

Kasuti - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of **Kasuti embroidery from Karnataka**, rooted in the **Dharwad / north Karnataka textile tradition**. Build the image as if it comes from a real counted-thread, knotless hand-embroidery system worked on cloth, especially the world of sarees, pallus, and related fabric surfaces. The image must read first as **Kasuti embroidery**, not as generic Indian embroidery, not as printed textile design, not as zari-heavy festive embellishment, and not as freehand decorative handwork.

Use true construction logic. Every visible motif must feel **stitched into cloth through counted-thread order**, not drawn, painted, printed, appliquéd, or digitally overlaid. Keep the embroidery precise, measured, and structurally disciplined. The work must feel governed by **Kasuti stitch intelligence**: a knotless, geometry-led thread system where motifs emerge through controlled stitch movement and textile counting rather than through pictorial illustration.

Use true form logic. The motifs must remain **geometric, compressed, and stitch-built**. If you include temple towers, chariots, palanquins, elephants, cows, parrots, peacocks, lotus, jasmine, marigold, or religious signs, they must not be naturalistic drawings. They must look like authentic Kasuti motifs formed through thread logic on cloth. Keep motif clarity high, but keep realism low.

Use true textile logic. The cloth support must matter. The design must feel placed on a real textile surface, with border logic, pallu logic, field logic, spacing discipline, and garment-aware distribution. The embroidery must not float like a poster graphic. The full frame must feel like one textile-born embroidery world.

Use true material logic. Keep the surface as **thread on cotton or silk cloth**, not metallic ornament, not beadwork, not mirror work, and not embossed luxury embellishment. The embroidery should feel delicate, exact, hand-built, and cloth-bound.

Do not make it generic embroidery.

Do not make it zari-first.

Do not make it cross-stitch craft-kit art.

Do not make it printed geometric fabric pretending to be embroidery.

Do not let any major element belong to another embroidery language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / TEXTILE SURFACE]** in the authentic visual logic of **Kasuti embroidery from Karnataka**, especially the **Dharwad / north Karnataka counted-thread tradition**.

Treat the style as:

a knotless counted-thread embroidery system,
a geometric motif-construction language,
a cloth-bound textile surface tradition,
and a symbolic motif-world tied to temple architecture, animals, flowers, and devotional forms.

Core style system to preserve:

- counted-thread construction
- knotless stitch discipline
- stitch-built geometry
- cloth support as active structure
- textile-zone placement logic
- motif compression rather than pictorial drawing
- delicate hand-embroidered precision
- full-frame consistency so all visible elements belong to the same Kasuti embroidery world

Translate the image like this:

- **[MAIN SUBJECT / MAIN MOTIF]** becomes a Kasuti-style stitched motif built through counted-thread geometry
- **[SECONDARY MOTIFS / SUPPORTING FORMS]** also obey the same knotless embroidery logic
- **[BORDER / PALLU / FIELD / SURFACE ZONES]** become organized through authentic Kasuti placement rhythm
- **[ADDITIONAL ELEMENTS]** must support the same embroidery system and not pull the frame into print, painting, or generic ornament

Material logic:

keep thread-on-cloth truth, delicate hand-stitched tactility, surface precision, and textile-borne structure

Form logic:

keep motifs geometric, symmetrical or rhythmically structured, compressed through stitch logic, and clearly embroidery-born

Meaning logic:

keep temple, animal, floral, and symbolic vocabulary culturally grounded and structurally embedded rather than casually decorative

Keep:

- counted-thread identity

- knotless embroidery feel
- textile-zone discipline
- stitch-built motif clarity
- authentic Kasuti surface intelligence

Avoid:

- generic ethnic embroidery
- zari-rich surface glamour
- mirror work
- appliqué logic
- printed textile look
- painted illustration on fabric
- one Kasuti patch inside a non-Kasuti visual world

Image-to-Image

Convert this source image into the authentic visual world of **Kasuti embroidery from Karnataka**.

Preserve the source image's main subject count, major compositional relationships, surface hierarchy, and readable motif order, but rebuild the entire image through **counted-thread Kasuti logic**. Replace generic surface design with knotless stitched geometry. Replace illustrated or printed motifs with real embroidery-built forms. Replace ordinary decorative cloth with a true Kasuti textile field.

If the source image contains motifs, compress them into **Kasuti stitch-geometry** instead of drawing them naturalistically. If the source image contains borders, panels, or textile zones, rebuild them through pallu / border / field logic that feels garment-born and embroidery-native. If the source image contains animals, flowers, temple forms, or devotional symbols, convert them so they read as authentic Kasuti motifs, not generic Indian embroidery icons.

Retain source-memory:

- counted-thread order
- knotless embroidery discipline
- thread-on-cloth truth
- geometric motif compression
- textile-zone placement
- delicate hand-embroidered precision

Do not turn the image into print.

Do not turn it into generic festive embroidery.

Do not turn it into cross-stitch craft art.

Do not paint on top of cloth and call it embroidery.
Do not let the frame stop feeling like a real Kasuti textile system.

V2 — Artisan Translation

Universal Hard Prompt

This version stays source-rooted but opens into a richer translation zone: not flat print, not full realism, but a creative image-world where Kasuti stitch intelligence begins to organize a broader frame. The source grammar must still dominate.

1) Universal Hard Prompt

Create a **creative 2D + 3D image-world** rooted in the authentic logic of **Kasuti embroidery from Karnataka**. This version must stay source-faithful in grammar but may expand beyond literal textile-documentation into a richer image system built from **counted-thread order, knotless stitch construction, geometric motif intelligence, cloth-zone distribution, and symbolic embroidery vocabulary**.

The world must still feel generated from **Kasuti embroidery logic**, not from generic decorative design. The surface may become richer, layered, and more spatially suggestive, but it must not become ordinary realism or generic pattern illustration. The thread-built grammar should remain primary.

Use true translation logic. Let motifs, borders, fields, and spacing evolve into a more expressive 2D + 3D arrangement, but keep every form visibly born from **stitch order and cloth structure**. Temple towers, chariots, palanquins, elephants, cows, parrots, peacocks, lotus, jasmine, marigold, and devotional signs must still feel like Kasuti motifs, even when the visual world becomes more image-rich.

Use true material-memory logic. The work should still remember **thread on cloth**, not become paint, print, appliqué, or sculptural ornament. The embroidery may gain more dimensional suggestion, but it must still look like a world generated by stitching, not a world later decorated with embroidery motifs.

Use true spatial logic. The frame may become more layered and compositionally expanded, but it must remain controlled by **textile-zone order, motif rhythm, and embroidery-based field logic**. The whole image must belong to one Kasuti-derived world.

Do not make it generic “folk textile art.”
Do not make it decorative pattern illustration.
Do not make it full realism.
Do not let dimensionality erase counted-thread structure.
Do not let the style survive only as motif overlay.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / TEXTILE WORLD]** as a **creative 2D + 3D translation** rooted in authentic **Kasuti embroidery from Karnataka**.

Treat the style as:

a counted-thread knotless embroidery system,
a geometric motif-construction language,
a cloth-surface order system,
and a symbolic textile world that can expand into a richer image-space without losing stitch truth.

Preserve these style-core rules:

- counted-thread logic remains primary
- knotless embroidery discipline remains conceptually active
- motifs remain stitch-built and geometric
- cloth support still governs arrangement
- temple / animal / floral / devotional vocabulary stays source-rooted
- full-frame coherence remains inside one Kasuti world

Translate the image like this:

- **[MAIN SUBJECT]** becomes a Kasuti-derived embroidery form with stitch-built geometry
- **[SECONDARY SUBJECTS]** also obey the same counted-thread logic
- **[BORDERS / PANELS / FIELDS / SUPPORTING STRUCTURES]** become richer textile-aware spatial elements organized by Kasuti rhythm
- **[ENVIRONMENT / BACKGROUND / SURFACE CONTEXT]** becomes a broader 2D + 3D embroidery-derived field rather than generic space

Let these become richer:

- motif layering
- field-to-border relation
- textile rhythm across the frame
- controlled dimensional suggestion
- more integrated symbolic worldbuilding through embroidery logic

Keep unchanged:

- Kasuti stitch identity
- cloth-born structure
- geometric motif discipline
- thread-built appearance
- source-rooted symbolic vocabulary

Avoid:

- generic embroidery-inspired illustration
- printed pattern logic
- appliqué or beadwork drift
- realism-first scene design
- decorative ethnic styling without stitch structure
- any major element leaving the Kasuti system

Image-to-Image

Convert this source image into a **creative 2D + 3D Kasuti translation** from Karnataka.

Preserve the source image's main subject count, motif hierarchy, compositional order, and overall readability, but reconstruct all visible forms through **Kasuti counted-thread embroidery grammar**. Allow the image to become richer and more layered than a flat textile study, but keep it fully rooted in knotless stitch logic, geometric motif-building, cloth-zone structure, and thread-based surface intelligence.

If the source image contains animals, temple forms, floral motifs, borders, architecture, or decorative fields, convert them so they feel born from real Kasuti embroidery construction. If the source image contains spatial organization, let that space be reorganized through embroidery rhythm, textile zoning, and stitch-led structure rather than through normal depth realism.

Retain:

- thread-on-cloth memory
- counted-thread construction
- knotless discipline
- geometric motif compression
- textile-borne order
- authentic Kasuti vocabulary

Allow:

- richer layering
- more integrated field design
- controlled 2D + 3D visual expansion
- broader embroidery-world coherence

Do not simply add Kasuti motifs onto a normal image.

Do not make it print-first.

Do not make it decorative textile fantasy.

Do not let the frame stop behaving like embroidery.

Do not let realism replace stitch intelligence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from the authentic grammar of **Kasuti embroidery from Karnataka**. The image must feel believable, spatial, and materially convincing, but its realism must remain fully controlled by **Kasuti stitch-and-cloth logic**, not by ordinary realism with embroidered decoration added later.

Build the world from inside the Kasuti system: counted-thread order, knotless stitch discipline, geometric motif construction, thread-on-cloth memory, pallu / border / field organization, and temple-animal-floral-devotional symbolic vocabulary. The result should feel like Kasuti embroidery has expanded into a believable dimensional reality while still remaining unmistakably embroidery-born.

Material logic is critical. The world must still remember **thread, cloth, stitch, and textile support**. Do not replace embroidery with print. Do not replace cloth with generic surfaces. Do not turn stitch-built motifs into painted graphics. The realism should enrich material presence, depth, and environment, but it must not erase the source truth that Kasuti is embroidery first.

Form logic is critical. Motifs must remain **geometric and stitch-born**, not illustrative or naturalistic. Even when the world gains dimensionality, temple forms, animals, flowers, and sacred motifs must still feel like they are governed by Kasuti construction logic rather than by pictorial realism.

World logic is critical. If the frame includes textile surfaces, bodies, objects, structures, architecture, or environment, all of them must feel organized by one Kasuti-derived system. The whole frame must read as a believable dimensional world whose structure, rhythm, and motif behavior are controlled by counted-thread embroidery intelligence.

Do not make it a realistic world with Kasuti decoration.

Do not make it fashion-product realism with stitched accents.

Do not make it printed-textile realism.

Do not let motif realism replace stitch geometry.

Do not let any major element belong to another visual language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **full 3D realistic dimensional world** generated from authentic **Kasuti embroidery from Karnataka**.

Treat the style as:

a counted-thread knotless embroidery system,
a cloth-and-thread material language,
a geometric symbolic motif-world,
and a believable reality whose volume and space are still controlled by embroidery structure.

Style system that must remain unchanged:

- counted-thread logic
- knotless embroidery discipline
- geometric motif construction
- cloth-support memory
- textile-zone placement intelligence
- temple / animal / floral / devotional Kasuti vocabulary
- full-frame coherence inside one Kasuti-derived world

Translate the scene like this:

- **[MAIN SUBJECT]** becomes a fully dimensional Kasuti-derived form whose structure remains stitch-born
- **[SECONDARY SUBJECTS]** become dimensional but still governed by counted-thread embroidery logic
- **[OBJECTS / PROPS / STRUCTURES]** become textile-aware Kasuti-world elements
- **[ENVIRONMENT]** becomes a believable spatial field organized by embroidery rhythm, motif zoning, and cloth-derived structure

Increase:

- believable volume
- material depth
- light-material interaction
- environmental completion
- spatial coherence
- full-world integration

Do not lose:

- thread-and-cloth memory
- counted-thread structure
- knotless precision
- geometric motif discipline
- Kasuti symbolic vocabulary
- whole-frame embroidery control

Avoid:

- ordinary realism with decoration added
- printed textile realism

- fashion shoot logic
- graphic pattern pasted on 3D space
- illustrative motif realism
- any non-Kasuti system taking over the frame

Image-to-Image

Convert this source image into a **full 3D realistic Kasuti world** from Karnataka.

Preserve the source image's main subject count, compositional hierarchy, major spatial relationships, and readable order, but rebuild the entire image through **Kasuti embroidery grammar**. Convert ordinary surfaces into cloth-and-thread memory. Convert decorative motifs into counted-thread geometric forms. Convert generic space into a believable dimensional world whose structure is controlled by Kasuti logic.

If the source image contains motifs, animals, floral units, temple references, panels, borders, or zones, transform them into **Kasuti-derived dimensional forms** that still feel stitch-built. If the source image contains architecture, objects, bodies, or environment, translate them so the entire frame feels generated by embroidery intelligence rather than merely decorated with embroidery.

Retain:

- counted-thread memory
- knotless stitch discipline
- thread-on-cloth material truth
- geometric motif construction
- textile-zone order
- authentic Kasuti symbolic vocabulary

Increase:

- dimensional realism
- material depth
- environment completion
- full-frame coherence
- believable spatial structure

Do not paste Kasuti motifs over a normal realistic scene.

Do not turn embroidery into print.

Do not let realism erase cloth support.

Do not naturalize the motifs beyond stitch logic.

Do not allow one major element to remain outside the Kasuti system.
