

Gendered / ceremonial body-cloth branch- Nagaland

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the authentic gendered / ceremonial body-cloth world of Nagaland. Do not treat this as generic patterned garments, a unisex shawl display, or a normal world with culturally coded cloth added later. Build the entire image as if it is generated by a socially differentiated body-cloth system where placement, wearer-role, ceremonial context, public readability, and body-specific cloth law control every decision.

The image must obey this branch law:

- the world is generated from wearer-role and body-placement logic, not from generic garment styling
- cloth must sit differently according to social role, ceremonial function, and body presentation
- visual distinction must come from socially meaningful placement, not just pattern difference
- public readability of who wears what remains primary
- body-cloth relation must feel structured and socially specific
- the world must feel organized by ceremonial and wearer-specific order

Translate the full world through this body-cloth system:

- shape must become role-specific, body-placed, and socially differentiated
- form must become body-law-governed rather than fashion-governed
- space must become ceremonial body space rather than ordinary scenic space
- light must preserve wearer-role readability and cloth placement clarity
- shadow must support drape, placement, and public legibility without obscuring them
- value must remain organized by body-role structure
- movement must feel like wearer-specific cloth use, ceremonial motion, and socially readable posture
- environment must also obey body-role law: characters, props, architecture, social grouping, landscape, and background must all feel shaped by ceremonial placement, wearer distinction, and public presentation order

Keep the branch source-rooted:

socially differentiated body-cloth logic, ceremonial placement, wearer-specific readability, handloom discipline, and whole-frame social order.

Avoid:

generic patterned fashion, unisex shawl display, costume variety without structure, ordinary realism with culturally coded cloth added, and surface-only garment differentiation.

The final result must feel like a true Nagaland gendered / ceremonial body-cloth world: socially differentiated, body-placed, ceremonially readable, woven, and fully translated across the whole frame.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of a gendered / ceremonial Naga body-cloth world.

Core style system to preserve:

- wearer-role differentiation
- body-placement law
- ceremonial public readability
- socially structured cloth presentation
- handloom-built body-cloth discipline
- non-generic role clarity
- whole-frame coherence under one body-role law

Translate the scene like this:

- [MAIN SUBJECT] becomes governed by socially meaningful cloth placement rather than generic realism
- [SECONDARY SUBJECTS] obey the same wearer-specific presentation law
- [OBJECTS / PROPS] become role-reinforcing and ceremonial rather than random
- [ANIMALS / TREES / LANDSCAPE / ARCHITECTURE] become shaped by body-role order, ceremonial grouping, and socially structured visibility
- [ENVIRONMENT / BACKGROUND] becomes a world of differentiated presentation and ceremonial readability
- [LIGHT / SHADOW] preserve body-cloth placement clarity rather than generic mood
- [SPACE / DEPTH] become ceremonial social space rather than ordinary scenic depth
- [MOVEMENT / ACTION] become wearer-specific posture, cloth motion, and role-readable interaction

Keep:

body-role distinction, ceremonial placement, social readability, woven body-cloth law, role clarity.

Avoid:

generic garment variety, patterned fashion styling, unisex flattening, costume dressing without structure, and ordinary realism with symbolic garments.

The final result must feel like the whole world was generated by Nagaland gendered / ceremonial body-cloth law.

Image-to-Image

Convert this source image into an authentic gendered / ceremonial Naga body-cloth world.

Preserve the source image's subject count, core action, main relationships, and readable scene meaning, but rebuild the entire image through socially differentiated body-cloth logic. Do not simply add different patterned garments. Reconstruct all visible forms so that shape, form, light, shadow, value, movement, and environment obey wearer-role placement law.

The transformed image must become:

- role-structured rather than garment-decorated
- socially differentiated rather than merely varied
- body-placed rather than fashion-styled
- ceremonially readable rather than visually mixed
- unified across figures, props, social grouping, architecture, terrain, and background

Do not let only the garments become branch-correct while the rest of the frame stays generic.

Do not let pattern variety replace role-law.

Do not let realism erase ceremonial placement.

The final result must feel like the source image has been rebuilt by a Nagaland body-cloth civilization, not decorated with culturally varied garments.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image world rooted in the gendered / ceremonial body-cloth grammar of Nagaland. This must not become generic costume diversity, a stylized world with different patterned outfits, or fashion-driven cultural variety. It should feel like authentic wearer-law has expanded into a broader world where characters, props, architecture, animals, mountains, and environment are all rebuilt through body-role differentiation and ceremonial placement logic.

Keep the deep structure unchanged:

- socially differentiated wearer-law remains primary
- body-placement remains structural
- ceremonial readability remains central
- cloth variety remains role-bound, not decorative
- handloom body-cloth discipline remains source-rooted
- the whole frame remains generated by gendered / ceremonial law

Now let the world become richer:

- characters can be built from differentiated role-placements and body-specific field organization
- animals and objects can reinforce ceremonial grouping and wearer distinction
- architecture and space can become organized by public role, threshold, and ceremonial visibility
- mountains, trees, ground, and sky can become ordered through differentiated presentation logic
- shadows can deepen while preserving body-role readability
- space can become a world of socially structured visibility rather than ordinary landscape

Translate everything:

color, shape, line, form, light, shadow, volume, depth, character, animal, object, architecture, environment, and total scene behavior must all be rebuilt through wearer-law.

Avoid:

fashion fantasy, costume-rich stylization, generic patterned diversity, unisex flattening, and ordinary stylized worlds with culturally varied garments.

The final result must feel like the gendered / ceremonial body-cloth branch itself has generated an imaginative unified 2D + 3D world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the gendered / ceremonial body-cloth world of Nagaland.

Preserve these style-core rules:

- wearer-role differentiation remains primary
- body-placement remains structural
- ceremonial readability remains central
- handloom body-cloth discipline remains source-rooted
- social role remains more important than mere variety
- the whole frame remains generated by body-role law

Translate the scene like this:

- [MAIN SUBJECT] becomes a figure built from role-specific cloth placement and ceremonial body structure rather than generic realism
- [SECONDARY SUBJECTS] obey the same socially differentiated wearer-law
- [ANIMALS / OBJECTS / PROPS] become role-reinforcing and ceremony-structuring elements
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become organized by body-role visibility, ceremonial grouping, and socially structured order
- [ENVIRONMENT] becomes a world of differentiated presentation and public role readability
- [LIGHT / SHADOW] preserve wearer-law rather than generic mood
- [SPACE / DEPTH] become ceremonial social space rather than ordinary scenic depth

- [MOVEMENT / ACTION] become wearer-specific posture, cloth motion, and role-structured interaction

Keep:

body-role distinction, ceremonial placement, public readability, social structure, handloom-built body-cloth law.

Avoid:

fashion styling, costume variety without law, generic garment diversity, unisex flattening, and ordinary stylized worlds with culturally varied outfits.

The final result must feel like the world was redesigned by Nagaland gendered / ceremonial body-cloth intelligence.

Image-to-Image

Convert this source image into a creative 2D + 3D gendered / ceremonial Naga body-cloth world.

Preserve the source image's core action, readable relationships, and main scene meaning, but rebuild every visible element through socially differentiated body-cloth logic. Do not stop at adding role-varied garments. Reconstruct shape, form, light, shadow, volume, depth, character design, environment, and spatial behavior so the whole image behaves like a world generated by wearer-law.

The transformed image must become:

- role-structured rather than costume-styled
- socially differentiated rather than visually assorted
- body-placed rather than fashion-driven
- ceremonially readable rather than generically cultural
- unified across figures, props, social grouping, architecture, terrain, and background

Do not let only selected garments become branch-correct.

Do not let the environment remain generic.

Do not let visual variety replace wearer-law.

The final result must feel like Nagaland gendered / ceremonial body-cloth culture has expanded into a full imaginative world-state.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the gendered / ceremonial body-cloth grammar of Nagaland. This must not become ordinary realism with socially varied garments added later. It must feel like the entire world has become real under wearer-law: role-specific body placement, ceremonial readability, socially structured visibility, and handloom body-cloth differentiation controlling every visible element.

Translate the full style into dimensional reality:

- shape must remain role-specific and body-placed
- form must remain wearer-law-governed rather than fashion-realism-governed
- color must remain under socially differentiated presentation law
- light must preserve ceremonial readability and cloth placement clarity
- shadow must support body-role distinction without obscuring it
- volume must behave like real body-borne ceremonial cloth and role-structured world form
- depth must be built through socially organized visibility rather than generic scenic realism
- characters, animals, props, architecture, terrain, and all environmental structures must feel generated through gendered / ceremonial body-cloth law, not merely styled by it

Keep realism under branch control:

believable cloth weight, real ceremonial posture, visible wearer distinction, socially structured grouping, and total body-law world coherence.

Avoid:

ordinary realism with culturally varied garments, costume realism, fashion ethnic styling, unisex flattening, and prop-only ceremonial-cloth accents.

The final result must feel like the Nagaland gendered / ceremonial body-cloth branch itself has become a believable living world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the gendered / ceremonial body-cloth grammar of Nagaland.

Style system that must remain unchanged:

- wearer-role differentiation
- role-specific body placement
- ceremonial public readability
- socially structured handloom body-cloth law
- non-fashion wearer distinction
- whole-frame body-law coherence

Translate the scene like this:

- [MAIN SUBJECT] becomes a fully dimensional figure built from role-specific cloth placement and socially structured body-law
- [SECONDARY SUBJECTS] obey the same differentiated wearer system

- [ANIMALS / OBJECTS / PROPS] become believable forms reinforcing ceremonial grouping and social readability
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become real spatial forms organized by wearer distinction and ceremonial visibility
- [LIGHT / SHADOW] become realistic but still role-structure-revealing
- [SPACE / DEPTH] become believable ceremonial social space rather than generic realism-space
- [MOVEMENT / PHYSICS] become real body-role posture, cloth motion, and socially structured interaction

Increase:

cloth realism, wearer distinction, ceremonial posture, spatial completion, social grouping, body-law coherence.

Do not lose:

role-specific structure, body-placement law, ceremonial readability, handloom differentiation, branch purity.

Avoid:

normal realism with varied garments, fashionized ethnic realism, costume-rich worlds, unisex flattening, and ordinary scenes with symbolic clothes added.

The final result must feel like a real Nagaland gendered / ceremonial body-cloth world.

Image-to-Image

Convert this source image into a full 3D realistic gendered / ceremonial Naga body-cloth world.

Preserve the source image's subject count, readable action, and main relationships, but rebuild all visible forms through socially differentiated body-cloth logic. Replace ordinary realism with wearer-law, role-specific placement, ceremonial readability, and socially structured world behavior.

The transformed image must become:

- role-generated rather than garment-decorated
- socially differentiated rather than visually assorted
- body-law-governed rather than fashion-led
- real in volume but still controlled by ceremonial wearer structure
- unified across figures, props, social grouping, architecture, terrain, and environment

Do not let only selected garments become branch-correct.

Do not let realism take over.

Do not leave the rest of the world generic.

The final result must feel like the Nagaland gendered / ceremonial body-cloth world has become believable reality.
