

Ngotekherh — Mizoram

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the authentic source-faithful woven logic of **Ngotekherh from Mizoram**. Do not treat this as generic black-and-white ethnic fabric, minimalist stripe design, fashion handloom, graphic monochrome pattern, or print-based cloth styling. Build the entire image as if it comes from a real Mizo loom-loom cloth system whose deepest identity is **white support field, broad black border authority, distributed black stripe order, square-making white interval spacing, precision black woven control, fine smooth finish, and waist-wrap cloth behavior**.

The image must be generated through **field law**, not decorated afterward. White must behave as the carrying field. Black must behave as structural authority. Borders must govern the edge. Internal stripes must organize the field. Empty white intervals must feel counted and tensioned, not random blank space. The result must feel woven-first, not graphic-first.

If figures appear, they must not remain generic realistic people wearing a Ngotekherh cloth. Their silhouette, body-blocking, proportion emphasis, clothing behavior, and spacing relation must also be rebuilt through Ngotekherh field logic: border hierarchy, interval discipline, stripe restraint, and wrap-structured order. If props, animals, architecture, ground, trees, or environment appear, they must also inherit this white-black field intelligence so the whole frame feels born from one woven grammar.

Surface behavior must stay precise and loom-built: clean black areas, smooth fine finish, strong edge authority, restrained stripe spacing, and no print-surface contamination. The image must feel like a real woven system generated the full scene.

Do not make this generic Mizo striped cloth, monochrome textile decor, print-like stripe design, black-white graphic art, modern minimal fashion styling, soft shawl behavior, or a realistic image with one Ngotekherh garment added later. Do not erase the broad borders. Do not randomize the spacing. Do not let one important element remain in another visual language.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** in the authentic source-faithful woven logic of **Ngotekherh from Mizoram**.

Treat the style as a **precision white-black field cloth system** built from:

- white support-field authority
- broad black border force
- distributed black stripe-field order
- square-making interval spacing
- precision black woven control over white ground
- smooth fine loom-built finish
- waist-wrap cloth intelligence

Preserve these non-negotiable rules:

- white remains the carrying field, not empty filler
- black remains the structural force, not decorative color
- broad borders remain the strongest edge authorities
- stripes remain woven field-order, not graphic overlay
- spacing remains counted and square-making in spirit
- all visible elements must belong to one Ngotekherh field-world
- the result must feel woven, not printed

Translate the image like this:

- **[MAIN FIGURE / MAIN FORM]** becomes a presence organized by white-black field hierarchy and wrap-aware structural restraint
- **[SECONDARY FIGURES / SECONDARY FORMS]** also obey border authority, interval logic, and stripe order
- **[OBJECTS / PROPS / ANIMALS]** become forms whose divisions, contours, and surface organization inherit Ngotekherh field logic
- **[GROUND / TREES / ARCHITECTURE / BACKGROUND]** becomes a world organized by edge-to-center authority, stripe spacing, and white-black woven discipline

Keep:

- field hierarchy
- border force
- stripe-order precision
- interval counting
- woven smoothness
- body-wrap intelligence

Avoid:

- generic monochrome ethnic textile
- black-white fashion minimalism
- graphic stripe illustration
- print logic
- decorative surface transfer
- one styled garment inside a generic world

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Ngotekherh from Mizoram**.

Preserve the source image's subject count, main action, pose relationships, and core readability, but rebuild the entire frame through **Ngotekherh field law**: white support field, broad black border authority, distributed stripe order, square-making interval logic, precision woven black control, and wrap-aware cloth structure. The result must not look like a normal image dressed in black-and-white textile. It must feel like the whole image has been reconstructed by a white-black woven field system.

If the source contains figures, rebuild their silhouette, spacing, clothing behavior, and visual mass through Ngotekherh structure rather than generic realism. If the source contains props, animals, surfaces, boundaries, or environment, translate them into the same field grammar so border logic, stripe spacing, interval order, and woven restraint extend across the full frame.

Do not simply add Ngotekherh to costumes. Do not turn it into black-and-white patterning. Do not make it shawl-like. Do not let the broad borders disappear. Do not let the world stay generic while only the garment changes.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in a **creative 2D + 3D translation rooted in the source grammar of Ngotekherh from Mizoram**. This is not literal artisan simulation and not “the same cloth with more texture.” It must remain deeply rooted in Ngotekherh's actual source system: **white support field, broad black border authority, distributed stripe order, square-making interval spacing, precision black woven control, and wrap-structured cloth intelligence**. Then translate that grammar into a richer image-world where the source field logic controls not only cloth but also form, spacing, hierarchy, object design, and environment.

The image should feel as if Ngotekherh's internal cloth intelligence has expanded beyond textile into a larger visual world. Let the **border** become a compositional force. Let the **stripe system** become structural rhythm. Let the **white intervals** become spatial intervals and negative-space logic. Let the **precision of the weave** become discipline in contour, grouping, and environmental ordering. Let the **wrap logic** become figure-world logic. The

result may become more image-powerful, more dimensional, and more creative, but it must still feel **Ngotekherh-born**, not realism-born.

If figures appear, they must become forms shaped by white-black field logic, border discipline, interval spacing, and wrap-derived bodily structure rather than generic anatomy-first realism. If props, animals, trees, architecture, and background appear, they must inherit the same field intelligence so the frame feels generated from Ngotekherh rather than merely decorated by it.

Material behavior should preserve woven precision, smooth controlled black areas, crisp edge authority, and restrained monochrome-biased field hierarchy while allowing richer hybrid dimensionality. The world must still feel counted, disciplined, field-generated, and structurally woven.

Do not make this generic handcrafted monochrome illustration, black-and-white stripe art, modernist ethnic graphics, decorative minimalism, or a normal scene with Ngotekherh cloth details added afterward. Do not turn V2 into print design with depth. Do not enlarge stripes until they stop feeling woven and spacing-dependent. Do not leave the environment generic.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** as a creative 2D + 3D translation rooted in the source grammar of **Ngotekherh from Mizoram**.

Treat the style as a **white-black woven field-order system** and preserve these core rules:

- white support field remains primary
- broad black border force remains active
- distributed stripe order stays structural
- square-making interval logic remains alive
- precision woven control stays stronger than decoration
- wrap-aware cloth logic remains present
- the whole frame must feel generated from Ngotekherh

Translate the image like this:

- **[MAIN FIGURE / MAIN FORM]** becomes a hybrid 2D + 3D presence built from white-black field hierarchy, border force, and interval discipline
- **[SECONDARY FIGURES / FORMS]** also follow the same stripe-order and spatial-spacing logic
- **[OBJECTS / PROPS / ANIMALS / DIVISIONS]** inherit Ngotekherh's border-field intelligence and woven precision
- **[ENVIRONMENT / BACKGROUND / SPATIAL ORDER]** becomes a richer visual world organized by edge-to-center authority, counted intervals, stripe rhythm, and field restraint

Let these become richer:

- border-to-field relation
- stripe-spacing rhythm
- interval-controlled negative space
- figure-environment ordering
- hybrid 2D + 3D depth
- whole-frame field coherence

Keep unchanged:

- source-rooted Ngotekherh grammar
- white-black field law
- woven precision
- border authority
- interval logic
- branch purity

Avoid:

- graphic monochrome poster logic
- decorative stripe illustration
- modern fashion minimalism
- print-based surface styling
- enlarged pattern spectacle
- generic dimensional world around one styled garment

Image-to-Image

Convert this source image into a creative 2D + 3D translation rooted in the source grammar of **Ngotekherh from Mizoram**.

Preserve the source image's subject count, action, pose relationships, and scene readability, but reconstruct all visible elements through **Ngotekherh field intelligence**. The image must no longer behave like ordinary realism or generic illustration. Rebuild it through white support-field hierarchy, broad black border force, distributed stripe order, square-making interval logic, precision black control, and wrap-aware structural spacing.

Let the scene become more hybrid and more image-rich than a strict cloth study, but keep the style rooted in Ngotekherh's actual grammar. Figures must become more field-governed and interval-structured. Props, animals, objects, and boundaries must inherit border logic and stripe rhythm. Environment and space must stop being generic and become organized by Ngotekherh's counted field-order.

Do not place Ngotekherh on top of a normal image. Do not make it monochrome stripe art. Do not turn it into decorative black-and-white worldbuilding. Do not let the style survive only in costume while the rest of the frame remains unchanged.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world where the entire Ngotekherh style system becomes believable reality**. “Realistic” here does not mean replacing the style with generic realism. It means believable volume, material behavior, gravity, spatial depth, and environmental completion while **Ngotekherh still controls the world**.

Build the image as if **Ngotekherh from Mizoram truly exists as world-law**. Translate its full grammar into reality: **white support field, broad black border authority, distributed stripe order, square-making interval logic, precision woven black control, smooth fine finish, and wrap-structured body logic**. Every major element must adapt to that system. Figures must feel shaped by field hierarchy and interval discipline. Objects and animals must feel bounded by border-force and stripe-order. Environmental divisions must feel controlled by edge authority, counted spacing, and white-black field logic. The whole world must feel disciplined, woven, clear, and structurally restrained rather than decorative.

The realism must remain style-faithful. The cloth cannot become ordinary fashion textile. The borders cannot become decorative trim. The stripe order cannot become generic pattern. The interval logic cannot disappear into realism. The white field cannot become empty background. The world must feel as though Ngotekherh itself generated reality, not as though a realistic world borrowed Ngotekherh.

Material behavior should preserve clean woven black fields, fine smooth surface control, crisp edge authority, wrapped body logic, and precise field spacing. Composition should remain controlled by border-to-field hierarchy, stripe restraint, interval structure, and wrap-aware organization rather than casual scene-flow.

Do not make this generic realism with Mizo clothing, minimalist monochrome environment design, black-and-white decorative worldbuilding, fashion-photography realism, or a normal environment with Ngotekherh cloth attached. Do not let realism become the main driver. Do not let one important element remain generic. The official source defines Ngotekherh through a white ground, two broad black borders, additional thin black stripes, square-like white intervals, and precision black warp dominance over the white weft.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** as a full 3D realistic dimensional world where the entire **Ngotekherh from Mizoram** style system becomes believable reality.

Treat the style as a **precision white-black woven field world** and preserve these non-negotiable rules:

- white support field still drives the frame
- broad black borders remain major structural authorities
- distributed stripe order remains active
- square-making interval logic still organizes space
- precision woven control remains stronger than decoration
- wrap-aware cloth intelligence still matters
- realism remains subordinate to Ngotekherh structure
- the whole frame must belong to one Ngotekherh world

Translate the world like this:

- **[MAIN FIGURE / MAIN FORM]** becomes a believable volumetric presence governed by field hierarchy, border order, and interval spacing
- **[SECONDARY FIGURES / FORMS]** become branch-consistent dimensional presences under the same white-black woven law
- **[OBJECTS / PROPS / ANIMALS / THRESHOLDS / DIVISIONS]** become structurally bounded forms shaped by border force, stripe order, and precision field control
- **[ENVIRONMENT / BACKGROUND / WORLD STRUCTURE]** becomes a full spatial system organized by edge authority, counted intervals, black-white hierarchy, and wrap-aware restraint

Increase:

- believable volume
- material-light interaction
- field depth and spacing
- figure-ground separation
- environmental completion
- whole-frame world coherence

Do not lose:

- white-black field identity
- border authority
- stripe-order structure
- interval logic
- woven precision
- whole-frame rebuild rule

Avoid:

- generic realism with traditional costume
- decorative monochrome stripe world

- print-surface shortcuts
- graphic pattern environments
- ordinary realism plus Ngotekherh cloth
- any important element remaining in another visual language

Image-to-Image

Convert this source image into a full 3D realistic dimensional world where the entire **Ngotekherh from Mizoram** style system becomes believable reality.

Preserve the source image's subject count, major action, pose logic, and core readability, but rebuild the whole frame through **Ngotekherh world-law**. Replace ordinary realism or ordinary stylization with white support-field authority, broad black borders, distributed stripe order, square-making interval logic, precision black woven control, and wrap-aware structural organization.

If the source contains figures, they must become believable volumetric presences shaped by field hierarchy and interval discipline rather than generic costume realism. If the source contains props, animals, architecture, boundaries, or environment, they must also be reconstructed through the same border-and-field intelligence so the whole world feels built from Ngotekherh. The realism must remain subordinate to the style, not the other way around.

Do not simply add Ngotekherh garments to a realistic scene. Do not turn the cloth into monochrome stripe decoration. Do not erase the border-field logic into generic realism. Do not make the world minimal and modern instead of woven and source-rooted. The final image must feel like Ngotekherh itself became believable reality.
