

Sandalwood Carving - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of **traditional Karnataka sandalwood carving**, especially the **Mysuru-rooted fine carving tradition**. Build the image as if it comes from a real handcrafted sandalwood object-world: precious fragrant sandalwood, intimate object scale, minute hand-carved detail, dense ornamental intelligence, and close-view heritage craftsmanship. The image must read first as **Karnataka sandalwood carving**, not as generic carved wood décor, not as furniture carving, not as machine-routed ornament, and not as a broad “royal wooden luxury” object.

Use real material logic. The object must feel made from **Indian sandalwood**, with refined carved wood presence, warm pale-to-golden sandalwood tone, delicate surface finish, and precious small-object value. Do not make it look like rosewood, teak, resin, molded composite, ivory imitation, cast material, or lacquered showroom décor. The material must feel fragrant, rare, and carving-specific.

Use real carving logic. The form must feel **subtractive and hand-carved**, not assembled, printed, engraved after the fact, or digitally embossed. Keep extremely fine detail, delicate relief transitions, undercut ornamental depth, miniature carving intelligence, and dense hand-resolved intricacy. The object should feel as if it took weeks or months of careful labor.

Use real scale logic. The image must preserve the **intimate object-world** of sandalwood carving: figurines, jewelry boxes, caskets, decorative objects, small tables, or related close-view crafted forms. Even if the carving becomes elaborate, it must still feel meant for near viewing and careful inspection, not for monumental distant reading.

Use real motif logic. If mythology, temple architecture, wildlife, or floral carving appears, it must feel structurally embedded into the carved wood, not pasted on as decorative illustration. The motif-world must behave like a fine ornamental carving language, not like graphic storytelling translated loosely into wood.

Keep the full frame inside one sandalwood-carving world.

Do not make it generic wood carving.

Do not make it furniture-first.

Do not make it broad rough carving.

Do not make it glossy luxury décor.

Do not let any major element belong to another carving language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE]** in the authentic visual logic of **traditional Karnataka sandalwood carving**, especially the **Mysuru fine-carving heritage**.

Treat the style as:

a precious fragrant wood-carving system,
a minute hand-carved object tradition,
an intimate close-view ornamental language,
and a heritage craft world shaped by mythology, temple architecture, wildlife, and floral carving.

Core style system to preserve:

- sandalwood material identity
- intimate crafted object scale
- minute hand-carved detail density
- subtractive carving logic
- refined carved wood finish
- mythological / temple / floral / wildlife ornamental vocabulary
- Mysuru / Karnataka heritage-object feeling
- full-frame consistency so every visible element belongs to the same sandalwood-carving world

Translate the image like this:

- **[MAIN OBJECT / MAIN FORM]** becomes a real Karnataka sandalwood-carved object with dense hand-resolved detail
- **[SECONDARY FORMS / SUPPORTING ELEMENTS]** also obey the same fine carving grammar
- **[BORDERS / SURFACE PANELS / RELIEF ZONES]** become carved ornamental fields rather than printed or engraved graphics
- **[ENVIRONMENT / DISPLAY CONTEXT / SUPPORT STRUCTURE]** must support intimate heritage-object reading rather than generic realism

Material logic:

keep precious fragrant sandalwood truth, refined carved wood presence, and warm delicate wood tonality

Form logic:

keep miniature relief intelligence, close-view detail, ornamental compression, and carved depth rather than broad sculptural mass

Meaning logic:

keep mythology / temple / wildlife / floral carving as a structurally embedded heritage vocabulary, not random decoration

Keep:

- sandalwood identity
- minute hand-carved intricacy

- intimate object logic
- heritage-object dignity
- carved ornamental density

Avoid:

- generic carved wood
- furniture-first reading
- machine symmetry
- laser-cut or routed look
- resin / ivory / stone misread
- broad sculpture logic
- one carved patch inside a non-sandalwood world

Image-to-Image

Convert this source image into the authentic visual world of **traditional Karnataka sandalwood carving**, especially the **Mysuru fine-carving heritage tradition**.

Preserve the source image's main object count, compositional hierarchy, and readable structure, but rebuild the entire image through **precious sandalwood object logic**. Replace generic materials with fragrant refined sandalwood. Replace ordinary surfaces with minute hand-carved ornamental depth. Replace illustration-like imagery with true carved relief intelligence.

If the source image contains a box, casket, figurine, panel, decorative object, or furniture element, convert it into a genuine Karnataka sandalwood-carved object. If mythology, temple architecture, wildlife, or floral motifs appear, rebuild them so they feel carved into the wood through dense miniature detail rather than drawn on top. If the source image contains context or environment, keep it subordinate to the close-view heritage-object world.

Retain source-memory:

- precious sandalwood material truth
- minute hand-carved detail
- intimate object scale
- subtractive carving depth
- ornamental compression
- Mysuru-rooted heritage reading

Do not make it generic carved wood.

Do not make it showroom luxury décor.

Do not make it broad furniture carving.

Do not paste ornamental motifs over a normal object.

Do not let the frame stop feeling like a real sandalwood-carving tradition.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D image-world** rooted in the authentic logic of **traditional Karnataka sandalwood carving**, especially the **Mysuru fine-carving tradition**. This version must remain source-rooted but may expand beyond literal object-documentation into a richer visual system built from **precious sandalwood material, minute hand-carved detail, relief depth, ornamental compression, and intimate heritage-object intelligence**.

The world must still feel generated from **sandalwood carving grammar**, not from generic “royal wood luxury.” Keep sandalwood identity primary, keep close-view detail active, and keep the motif world of mythology, temple architecture, wildlife, and floral carving structurally embedded into the forms.

Use true translation logic. Allow the carving to become more layered, more compositionally expressive, and more spatially suggestive, but keep every form visibly born from **fine subtractive wood carving**. The image can feel richer than a straightforward craft-object photo, yet it must still feel like carved sandalwood intelligence is shaping the whole visual field.

Use true material-memory logic. The work must still remember fragrant precious wood, delicate relief, carved depth, and heritage-object finish. Do not let it drift into resin fantasy, broad sculpture, or decorative CGI wood styling. The richness must come from carving, not from spectacle.

Use true spatial logic. The frame may become broader and more layered, but it must remain controlled by **object-centered close-view reading, ornamental relief rhythm, and detail-dense carved structure**. The whole image must belong to one Karnataka sandalwood-carving world.

Do not make it generic carved fantasy.

Do not make it “royal Indian décor” without sandalwood specificity.

Do not make it full realism.

Do not let dimensionality erase intimate carving logic.

Do not let the style survive only as carved surface decoration.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / CARVED WORLD]** as a **creative 2D + 3D translation** rooted in authentic **Karnataka sandalwood carving**, especially the **Mysuru fine-carving heritage**.

Treat the style as:

a precious fragrant wood-carving system,
a minute hand-carved relief language,
an intimate object tradition,
and a heritage motif-world that can expand into a richer image-space without losing carving truth.

Preserve these style-core rules:

- sandalwood identity remains primary
- minute hand-carved detail remains active
- close-view object logic stays intact
- subtractive carving intelligence remains visible
- mythology / temple / wildlife / floral vocabulary stays source-rooted
- the full frame remains inside one sandalwood-carving world

Translate the image like this:

- **[MAIN SUBJECT]** becomes a Karnataka sandalwood-derived carved object or carved presence with dense fine detail
- **[SECONDARY SUBJECTS]** also obey the same relief-carving grammar
- **[SURFACE PANELS / BORDERS / SUPPORTING ZONES]** become richer carved ornamental fields
- **[ENVIRONMENT / CONTEXT]** becomes a broader but still intimate heritage-object field shaped by carving logic rather than generic realism

Let these become richer:

- relief layering
- ornamental density
- carved depth transitions
- object-to-surface relation
- broader 2D + 3D visual coherence

Keep unchanged:

- sandalwood material truth
- intimate object reading
- minute carving intelligence
- heritage craft identity
- source-rooted motif vocabulary

Avoid:

- generic carved décor
- fantasy palace luxury

- furniture-dominant woodwork
- machine-routed symmetry
- broad sculptural mass
- one sandalwood detail inside a non-sandalwood visual world

Image-to-Image

Convert this source image into a **creative 2D + 3D Karnataka sandalwood-carving translation**, especially in the **Mysuru fine-carving heritage logic**.

Preserve the source image's main subject count, compositional hierarchy, object relations, and overall readability, but reconstruct all visible elements through **sandalwood-carving grammar**. Let the image become richer and more layered than a literal craft-object study, but keep it fully rooted in precious sandalwood material, minute hand-carved detail, intimate object logic, and dense ornamental relief.

If the source image contains figures, boxes, caskets, figurines, carved panels, or decorative forms, convert them into genuine Karnataka sandalwood-carved forms. If the source image contains mythology, temple architecture, wildlife, or floral imagery, make them feel carved into one coherent ornamental system. If the source image contains context or space, reorganize it through close-view carving intelligence rather than through generic realism.

Retain:

- sandalwood material memory
- subtractive hand-carved depth
- minute ornamental detail
- intimate object reading
- Mysuru/Karnataka heritage feeling

Allow:

- richer relief layering
- stronger compositional field
- broader carved-world coherence
- controlled 2D + 3D expansion

Do not simply add carved motifs over a normal object.

Do not make it generic luxury wood décor.

Do not make it broad sculpture.

Do not lose precious-wood intimacy.

Do not let the frame stop behaving like sandalwood carving.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from the authentic grammar of **traditional Karnataka sandalwood carving**, especially the **Mysuru fine-carving heritage tradition**. The image must feel believable, spatial, and materially convincing, but its realism must remain fully controlled by **precious sandalwood material identity, minute hand-carved detail, intimate heritage-object logic, and dense ornamental carving structure**.

Build the world from inside the craft system: fragrant Indian sandalwood, subtractive carving depth, intricate close-view detail, relief-rich ornamental compression, and a motif world of mythology, temple architecture, wildlife, and floral carving. The result should feel like Karnataka sandalwood carving has expanded into a believable reality while still remaining unmistakably carving-born.

Material logic is critical. The world must still feel like **real sandalwood**, not generic wood. Keep refined warm sandalwood tonality, fine grain behavior, delicate carved edges, and precious object presence. Do not turn it into polished resin, museum bronze, generic hardwood, or CGI luxury wood.

Form logic is critical. The carving must remain **detail-dense and intimately readable**, not broad, chunky, or purely sculptural. Even when the world gains realistic volume and space, it must still be governed by close-view carving intelligence. Relief depth, undercutting, and miniature ornamental precision must remain active.

World logic is critical. If the frame includes objects, figures, pedestals, supports, display environments, room context, or surrounding carved systems, all of them must feel organized by one Karnataka sandalwood-carving grammar. The whole frame must read as a believable dimensional world whose structure is still generated by fine carved sandalwood intelligence.

Do not make it a realistic world with carved wood accents.

Do not make it furniture-showroom realism.

Do not make it premium wood-sculpture realism.

Do not let environment overwhelm intimate object-scale logic.

Do not let any major element belong to another carving language.

Reusable Variable Template

Create **[SUBJECT / OBJECT / SCENE / WORLD]** as a **full 3D realistic dimensional world** generated from authentic **Karnataka sandalwood carving**, especially the **Mysuru fine-carving heritage**.

Treat the style as:

a precious fragrant wood-carving system,
a minute relief-carving intelligence,
an intimate heritage-object language,
and a believable reality whose volume and space are still controlled by fine sandalwood carving.

Style system that must remain unchanged:

- sandalwood material truth
- minute hand-carved detail density
- intimate object-world reading
- subtractive carving logic
- mythological / temple / wildlife / floral ornamental vocabulary
- Mysuru/Karnataka heritage identity
- full-frame coherence inside one sandalwood-carving world

Translate the scene like this:

- **[MAIN SUBJECT]** becomes a fully dimensional Karnataka sandalwood-derived carved form whose structure remains carving-born
- **[SECONDARY SUBJECTS]** become dimensional but still obey the same fine-carving logic
- **[OBJECTS / PANELS / SUPPORTS / SURFACES]** become tactile heritage carving-world elements
- **[ENVIRONMENT]** becomes a believable spatial field organized by intimate object logic, relief density, and carved ornamental structure

Increase:

- believable volume
- light on carved wood surfaces
- relief depth
- environmental completion
- full-frame coherence
- carved-world realism

Do not lose:

- sandalwood specificity
- minute detail density
- intimate object reading
- subtractive carving truth
- heritage motif vocabulary
- Mysuru/Karnataka identity

Avoid:

- generic carved wood realism

- showroom luxury furniture logic
- broad sculpture-first massing
- machine-made finish
- carved accents added later
- any non-sandalwood carving system taking over the frame

Image-to-Image

Convert this source image into a **full 3D realistic Karnataka sandalwood-carving world**, especially in the **Mysuru fine-carving heritage logic**.

Preserve the source image's main subject count, object hierarchy, compositional order, and readable structure, but rebuild the entire image through **sandalwood-carving grammar**. Convert ordinary materials into believable Indian sandalwood. Convert ordinary surfaces into minute hand-carved ornamental relief. Convert generic visual structure into a dimensional world shaped by intimate object logic and fine carving intelligence.

If the source image contains objects, figurines, panels, boxes, caskets, temple forms, floral fields, wildlife motifs, or decorative structures, transform them into Karnataka sandalwood-carved forms with dense hand-resolved detail. If the source image includes surrounding space, supports, or environment, rebuild them so the full frame still feels born from one coherent sandalwood-carving world rather than from normal realism.

Retain:

- precious sandalwood material memory
- minute carving intelligence
- intimate heritage-object scale logic
- subtractive relief depth
- motif-rich ornamental compression
- Mysuru/Karnataka source identity

Increase:

- dimensional realism
- material depth
- spatial completion
- light-material interaction
- full-frame carved-world coherence

Do not paste carved ornament over a normal scene.

Do not turn it into generic luxury wood realism.

Do not let realism erase close-view detail density.

Do not let the frame stop feeling like sandalwood carving.

Do not allow one major element to remain outside the Karnataka sandalwood system.
