

Puanchei - Mizoram

V1 — Authentic Style

Universal Hard Prompt

Create a full image in the **authentic source-faithful grammar of Moirang Phee from Manipur**. Build the entire frame as a **border-authored woven world**, not as generic Manipuri textile styling, not as print-based geometric decoration, and not as realism with a Moirang border added afterward. The image must feel as though it is generated by **Moirang Pheejin edge-law**: a **handwoven extra-weft border**, made of **inward-pointing stepped triangular motifs**, with a **calmer cloth body** and a **stronger symbolic edge**. The border must be the main identity zone.

Use a woven-world logic where:

- the body is quieter and supportive
- the border is structurally charged
- the stepped motif feels woven, not printed
- the inward rhythm toward the center remains clear
- the edge carries symbolic force linked to Pakhangba
- the cloth remains ceremonial, wearable, and drape-aware

If the frame includes figures, props, or environment, they must also be rebuilt through **edge-authored hierarchy**, **woven structural contrast**, and **ceremonial cloth intelligence**, not left generic. The whole frame should feel like a real Moirang Phee system expanded into image-space, not like ordinary realism wearing a traditional border.

Do not allow:

- generic Manipuri handloom
- generic temple-border triangles
- jacquard-like ornamental density
- printed textile look
- all-over geometric repetition
- costume-only use of the motif
- flat wallpaper behavior
- realism-first figure or environment logic

Reusable Variable Template

Create **[SCENE / SUBJECT / WORLD / EVENT]** in the authentic source-faithful grammar of **Moirang Phee**.

Translate the entire frame through:

- Moirang Pheejin border law
- extra-weft woven structure
- inward stepped triangular rhythm
- border-to-body inequality
- symbolic edge meaning
- ceremonial drape-aware cloth intelligence

Use this conversion map:

- **[MAIN SURFACES / PRIMARY FIELDS]** become calmer woven body-zones
- **[EDGES / THRESHOLDS / MAJOR DIVISIONS]** become Moirang Pheejin-authored border zones
- **[TRIANGULAR MOTIF RHYTHM]** must remain stepped, odd-numbered in spirit, and inward-facing
- **[FIGURES / OBJECTS / FORMS]** must be rebuilt through edge-led structure and woven rhythm, not left realistic
- **[SPACE / COMPOSITION]** must be authored from border toward body, not from center outward
- **[COLOR]** must behave as border-to-body contrast, not equal all-over pattern

Keep:

- extra-weft feel
- woven clarity
- edge symbolism
- ceremonial cloth logic
- inward direction
- border dominance

Avoid:

- printed pattern logic
- generic geometric ethnicity
- all-over motif spread
- costume-only styling
- realism plus border trim
- symmetric ornamental prettiness without structural edge law

Image-to-Image

Convert this source image into the **authentic source-faithful world of Moirang Phee**.

Preserve the source image's **main subject count, primary action, scene readability, and relationship structure**, but rebuild the entire frame through **border-authored woven intelligence**. Replace ordinary realism, neutral design, or generic textile styling with:

- Moirang Pheejin edge logic
- extra-weft structural memory
- inward stepped triangular rhythm
- calmer body field versus stronger edge field
- ceremonial cloth behavior
- symbolic border meaning

Do not simply add a Moirang border to garments or frame edges. Rebuild the image so the whole frame feels like it is generated by **Moirang Phee's edge-law**. If figures appear, they must submit to woven directional rhythm. If space appears, it must be organized from edge toward body, not as generic scene depth.

Do not allow:

- generic Manipuri clothing
- decorative triangle borders
- print-surface simulation
- wall tapestry logic
- realism with ethnic trim
- all-over pattern contamination

V2 — Artisan Translation

Universal Hard Prompt

Create a full image in the **authentic handcrafted dimensional version of Moirang Phee**. Keep the full source grammar intact, but translate it into a **richer dimensional border-world** without turning it into ordinary realism. The result must still be authored by:

- Moirang Pheejin border identity
- extra-weft structural memory
- inward stepped triangular rhythm
- symbolic edge meaning
- body-versus-border hierarchy
- ceremonial cloth intelligence

Allow the image to gain:

- more tactile woven edge presence
- stronger fold and drape articulation

- more visible edge tension
- richer body-support-field calmness
- more legible spatial relation between edge and center

But keep the world woven and edge-authored. The dimensionality must come from **border-law becoming more bodily and spatial**, not from adding generic textile texture or realism shading.

Do not allow:

- embroidery-like heaviness
- thick brocade behavior
- jacquard density
- decorative ethnic richness
- realism-first cloth rendering
- all-over border multiplication

Reusable Variable Template

Create **[SCENE / SUBJECT / WORLD / EVENT]** in the **authentic handcrafted dimensional version of Moirang Phee**.

Translate the whole frame through:

- Moirang Pheejin edge grammar
- extra-weft structural tension
- inward stepped rhythm
- calmer body field
- stronger tactile border-world relation
- ceremonial woven depth

Use this map:

- **[MAIN FIELDS]** remain calmer woven body-zones
- **[EDGES / DIVISIONS / TRANSITIONS]** become richer dimensional Moirang Pheejin carriers
- **[TRIANGULAR FORMS]** gain more tactile spatial presence while staying woven and stepped
- **[FIGURES / OBJECTS / SURFACES]** inherit edge-authored structural rhythm
- **[DRAPE / FOLD / HANG]** become more legible and materially present
- **[SPACE]** becomes dimensional through edge-to-center logic, not realism-depth first

Keep:

- border primacy
- extra-weft spirit

- ceremonial cloth intelligence
- symbolic edge force
- inward directional pull

Avoid:

- realism with border decoration
- print-graphic dimensionality
- textile texture without structural change
- all-over motif drift
- costume-only translation

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional world of Moirang Phee**.

Preserve the original image's **main action, subject count, and readability**, but rebuild the entire frame as a **dimensional border-authored woven world**. Replace neutral realism or generic design with:

- richer Moirang Pheejin edge presence
- tactile extra-weft border memory
- stronger body-versus-border hierarchy
- inward stepped directional form
- ceremonial drape logic
- woven structural contrast

Do not only place a Moirang border on clothing or outer frame lines. Rebuild the image so it feels as though the entire world has become more tactile under **Moirang edge-law**. The border must still govern; the body must still support.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic world** generated by the grammar of **Moirang Phee**. The full frame must feel as though **Moirang Pheejin border-law itself became world-law**. This is not a realistic scene with Moirang borders added to garments, curtains, or props. The entire image must obey:

- edge-authored hierarchy

- extra-weft structural memory translated into form-structure
- inward stepped triangular rhythm translated into spatial rhythm
- body-versus-border inequality translated into compositional and environmental hierarchy
- symbolic edge force
- ceremonial cloth intelligence transformed into world behavior

Build a believable cinematic world, but keep it governed by Moirang logic:

- edges must author the composition
- transitions must feel woven and directional
- figures must submit to border-rhythm structure
- objects and spaces must inherit inward edge pull
- color contrast must remain stronger at the edge than in the body-field

Do not allow:

- generic northeastern fantasy
- realism with ethnic border accents
- architecture or set design decorated with triangles
- costume-first translation
- all-over geometric stylization
- ordinary realism with only a palette and border cue

Reusable Variable Template

Create **[SCENE / WORLD / EVENT / SUBJECT]** as a **fully volumetric cinematic version of Moirang Phee**.

Translate the entire frame through:

- Moirang Pheejin edge-law
- extra-weft structural memory
- inward stepped spatial rhythm
- symbolic border meaning
- body-versus-border hierarchy
- ceremonial drape-derived world intelligence

Use this map:

- **[MAIN FIGURES]** become cinematic forms authored by edge-rhythm rather than realism-first anatomy
- **[OBJECTS / PROPS / THRESHOLDS]** become border-like structural carriers
- **[ENVIRONMENT / LANDSCAPE / ARCHITECTURE / SPACE]** is organized from edge toward body-center

- **[COLOR / VALUE / LIGHT]** strengthens border charge and preserves calmer body fields
- **[COMPOSITION]** must feel inward-pulling, not center-exploding

Keep:

- border primacy
- inward structural movement
- ceremonial cloth memory
- symbolic edge force
- woven logic over decorative logic

Avoid:

- realism plus border trim
- costume-only Moirang styling
- decorative triangle architecture
- generic geometric fantasy
- full-field pattern spread

Image-to-Image

Convert this source image into a **fully volumetric cinematic world generated by Moirang Phee grammar**.

Preserve the source image's **subject count, major action, relationship clarity, and scene readability**, but rebuild the whole frame through:

- Moirang Pheejin edge structure
- extra-weft logic translated into form law
- inward stepped rhythm translated into space and movement
- body-versus-border hierarchy translated into world hierarchy
- symbolic edge identity
- ceremonial woven order

Do not merely add Moirang borders to costumes or object edges. Rebuild the scene so it feels like the world itself is authored by **edge-first woven law**. The resulting image should feel cinematic, complete, and world-scale, but still unmistakably Moirang Phee.
