

# Mysuru Rosewood Inlay - Karnataka

## V1 — Authentic Style

### Universal Hard Prompt

Create an image in the authentic visual logic of **traditional Mysuru Rosewood Inlay from Karnataka**. Build the image as if it comes from a real heritage inlay object-world from **Mysuru**, where the **dark flat surface of rosewood is carefully scooped out and fitted with contrasting insert materials to form pictures**. The image must read first as **Mysuru Rosewood Inlay**, not as generic dark wood decoration, not as marquetry in a broad international sense, not as painted wood, not as carved wood alone, and not as furniture ornament with incidental motifs.

Use real construction logic. The world must be built through **rosewood field + recessed design spaces + fitted contrasting inserts + flush finished surface**. Every visible figure, animal, scene, border, and decorative element must feel like it has been **cut into the rosewood field and filled with carefully shaped inlay pieces**. Do not make the motifs look painted on top, printed, engraved only, pasted like collage, or carved from a single continuous wood mass.

Use real shape logic. The style must build the world through **contrast masses, fitted contours, silhouette separation, insert-bound geometry, and panel logic**. Figures, animals, birds, village scenes, mythological scenes, and natural scenes must all feel like they belong to a picture-making system formed by inserted shape-fields inside a dark rosewood ground. Do not use generic realism-first modeling. Use inlay-born contour clarity.

Use real surface logic. The image must feel like a **resolved flush surface**, not layered applique and not raised relief. Surface transitions should feel precise, patient, and fitted. The polishing should support the inlay image rather than bury it under glossy luxury finish.

Use real space logic. Space must be organized like a **picture-surface world**, not like open cinematic realism. Depth may exist, but it must be governed by panel hierarchy, contrast-field layering, and fitted insert readability. The frame should feel as if the style itself generated the whole image-world through inlay intelligence.

Use real heritage logic. The object or panel must feel rooted in **Mysuru heritage prestige craft**, not anonymous premium woodworking. Keep the image dignified, precise, culturally grounded, and manually resolved.

Do not make it generic carved wood.

Do not make it broad marquetry.

Do not make it painted panel art.

Do not make it realistic furniture with decorative inlay added later.

Do not let any major element belong to another visual language.

## Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE]** in the authentic visual logic of **traditional Mysuru Rosewood Inlay from Karnataka**, especially the **Mysuru heritage inlay tradition**.

Treat the style as:

a dark rosewood picture-surface system,  
a scooped-and-filled inlay construction language,  
a fitted contrast-image world,  
and a heritage prestige craft where imagery is formed by inserts within rosewood rather than by painting or carving alone.

Core style system to preserve:

- dark rosewood ground identity
- recessed design-space logic
- fitted contrasting insert construction
- flush resolved polished surface
- contrast-based image readability
- picture-panel / figurative surface logic
- Mysuru heritage prestige-object feeling
- full-frame consistency so all visible elements belong to one rosewood-inlay world

Translate the image like this:

- **[MAIN SUBJECT / MAIN FORM]** becomes a Mysuru Rosewood Inlay image-form built from fitted contrasting inserts inside a dark rosewood field
- **[SECONDARY FORMS / SUPPORTING SUBJECTS]** also obey the same inlay logic
- **[BORDERS / PANELS / SURFACE ZONES]** become cut-and-filled ornamental picture-fields
- **[OBJECT BODY / SUPPORT / CONTEXT]** must support the inlay reading rather than overpower it with generic woodworking or realism

Material logic:

keep dark rosewood field dominance, contrasting insert presence, surface fit precision, and polished heritage object finish

Shape logic:

keep forms separated by inlay contour logic, contrast masses, fitted silhouettes, and insert-driven clarity rather than painterly modeling

Space logic:

keep the world picture-surface-led, with depth controlled by field layering and panel organization rather than cinematic realism

Meaning logic:

keep mythological, village, natural, animal, and bird subject worlds structurally embedded into the inlay system rather than pasted on as themes

Keep:

- rosewood field identity
- recessed-and-filled construction memory
- flush surface reading
- contrast-based picture clarity
- Mysuru heritage-object dignity

Avoid:

- generic dark wood ornament
- print look
- paint look
- carving-only look
- furniture-first luxury styling
- collage-like material assembly
- one inlaid patch inside a non-inlay world

## Image-to-Image

Convert this source image into the authentic visual world of **traditional Mysuru Rosewood Inlay from Karnataka**.

Preserve the source image's main subject count, object hierarchy, scene readability, and compositional structure, but rebuild the entire image through **dark rosewood inlay logic**. Replace generic surfaces with a **dark rosewood ground**. Replace ordinary image-making with **recessed design spaces and fitted contrasting inserts**. Replace drawn, painted, or carved imagery with a flush contrast-based picture-surface.

If the source image contains mythological scenes, village life, natural scenes, birds, animals, or decorative panel imagery, convert them so they read like true Mysuru inlay forms, not illustrations placed on wood. If the source image contains object supports such as boxes, panels, furniture surfaces, or wall-hanging structures, make them behave as hosts for the inlaid image field rather than as normal objects with decoration added afterward.

Retain source-memory:

- dark rosewood matrix
- scooped-and-filled construction
- contrasting insert material logic
- fitted contour precision
- flush surface finish

- Mysuru heritage prestige-object reading

Do not turn it into marquetry-like generic wood craft.

Do not turn it into painted wood panel art.

Do not turn it into carving-first ornament.

Do not keep generic realism and recolor it as wood.

Do not let the frame stop behaving like true rosewood inlay.

## V2 — Artisan Translation

### Universal Hard Prompt

Create a **creative 2D + 3D image-world** rooted in the authentic logic of **traditional Mysuru Rosewood Inlay from Karnataka**. This version must remain source-rooted but may expand beyond literal object-documentation into a richer visual system built from **dark rosewood field logic, fitted insert contrast, cut-surface image construction, flush decorative plane behavior, and heritage prestige-object intelligence**.

The world must still feel generated from **inlay grammar**, not from generic decorative wood styling. Keep the rosewood field active. Keep fitted insert logic primary. Let figures, animals, birds, mythological scenes, village life, natural scenes, borders, and ornamental fields all feel like they emerge through **contrast-shaped insert masses** rather than through paint, carving, or realism-first rendering.

Use true translation logic. Allow the image to become more layered, more compositionally rich, and more spatially suggestive, but keep every form visibly born from **cut-field and fitted-surface intelligence**. The image can feel more expansive than a literal panel, but it must still feel like the world is being built by inlay logic.

Use true shape logic. Let contour, edge behavior, silhouette, spacing, and field hierarchy all be governed by **insert geometry and rosewood-ground separation**. Even when the frame broadens, the style must still read through fitted shape-fields and contrast partitions.

Use true surface logic. The world should still resolve toward **flush inlay coherence**, not raised collage, not broad relief carving, and not painted decoration.

Use true heritage logic. The image must preserve Mysuru prestige-craft dignity and not drift into random “royal décor” styling.

Do not make it generic marquetry fantasy.

Do not make it dark wood with pale decoration.

Do not make it object realism with inlay motifs pasted later.

Do not let dimensionality erase inlay construction logic.

Do not let the style survive only as material swap.

## Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **creative 2D + 3D translation** rooted in authentic **Mysuru Rosewood Inlay from Karnataka**.

Treat the style as:

a dark rosewood picture-field system,  
a cut-and-fill contrast world,  
a fitted insert contour language,  
and a Mysuru heritage craft that can expand into a richer image-space without losing inlay truth.

Preserve these style-core rules:

- dark rosewood field remains primary
- recessed-and-filled inlay construction remains active
- contrast-based picture formation remains structural
- flush surface logic stays visible
- subject matter remains inlay-born rather than illustrationally free
- full-frame coherence remains inside one Mysuru rosewood inlay world

Translate the image like this:

- **[MAIN SUBJECT]** becomes a Mysuru inlay-derived image-form built from fitted insert masses inside a dark rosewood field
- **[SECONDARY SUBJECTS]** also obey the same cut-field and insert-fit logic
- **[PANELS / BORDERS / ORNAMENTAL ZONES]** become richer inlay-led surface fields
- **[OBJECT SUPPORT / CONTEXT / ENVIRONMENT]** becomes a broader but still inlay-governed world rather than generic realism

Let these become richer:

- panel layering
- contrast hierarchy
- fitted contour relationships
- broader decorative field structure
- controlled 2D + 3D image-space expansion

Keep unchanged:

- rosewood-ground dominance
- inlay construction memory
- flush picture-surface behavior
- fitted insert precision
- Mysuru prestige-craft identity

Avoid:

- generic luxury wood styling
- print or paint behavior
- carving-first relief world
- random marquetry atmosphere
- realism-first scene design
- any major element leaving the inlay system

## Image-to-Image

Convert this source image into a **creative 2D + 3D Mysuru Rosewood Inlay translation** from Karnataka.

Preserve the source image's main subject count, object hierarchy, field structure, and scene readability, but reconstruct all visible elements through **dark rosewood inlay grammar**. Let the image become richer and more layered than a literal craft-panel study, but keep it fully rooted in **rosewood field dominance, recessed design logic, fitted contrasting inserts, flush picture-surface behavior, and Mysuru heritage craft identity**.

If the source image contains figures, animals, birds, mythological scenes, village life, natural scenes, borders, or decorative supports, convert them so they feel built through true inlay contrast fields. If the source image contains object bodies, panel supports, furniture surfaces, or environmental context, reorganize them so they belong to one coherent inlay-generated world rather than normal realism.

Retain:

- dark rosewood matrix
- cut-and-filled inlay construction
- fitted contour precision
- contrast-based picture readability
- flush surface coherence
- Mysuru prestige-object memory

Allow:

- richer layering
- broader field-world design
- controlled 2D + 3D expansion
- stronger full-frame integration

Do not simply add pale motifs onto dark wood.

Do not make it decorative furniture realism.

Do not make it generic marquetry art.

Do not lose the construction memory of inlay.  
Do not let the frame stop behaving like rosewood inlay.

## V3 — 3D / Realistic / Cinematic Translation

### Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from the authentic grammar of **traditional Mysuru Rosewood Inlay from Karnataka**. The image must feel believable, spatial, and materially convincing, but its realism must remain fully controlled by **dark rosewood field logic, recessed-and-filled inlay construction, fitted contrasting insert precision, flush polished surface behavior, and Mysuru heritage craft intelligence**.

Build the world from inside the inlay system: the dark rosewood field must remain structurally dominant, the imagery must still feel formed through cut recesses and fitted insert masses, and the whole frame must still read as if the world has been generated through **inlay intelligence** rather than through ordinary realism. The result should feel like Mysuru Rosewood Inlay has become a believable dimensional reality.

Material logic is critical. Keep the world anchored in **dark rosewood plus contrasting insert material behavior**. Do not replace this with generic wood realism. Do not make it polished luxury furniture photography. Do not let the base and insert relationship disappear into broad tonal realism.

Shape logic is critical. Forms must remain **contrast-separated, fitted, and inlay-born**. Even as the world gains dimensionality, its figures, animals, architecture, decorative fields, and object supports must still feel like they arise from insert-fit shape logic rather than from painterly modeling or carving mass.

Space logic is critical. Depth must grow from **field hierarchy, panel structure, insert layering, and surface-world expansion**, not from a generic cinematic scene. The whole frame must feel like a believable world whose physics, spacing, and visual hierarchy are still controlled by rosewood inlay grammar.

Do not make it a realistic palace or furniture scene with inlay accents.  
Do not make it generic luxury wood realism.  
Do not let the dark rosewood field stop mattering.  
Do not let flush inlay memory collapse into broad sculptural depth.  
Do not allow any major element to belong to another visual language.

### Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **full 3D realistic dimensional world** generated from authentic **Mysuru Rosewood Inlay from Karnataka**.

Treat the style as:

a dark rosewood picture-field system,  
a recessed-and-filled inlay construction language,  
a fitted contrast-shape world,  
and a believable reality whose space and volume are still controlled by inlay logic.

Style system that must remain unchanged:

- dark rosewood ground identity
- scooped-and-filled construction memory
- fitted contrasting insert logic
- flush surface coherence
- figurative/decorative picture-panel intelligence
- Mysuru heritage prestige-craft identity
- full-frame coherence inside one rosewood-inlay world

Translate the scene like this:

- **[MAIN SUBJECT]** becomes a fully dimensional Mysuru inlay-derived form built through field and insert contrast logic
- **[SECONDARY SUBJECTS]** become dimensional but still obey the same fitted inlay grammar
- **[PANELS / SUPPORTS / OBJECTS / SURFACES]** become tactile rosewood-inlay world elements
- **[ENVIRONMENT]** becomes a believable spatial field organized by panel hierarchy, contrast masses, and inlay-born structure

Increase:

- believable volume
- light-material interaction
- surface-world depth
- environmental completion
- full-frame coherence
- dimensional inlay-world realism

Do not lose:

- rosewood-ground dominance
- inlay construction memory
- fitted insert precision
- flush-surface reading
- contrast-based picture logic
- Mysuru heritage-object identity

Avoid:

- generic wood realism
- furniture-showroom styling
- print or paint behavior
- carving-mass replacement
- decorative accents added later
- any non-inlay system taking over the frame

## Image-to-Image

Convert this source image into a **full 3D realistic Mysuru Rosewood Inlay world** from Karnataka.

Preserve the source image's main subject count, object hierarchy, compositional structure, and readable order, but rebuild the entire image through **dark rosewood inlay grammar**. Convert ordinary materials into a believable **rosewood field plus fitted contrasting insert system**. Convert ordinary image-making into **recessed-and-filled picture construction**. Convert generic spatial logic into a dimensional world still controlled by panel hierarchy, fitted contour logic, and flush inlay memory.

If the source image contains figures, animals, birds, mythological scenes, natural scenes, village life, supports, panels, furniture surfaces, or decorative fields, transform them into Mysuru inlay-derived forms that still feel built by the inlay process. If the source image includes surrounding space or environment, rebuild it so the full frame feels born from a coherent rosewood-inlay world rather than from normal realism.

Retain:

- dark rosewood matrix
- recessed design-space logic
- fitted insert precision
- contrast-based image formation
- flush polished surface memory
- Mysuru heritage prestige reading

Increase:

- dimensional realism
- material depth
- spatial completion
- panel-world integration
- full-frame inlay coherence

Do not paste pale motifs over dark wood and call it inlay.

Do not turn it into generic marquetry realism.

Do not let realism erase construction memory.

Do not let the support object overpower the inlay world.

Do not allow one major element to remain outside the Mysuru rosewood inlay system.
