

Leather Toys of Indore - Madhya Prad...

V1 — Authentic Style

Universal Hard Prompt

Create a full image-world in the authentic source-faithful grammar of **Leather Toys of Indore**. Do not make realistic animals or characters with leather texture. Build the whole frame as if it were generated by **wire armature, molded core, leather skin tension, glued construction, and painted toy finish**. Every figure must feel internally supported, externally skinned, slightly simplified in toy proportion, and finished for crafted clarity. Curves must feel stretched over structure, not organically grown. The world must read as a leather-toy world, not realism with leather surfaces added later.

Reusable Variable Template

Create **[SCENE / SUBJECT / FIGURE / WORLD]** in the authentic source-faithful grammar of **Leather Toys of Indore**.

Translate everything through: armature-built pose, molded volume, leather skin tension, fitted or seamed surface behavior, and painted toy finish.

[MAIN FIGURES] become armature-built toy presences, never realistic flesh beings.

[SURFACES] become skinned-over-form surfaces, not coated realism.

[DETAILS] become painted toy-finish details, not realism painting.

[SPACE / ENVIRONMENT] becomes constructed toy-space, not naturalistic world-space.

Avoid leather texture maps, realistic anatomy, upholstery logic, or generic handmade toy charm.

Image-to-Image

Convert this source image into the authentic source-faithful world of **Leather Toys of Indore**. Preserve the scene's main relationships and readability, but rebuild all forms through armature-supported pose, molded toy volume, stretched leather surface tension, glued fitted construction, and painted toy-finish clarity. The environment must also become toy-space, not remain realistic. Do not merely coat the forms in leather.

V2 — Artisan Translation

Universal Hard Prompt

Create a full image-world in the **authentic handcrafted dimensional version** of **Leather Toys of Indore**. Keep the leather-toy grammar intact, but deepen the dimensional presence: richer molded volume, clearer skin-over-structure curvature, stronger seam/fitted transitions, more tactile painted finish, and more present toy-space. It must still read as armature-built, leather-skinned, and toy-authored, not realism-first, not upholstery-like, and not generic decorative leather craft.

Reusable Variable Template

Create **[SCENE / SUBJECT / WORLD]** in the authentic handcrafted dimensional version of **Leather Toys of Indore**.

Translate everything through: armature logic, molded body dimensionality, leather tension, fitted surface transitions, painted toy finish, and toy-space organization.

[MAIN FIGURES] gain richer skinned volume.

[POSES] remain armature-stabilized, not realistic.

[SURFACES] gain more tactile leather-body presence.

[ENVIRONMENT] becomes more dimensional while still toy-constructed.

Avoid realism-first creature design, upholstery drift, or leather texture pasted over ordinary forms.

Image-to-Image

Convert this source image into the authentic handcrafted dimensional world of **Leather Toys of Indore**. Preserve the scene's core readability, but rebuild all forms as richer armature-built, leather-skinned toy bodies with clearer tension, seams, molded depth, and painted toy finishing. The whole frame must feel like a dimensional toy-world, not a realistic world with leather on top.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic world** generated by the grammar of **Leather Toys of Indore**. The entire frame must obey leather-toy law: internal support, molded core, stretched leather skin, painted toy finish, simplified but expressive object-proportion, and constructed toy-space. Do not make a realistic world with leather-coated creatures. Make the whole world feel authored by the branch's skinned armature logic, from figures to props to surfaces to environment. Keep the world cinematic and believable, but clearly toy-constructed and leather-authored.

Reusable Variable Template

Create **[SCENE / WORLD / EVENT]** as a fully volumetric cinematic version of **Leather Toys of Indore**.

Translate everything through: armature-built pose, molded volume, leather surface tension, fitted-seam logic, painted toy clarity, and toy-world construction.

[FIGURES] become cinematic leather-toy presences.

[PROPS / OBJECTS] become armature-built skinned objects.

[ENVIRONMENT / STRUCTURES] become constructed toy-space, not natural realism.

[LIGHT / SHADOW] must reveal curvature, tension, and toy-object mass, not realism flesh or fur.

Avoid realism with leather skin, costume logic, or ordinary world structure with toy characters inserted.

Image-to-Image

Convert this source image into a fully volumetric cinematic world generated by **Leather Toys of Indore**. Preserve major action and readability, but rebuild all visible forms through armature-supported pose, molded toy volume, skinned leather tension, fitted seams, painted toy finish, and constructed environment logic. The result should feel like a believable cinematic leather-toy world, not a realistic image with leather effects.
