enamelware, lacquer, ceramic, or modern luxury product metal. The black–silver relationship must remain the core value engine.

Shape and space logic are critical. Forms must remain **contrast-separated, partitioned, and inlay-born**. Even as the world gains dimensionality, figures, vessels, surfaces, edges, supports, and decorative fields must still feel organized by groove logic, silver insert rhythm, and black-field mass structure.

Light and shadow logic are critical. The world's lighting must strengthen **Bidri contrast**, not dissolve it into generic metallic realism. Silver should remain sharp and image-forming. The black ground should remain deep and structurally dominant.

Do not make it a realistic object world with Bidri accents.

Do not make it generic luxury metal realism.

Do not let black become only a color and silver only a highlight.

Do not let surface logic disappear into sculptural realism.

Do not allow any major element to belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **full 3D realistic dimensional world** generated from authentic **Bidriware from Bidar, Karnataka**.

Treat the style as:

a blackened metal inlay world,

a silver contrast-image system,

an engraved contour-and-partition language,

and a believable reality whose space, volume, and value are still controlled by Bidriware logic.

Style system that must remain unchanged:

- black oxidized field identity
- silver inlay as the main image-forming force
- engraved groove construction memory
- fitted insert precision
- Bidar heritage-object reading
- full-frame coherence inside one black–silver Bidri world

Translate the scene like this:

- **[MAIN SUBJECT]** becomes a fully dimensional Bidri-derived form structured by black field and silver inlay logic
- **[SECONDARY SUBJECTS]** become dimensional but still obey the same engraved-and-inlaid organization
- **[PANELS / BORDERS / OBJECTS / SUPPORTS]** become tactile Bidriware world elements
- **[ENVIRONMENT]** becomes a believable spatial field organized by black–silver contrast, groove partitions, and inlay-born structure

Increase:

- believable volume
- light on blackened alloy and silver inserts
- spatial completion
- dimensional coherence
- full-frame Bidri world integration

Do not lose:

- black-field dominance
- silver insert image logic
- groove-and-inlay construction memory
- heritage-object dignity
- Bidar craft identity
- whole-frame coherence

Avoid:

- generic metal realism
- silver decoration added later
- chrome-like luxury styling
- enamel / lacquer misread
- sculptural realism replacing inlay logic
- any non-Bidri system taking over the frame

Image-to-Image

Convert this source image into a **full 3D realistic Bidriware world** from Bidar, Karnataka.

Preserve the source image's main subject count, object hierarchy, compositional structure, and readability, but rebuild the entire image through **black-field and silver-inlay grammar**. Convert ordinary materials into a believable **blackened alloy ground plus pure silver insert system**. Convert ordinary linework and ornament into **engraved groove structure**. Convert generic spatial logic into a dimensional world still controlled by Bidriware partition logic, black–silver contrast, and heritage object physics.

If the source image contains vessels, containers, supports, panels, borders, decorative fields, or object surfaces, transform them into Bidri-derived forms that still feel governed by actual inlay construction. If the source image includes surrounding space or environment, rebuild it so the full frame feels born from a coherent Bidriware world rather than from normal realism.

Retain:

- black oxidized matrix
- silver inlay logic
- engraved channel memory
- fitted contour precision
- contrast-based image formation
- Bidar heritage prestige reading

Increase:

- dimensional realism
- material depth
- spatial completion
- light-material interaction
- full-frame Bidri coherence

Do not paste silver pattern over black metal and call it Bidriware.

Do not turn it into generic luxury black metal realism.

Do not let realism erase groove-and-inlay memory.

Do not let the environment overpower the Bidri system.

Do not allow one major element to remain outside the Bidriware world.
