

Paithani - Maharashtra

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic Paithani handwoven silk-and-zari tradition of Maharashtra. Do not treat this as generic luxury silk, generic brocade, generic bridal textile, printed peacock fabric, or embroidery-first ornament. Build the image as if it comes from a true Paithani sari system where the whole visual order is governed by handwoven silk field, zari border architecture, and a dominant pallu/padar zone.

The image must preserve authentic Paithani hierarchy:

- the body is a supporting woven silk field, either plain or controlled with handwoven buttis
- the border is a structural zari edge zone, symmetrical, weight-bearing, and compositionally necessary
- the padar/pallu is the highest-authority zone, denser, more intricate, prestige-bearing, and motif-rich

Use authentic Paithani motif behavior:

mor, bangdi mor, kamal, asawali, tota, floral-vine, and related traditional woven motifs, but only as loom-built motifs that feel interlocked into the cloth. Motifs must not behave like painted illustration, digital sticker motifs, wallpaper repeats, or embroidery patches.

Use true material logic:

rich handwoven silk luminosity, controlled zari brilliance, counted thread precision, slow handloom construction memory, and a woven surface where motifs feel inseparable from the cloth. The result must feel handbuilt through interlocked weft intelligence, not drawn and later decorated.

The full image must obey Paithani textile intelligence. If figures, drape, props, or environment are visible, they must all be organized by Paithani logic: field, edge, terminal prestige zone, controlled density, woven rhythm, and sari-scale compositional order.

Avoid:

generic Banarasi-like brocade richness, generic bridal glamour, foil-gold shine, satin-gloss fake silk, printed peacock fabric, equal-density decoration everywhere, borders behaving like trim tape, padar behaving like enlarged border repeat, realism with Paithani motifs pasted on top.

The final result must feel like an actual Paithani handloom world first: woven, hierarchical, sari-architectural, silk-and-zari, source-faithful, and unmistakably born from Maharashtrian Paithani grammar.

Reusable Variable Template

Create [SUBJECT / SCENE] in the authentic Paithani handwoven silk-and-zari tradition of Maharashtra.

Core style system to preserve:

- authentic handwoven silk-and-zari identity
- body, border, and padar/pallu hierarchy
- border as structural symmetrical edge architecture
- padar as the densest and most prestigious motif zone
- motifs that feel woven through interlocked short wefts, not applied afterward
- controlled silk luminosity and structural zari richness
- handloom precision, counted thread discipline, and slow-made woven authority

Translate the scene like this:

- [MAIN SUBJECT] becomes organized through Paithani textile hierarchy rather than generic realism
- [SECONDARY SUBJECTS] obey the same woven ordering and motif discipline
- [OBJECTS / PROPS] become Paithani-aware woven forms, not unrelated realistic objects
- [ENVIRONMENT / BACKGROUND] becomes a field governed by body-zone calm, border-edge control, and padar-like prestige concentration where appropriate

Use these motif families only as loom-born woven units:

mor, bangdi mor, kamal, asawali, tota, floral-vine, butti, and related Paithani-compatible forms.

Keep:

woven identity, sari-scale architecture, motif placement discipline, silk-zari material truth, hierarchical density.

Avoid:

generic luxury silk, generic brocade, printed textile look, embroidery drift, decorative peacock overload, equal-density motif spread, glitter gold, realism with Paithani surface styling added later.

The final result must feel truly handwoven and structurally Paithani, not merely Paithani-inspired decoration.

Image-to-Image

Convert this source image into an authentic Paithani handwoven silk-and-zari visual system from Maharashtra.

Preserve the source image's subject count, core action, main relationships, and readability, but rebuild the full image through Paithani sari intelligence. Replace generic surface behavior with true woven hierarchy: a calm or butti-governed body field, structural zari border logic, and a dominant prestige-bearing padar/pallu zone. Replace decorative motifs

with loom-born Paithani motifs that feel interlocked into the cloth through counted thread construction.

Do not simply place peacocks, lotuses, or gold borders onto the existing image. Do not convert the image into generic rich silk. Do not use printed pattern logic. Rebuild the scene so that all visible elements feel born from Paithani weaving structure, silk-zari material tension, and source-faithful sari architecture.

The final result must read as a genuine Paithani-woven world, not as a normal image covered with Paithani references.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image world rooted in the Paithani handwoven silk-and-zari grammar of Maharashtra. This is not a literal museum-documentation image and not a generic decorative pattern world. It must feel like authentic Paithani weaving intelligence expanding into a richer stylized visual system while staying fully source-rooted.

Keep Paithani's deep structure unchanged:

- body, border, and padar/pallu hierarchy remains primary
- padar remains the densest and most authoritative zone
- border remains structural and symmetrical
- motifs remain loom-born and interlocked, never painted-on or printed-on
- silk and zari remain the material core
- woven field logic must remain stronger than free illustration

Allow the image to become more expressive:

the body field can become a more controlled stylized visual plane, the border can extend its edge logic more strongly across the frame, and the padar can become a richer compositional climax. Motifs such as mor, bangdi mor, kamal, asawali, tota, and floral-vine structures may become more visibly designed, but they must still feel as if they were generated by weaving discipline, not by brush painting or graphic ornament software.

Blend flat woven field intelligence with selective depth and crafted dimensionality. The result should feel like Paithani itself has begun shaping the whole image-world: figures, props, drape, divisions, and environment all organized by textile hierarchy, woven rhythm, contrast zones, and prestige concentration.

Avoid:

generic decorative flat design, modern vector peacock styling, print-like repeat patterns, embroidery drift, generic brocade glamour, uncontrolled motif spread, equal visual density across the frame, glittery gold, fashion-first styling.

The final result must feel like a stylized but source-rooted Paithani world where the whole frame is governed by woven hierarchy and silk-zari intelligence.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the Paithani handwoven silk-and-zari tradition of Maharashtra.

Preserve these style-core rules:

- Paithani remains woven-first, never surface-first
- body, border, and padar hierarchy remains intact
- motifs remain loom-disciplined and interlocked in feeling
- silk and zari remain the material memory
- border acts as edge architecture
- padar acts as the prestige climax
- the whole frame inherits textile ordering

Translate the scene like this:

- [MAIN SUBJECT] becomes organized through Paithani hierarchy rather than generic realism
- [SECONDARY SUBJECTS] obey the same zone-based woven logic
- [OBJECTS / PROPS] become Paithani-aware forms shaped by motif families, border discipline, and field control
- [ENVIRONMENT / BACKGROUND] becomes a stylized woven world organized by calm body-field areas, strong edge logic, and dense prestige-bearing focal zones

Let these become richer:

- stylized field-space
- controlled hybrid flatness and depth
- stronger extension of border and padar logic across the frame
- more expressive motif grouping

Keep unchanged:

- woven identity
- motif plausibility as loom-born forms
- silk-zari material memory
- hierarchy stronger than decoration

Avoid:

generic pattern-board styling, vector ornament look, print-repeat logic, decorative peacock overload, brocade confusion, realism with Paithani motifs added later.

The final result must feel like Paithani grammar itself has redesigned the image-world.

Image-to-Image

Convert this source image into a creative 2D + 3D Paithani silk-and-zari world from Maharashtra.

Preserve the source image's subject count, main action, pose logic, and scene readability, but reconstruct the full image through Paithani woven hierarchy. Replace generic organization with a body-field zone, structural border logic, and a strong padar-like prestige concentration. Replace decorative motifs with loom-disciplined Paithani motifs that still feel interlocked and woven, even in a more stylized image space.

Allow the image to become more designed, more hybrid in flatness and depth, and more compositionally expressive, but do not let it become a generic decorative illustration. Every visible part of the frame must feel reorganized by Paithani textile intelligence: edge discipline, contrast zoning, silk-zari material memory, and motif hierarchy.

Do not simply add gold peacocks, lotus borders, or festive silk textures. Rebuild the image so the whole visual world feels generated by Paithani structure.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the Paithani handwoven silk-and-zari tradition of Maharashtra. The image must feel materially real, spatially believable, and fully volumetric, but the realism must still be governed by Paithani weaving intelligence rather than by ordinary realism with a Paithani sari added later.

Convert the whole grammar into dimensional reality:

- the body remains the supporting silk field
- the border remains structural edge architecture
- the padar remains the densest prestige-bearing terminal zone
- motifs such as mor, bangdi mor, kamal, asawali, tota, floral-vine, and buttis remain loom-born in logic
- silk and zari remain materially truthful
- hierarchy remains stronger than surface glamour

Let the world become fully dimensional:

believable drape, weight, fold behavior, light on woven silk, tactile zari presence, environmental completion, and realistic spatial depth. But do not let realism erase Paithani structure. The motifs must still feel born from counted interlocked weft intelligence, not from digital printing, embroidery, or pasted embellishment.

The whole frame must belong to one Paithani-born world. If figures, props, environment, architecture, or staging are visible, they must all inherit Paithani hierarchy, zone emphasis, woven rhythm, and silk-zari material order.

Avoid:

generic fashion realism, generic bridal photography, CGI gold foil effect, satin-plastic cloth, printed peacock motifs, brocade drift, ordinary realism with one Paithani garment, costume-only styling.

The final result must feel like Paithani weaving grammar itself became a believable dimensional reality.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the Paithani handwoven silk-and-zari tradition of Maharashtra.

Style system that must remain unchanged:

- woven-first identity
- body, border, and padar hierarchy
- padar as prestige center
- border as structural symmetrical edge
- motifs behaving as loom-born interlocked forms
- silk luminosity and truthful zari presence
- whole-frame Paithani ordering

Translate the scene like this:

- [MAIN SUBJECT] becomes a fully dimensional form governed by Paithani hierarchy and textile logic
- [SECONDARY SUBJECTS] remain branch-consistent and ordered by the same woven intelligence
- [OBJECTS / PROPS] become tactile forms shaped by Paithani motif families, edge logic, and prestige zoning
- [ENVIRONMENT / BACKGROUND] becomes a believable spatial field organized by body-field calm, border-like edge control, and padar-like concentration of visual authority

Increase:

- believable drape and material weight
- light-material interaction on woven silk and zari
- spatial depth
- tactile richness
- scene completion

Do not lose:

- woven hierarchy
- motif plausibility as interlocked structures
- padar dominance
- border authority
- Paithani identity stronger than generic realism

Avoid:

fashion editorial realism, printed-surface shortcuts, foil gold, satin fake silk, brocade confusion, ordinary environment with Paithani costume added later.

The final result must feel like an inhabitable Paithani world, not a realistic world wearing Paithani.

Image-to-Image

Convert this source image into a full 3D realistic Paithani silk-and-zari world from Maharashtra.

Preserve the source image's subject count, core action, main pose logic, and readability, but rebuild the entire image through Paithani handwoven hierarchy. Replace ordinary surface behavior with silk body-field logic, structural zari border logic, and a dominant padar-like prestige zone. Replace decorative motif treatment with loom-born Paithani motifs that still feel structurally embedded even in full dimensional realism.

Expand the scene into believable material depth, drape, light response, and spatial completion, but do not let realism become the main driver. The image must still be governed by Paithani textile intelligence. Every visible element must belong to the same system, so the result feels woven into reality rather than decorated after the fact.

Do not simply dress the source image in a Paithani sari. Do not paste peacocks, lotuses, or gold borders onto normal realism. Rebuild the whole world so it feels as if Paithani grammar became real.
