

Garó weaving - Meghalaya

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual grammar of traditional Garó weaving from Meghalaya. Do not treat this as generic Northeast textile, generic tribal stripes, generic ethnic wrap styling, or a normal world with woven motifs added later. Build the entire image as if it is generated by a Garó body-cloth world where back-strap loom logic, dakmanda-like border hierarchy, woven motif discipline, and body-wrap order control every decision.

The image must obey Garó weaving rules:

- the world is built from body-cloth logic, not picture-space logic
- cloth structure remains primary
- strong border and band hierarchy organize the visual system
- motifs behave as woven symbolic units, not decorative stickers
- the cloth reads as wrapped, worn, and body-aware
- the world feels loom-born, intimate, and structurally woven rather than surface-decorated

Translate the full world through this style:

- shape must become border-led, banded, woven, and cloth-native
- form must become loom-disciplined rather than realism-illustrated
- space must become textile-space: wrapped, field-based, and body-oriented rather than scenic perspective space
- light must reveal woven texture, cloth fall, border distinction, and motif clarity
- shadow must support cloth relief and wrap readability, not cinematic atmosphere
- value must remain clean, woven, and hierarchy-supportive
- volume must behave as cloth volume: fold, tension, wrap, and drape rather than sculptural object volume
- movement must feel like woven cloth physics, body tension, border sway, and textile continuity
- environment must also obey textile order: supports, intervals, foliage, architecture, ground, and empty areas must all feel organized by band rhythm, border intelligence, and woven repetition

Use Garó weaving anchors such as:

dakmanda-like cloth organization, strong border bands, symbolic diamond-eye border motifs, cotton / Eri cloth character, and back-strap loom intimacy.

Avoid:

generic tribal fabric, printed-looking motifs, pasted diamonds, equal-density decoration everywhere, generic wraparound cloth, cinematic realism with Garó garments, ordinary environment with only the textile changed, surface-only transformation.

The final result must feel like a true Garo weaving world: body-cloth based, loom-born, border-led, symbolically woven, dakmanda-rooted, and fully translated in shape, form, space, light, hierarchy, and environment.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of traditional Garo weaving from Meghalaya.

Core style system to preserve:

- body-cloth world logic
- back-strap / loinloom intimacy
- border and band hierarchy
- woven symbolic motif units
- dakmanda-like cloth organization
- cotton / Eri textile character under structural control
- full-world consistency under one woven system

Translate the scene like this:

- [MAIN SUBJECT] becomes organized through wrapped cloth logic rather than generic realism
- [SECONDARY SUBJECTS] obey the same woven border-band intelligence
- [OBJECTS / PROPS] become textile-ordered, repeated, banded, or woven in logic rather than randomly placed
- [ENVIRONMENT / BACKGROUND] becomes a body-cloth extension: structured by border rhythm, intervals, banding, repetition, and woven order
- [LIGHT / SHADOW] become cloth-revealing rather than atmosphere-dominant
- [SPACE / DEPTH] become field-based and wrap-oriented rather than scenic and perspective-driven
- [MOVEMENT / ACTION] become cloth tension, drape, body-wrap motion, and woven continuity rather than cinematic action

Keep:

dakmanda-like organization, strong border zones, symbolic woven motifs, loom-born rhythm, textile-led structure, Garo recognizability.

Avoid:

generic Northeast styling, tribal stripe shorthand, print-like surfaces, decorative motifs floating on fabric, ordinary environment with only clothing changed, texture-only translation.

The final result must feel like the whole world was generated by Garo weaving logic.

Image-to-Image

Convert this source image into an authentic Garo weaving world from Meghalaya.

Preserve the source image's subject count, core action, major relationships, and readability, but rebuild the entire image through Garo body-cloth weaving logic. Do not simply add woven stripes, diamond motifs, or handloom texture. Reconstruct the full image so that shape, form, space, light, shadow, value, movement, hierarchy, and environment all obey border-led cloth structure and loom-born organization.

The transformed image must become:

- body-cloth driven rather than costume-driven
- border-structured rather than surface-patterned
- woven and symbolic rather than decorative
- field-based rather than scenic
- wrapped and textile-dimensional rather than object-sculptural
- unified across figures, props, intervals, ground, architecture, foliage, and background systems

Do not let only the garment become Garo while the environment stays generic.

Do not let motifs behave like pasted decoration.

Do not let realism dominate cloth order.

The final result must feel like the source image has been rebuilt by Garo weaving, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D visual world rooted in the traditional Garo weaving grammar of Meghalaya. This must not become generic textile fantasy, decorative handloom illustration, or a normal world with tribal woven cues added later. It should feel like authentic Garo body-cloth logic has expanded into a richer stylized world while remaining fully controlled by border hierarchy, woven symbolic units, and loom-born textile order.

Keep the deep structure unchanged:

- body-cloth logic remains primary
- back-strap loom intimacy remains visible
- border and band hierarchy remain stronger than free composition
- motifs remain woven symbolic units, not floating ornament
- dakmanda-like cloth organization remains active
- environment must still feel textile-ordered rather than scenic

Now let the world become richer:

- border rhythm can shape broader composition
- woven intervals can organize larger visual structure

- cloth-space can become more layered without becoming realism-first
- motif systems can spread more actively across the world while staying loom-disciplined
- body-wrap logic can influence figure grouping, environment, and focal hierarchy
- light can become more expressive while still revealing textile order rather than cinematic mood

Translate everything:

shape, form, space, light, shadow, value, movement, hierarchy, and environment must all be rebuilt through Garo weaving logic.

Avoid:

generic tribal textile fantasy, decorative border worlds, print-like motif spread, ordinary scenic backgrounds, surface-only handloom styling, costume-only translation.

The final result must feel like Garo weaving itself has generated a richer stylized universe.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in traditional Garo weaving from Meghalaya.

Preserve these style-core rules:

- body-cloth world remains primary
- back-strap loom intimacy remains visible
- border and band hierarchy remain active
- woven symbolic motifs remain structural
- dakmanda-like order remains recognizable
- the environment stays textile-generated rather than scenic
- the whole frame obeys one Garo woven system

Translate the scene like this:

- [MAIN SUBJECT] becomes structured by border-led body-cloth logic rather than generic realism
- [SECONDARY SUBJECTS] obey the same textile hierarchy
- [OBJECTS / PROPS] become woven-order carriers: banded, repeated, interval-based, symbolic, or border-aware
- [ENVIRONMENT] becomes a richer but still textile-born world organized by wrap logic, band rhythm, and woven repetition
- [LIGHT / SHADOW] become more expressive while staying cloth-revealing
- [SPACE / DEPTH] become more layered without turning into scenic realism
- [MOVEMENT / ACTION] become drape, wrap tension, cloth continuity, and woven rhythm rather than generic action

Keep:

Garo recognizability, border force, symbolic woven units, loom-born structure, body-cloth logic, textile-space order.

Avoid:

generic handloom fantasy, tribal border decoration, costume-only styling, print-like motifs, normal environment with only cloth changed.

The final result must feel like the world was redesigned by Garo weaving.

Image-to-Image

Convert this source image into a creative 2D + 3D Garo weaving world from Meghalaya.

Preserve the source image's main action, relationships, and readability, but reconstruct the entire image through Garo body-cloth logic. Do not stop at adding handwoven texture, border motifs, or wraparound garments. Rebuild shape, form, space, light, shadow, value, movement, hierarchy, and environment so the whole image behaves like an expanded loom-born textile world.

The transformed image must become:

- cloth-ordered rather than costume-styled
- border-led rather than decorative
- woven and symbolic rather than printed-looking
- body-related rather than generic scenic
- layered through textile-space rather than realism-space
- unified across subject, props, intervals, architecture, foliage, and ground

Do not allow only the garment to become Garo.

Do not let the environment remain ordinary.

Do not let motifs replace structure.

The final result must feel like Garo weaving has expanded into a living stylized world.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the traditional Garo weaving grammar of Meghalaya. This must not become ordinary realism with a woven wrap added later. It must feel like the entire world has become real under Garo body-cloth law: back-strap loom logic, dakmanda-like border hierarchy, woven symbolic motifs, cotton / Eri cloth character, and body-wrap order controlling everything.

Translate the full style into dimensional reality:

- shape must remain cloth-led, border-led, and body-oriented
- form must remain loom-disciplined rather than realism-illustrated

- space must remain textile-space: wrapped, banded, and organized by woven intervals rather than generic perspective
- light must reveal cloth weave, border distinction, motif clarity, and textile depth
- shadow must support drape, relief, and border hierarchy
- value must remain clean and woven-order readable
- volume must behave as cloth volume: fold, tension, drape, wrap, and border-weight
- movement must feel like believable cloth physics under body tension and woven weight
- environment must inherit textile order: supports, foliage, architecture, ground, intervals, and background space must all feel organized by border rhythm and woven structure

Keep realism under cloth control:

believable cotton / Eri material presence, convincing drape, real border weight, and true wrap physics without drifting into generic realism or costume styling.

Avoid:

ordinary realistic figures wearing tribal wraps, generic scenic environments with Garo textiles, printed-looking motifs, surface-only handloom texture, border decoration on normal worlds, realism-first composition.

The final result must feel like Garo weaving itself became dimensional reality.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the traditional Garo weaving system of Meghalaya.

Style system that must remain unchanged:

- body-cloth world logic
- back-strap / loinloom structural order
- dakmanda-like border-and-band hierarchy
- woven symbolic motif units
- cotton / Eri cloth character under structure
- full-world consistency under Garo textile law

Translate the scene like this:

- [MAIN SUBJECT] becomes a dimensional but still cloth-led Garo presence
- [SECONDARY SUBJECTS] obey the same border-and-wrap hierarchy
- [OBJECTS / PROPS] become textile-ordered, repeated, banded, or woven in logic
- [ENVIRONMENT] becomes a believable world organized by body-cloth order, border rhythm, and textile-space structure
- [LIGHT / SHADOW] become realistic but still cloth-revealing and hierarchy-supportive
- [SPACE / DEPTH] become dimensional without turning into generic scenic realism
- [MOVEMENT / PHYSICS] become believable wrap tension, drape, fold, and woven continuity

Increase:

cloth realism, drape conviction, border weight, material depth, environmental completion.

Do not lose:

Garó recognizability, border hierarchy, woven symbolic units, loom-born order, body-cloth primacy.

Avoid:

generic realistic tribal dress, costume-only styling, printed-looking motifs, scenic realism with Garó textile added later, only the garment translated.

The final result must feel like a real Garó weaving world.

Image-to-Image

Convert this source image into a full 3D realistic Garó weaving world from Meghalaya.

Preserve the source image's subject count, action, and readability, but rebuild the full image through Garó body-cloth weaving logic. Do not merely add realistic handwoven cloth or diamond motifs. Reconstruct shape, form, space, light, shadow, value, movement, hierarchy, and environment so the entire scene behaves like a dimensional loom-born textile world.

The transformed image must become:

- body-cloth driven rather than costume-driven
- border-led rather than surface-decorated
- woven and symbolic rather than print-like
- field-ordered rather than scenic
- dimensional through cloth physics rather than realism-first space
- unified across figures, props, architecture, ground, foliage, and intervals

Do not let realism erase the branch.

Do not let only the garment become Garó.

Do not leave the environment generic.

The final result must feel like Garó weaving itself has become real.
