

Sawantwadi woodcraft - Maharashtra

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual grammar of traditional Sawantwadi woodcraft from Maharashtra. Do not treat this as generic wooden toys, generic folk craft, generic souvenir objects, or a normal world with wood texture and bright paint added later. Build the entire image as if it is generated by a hand-carved miniature object-world where toy logic, set logic, painted type-clarity, and close-range tactile wooden presence control every decision.

The image must obey Sawantwadi woodcraft rules:

- the world is built from miniature object logic, not realism-first scene logic
- forms are hand-carved, simplified, rounded or clearly shaped for immediate recognition
- objects read as toy-types and miniatures rather than realistic sculptures
- paint clarifies carved identity rather than replacing form
- object families belong together as if they come from one Bhatukli / fruit / doll / animal / domestic miniature universe
- the world feels arranged, handled, close-range, and set-like

Translate the full world through this branch:

- shape must become compact, graspable, simplified, and toy-readable
- form must become hand-carved and compressed rather than realism-modeled
- space must become miniature arrangement space rather than cinematic perspective space
- light must reveal carved volume, painted surfaces, and tactile wooden objecthood
- shadow must support grounding and object separation, not heavy realism
- value must stay clean, clear, and child-readable
- movement must feel like toy-world balance, placed stillness, playful posed clarity, and handled miniature physics
- environment must obey the same logic: trees, utensils, houses, animals, carts, platforms, and empty intervals must all feel like members of one hand-carved miniature set

Material memory should stay visible:

Pangara-wood logic, hand carving, smooth toy-volume, bright painted finish, and handcrafted object presence.

Avoid:

generic wooden toy catalog styling, Montessori toy language, nursery-product aesthetics, realism-first sculpture, decorative paint on generic forms, normal environment with only the objects translated, texture-only transformation.

The final result must feel like a true Sawantwadi woodcraft world: miniature, hand-carved, vividly painted, arranged, tactile, playful, domestic-cultural, and fully translated in shape, form, space, light, hierarchy, and environment.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of traditional Sawantwadi woodcraft from Maharashtra.

Core style system to preserve:

- miniature object-world logic
- hand-carved simplification
- painted type-clarity
- tactile graspable toy-volume
- set-based family coherence
- close-range arrangement space
- playful domestic / cultural miniature intelligence
- whole-frame consistency under one Sawantwadi toy-world system

Translate the scene like this:

- [MAIN SUBJECT] becomes a hand-carved miniature toy/object form rather than a realism-first figure
- [SECONDARY SUBJECTS] obey the same toy-family logic and belong to the same set-world
- [OBJECTS / PROPS] become simplified, arranged, readable miniature forms
- [ENVIRONMENT / BACKGROUND] becomes a compact hand-arranged world: set-like, close-range, carved-compatible, paint-readable
- [LIGHT / SHADOW] become object-revealing and separation-friendly rather than cinematic
- [MOVEMENT / ACTION] becomes playful posed clarity, handled-object balance, and miniature physics instead of realistic motion
- [SPACE / DEPTH] becomes clustered arrangement space rather than open scenic perspective

Keep:

miniature readability, carved simplification, bright clarifying paint, tactile toy-object presence, object-family coherence, Sawantwadi recognizability.

Avoid:

generic wooden toy design, decorative folk object styling, realism-first carving, paint-only transformation, normal environment with a few toy props, souvenir-shop look.

The final result must feel like the whole world was generated by Sawantwadi woodcraft logic.

Image-to-Image

Convert this source image into an authentic Sawantwadi woodcraft world from Maharashtra.

Preserve the source image's subject count, main action, core relationships, and readability, but rebuild the entire image through Sawantwadi miniature object-world logic. Do not simply add wood grain, glossy paint, or toy-like color. Reconstruct the full image so that shape, form, space, light, shadow, movement, hierarchy, and environment all obey hand-carved miniature set logic.

The transformed image must become:

- miniature rather than full-scale in world logic
- carved and simplified rather than realism-modeled
- paint-clarified rather than surface-decorated
- arranged and clustered rather than scenic and open
- tactile and graspable rather than sculptural and monumental
- unified across figures, props, architecture, utensils, trees, animals, and background forms

Do not allow only the objects to become Sawantwadi while the environment stays generic.

Do not let paint do all the work while form remains ordinary.

Do not turn the image into generic cute toy styling.

The final result must feel like the source image has been rebuilt by Sawantwadi woodcraft, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D visual world rooted in the traditional Sawantwadi woodcraft grammar of Maharashtra. This must not become generic cute toy fantasy, decorative painted-wood illustration, or a normal scene with toy styling added later. It should feel like authentic Sawantwadi miniature object logic has expanded into a richer stylized world while remaining fully controlled by hand-carved simplification, set-family coherence, and miniature arrangement intelligence.

Keep the deep structure unchanged:

- miniature object-world remains primary
- hand-carved simplification remains visible
- painted clarity remains subordinate to carved form
- object families still feel arranged as one coherent set
- close-range play/domestic world logic remains active
- environment must still feel miniaturized and hand-arranged

Now let the world become richer:

- object clusters can become more compositionally expressive
- carved toy-volumes can gain richer 2D + 3D interplay without losing simplification
- environment can become more elaborate while remaining miniature-set based

- domestic, animal, fruit, and symbolic object families can interrelate more strongly
- light can become more expressive while still revealing carved-object logic
- space can deepen slightly but must remain arranged and compact, not cinematic

Translate everything:

shape, form, space, light, shadow, value, movement, hierarchy, and environment must all be rebuilt through Sawantwadi woodcraft logic.

Avoid:

generic stylized toy fantasy, souvenir-folk art worlds, cute nursery aesthetics, realism-first miniature scenes, material-only wooden texture treatment, normal environment with toy props inserted.

The final result must feel like Sawantwadi woodcraft itself has generated a richer stylized universe.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in traditional Sawantwadi woodcraft from Maharashtra.

Preserve these style-core rules:

- miniature object-world logic remains primary
- hand-carved simplification stays visible
- painted type-clarity still serves carved form
- set-family coherence remains active
- environment remains arranged, compact, and close-range
- the whole frame obeys one Sawantwadi miniature system

Translate the scene like this:

- [MAIN SUBJECT] becomes a stylized hand-carved miniature presence rather than a realism-first figure
- [SECONDARY SUBJECTS] become related members of the same toy/object family
- [OBJECTS / PROPS] become simplified, clustered, paint-readable miniature forms
- [ENVIRONMENT] becomes a richer but still hand-arranged miniature world
- [LIGHT / SHADOW] become more expressive while remaining object-revealing
- [SPACE / DEPTH] become slightly richer but still set-like and close-range
- [MOVEMENT / ACTION] become playful posed logic and miniature-world balance rather than realistic action

Keep:

miniature readability, carved simplification, toy-volume, set-family logic, Sawantwadi recognizability.

Avoid:

cute fantasy toy worlds, generic painted folk illustration, realism-first miniatures, decorative wood styling, only the objects translated while the world stays generic.

The final result must feel like the world was redesigned by Sawantwadi woodcraft.

Image-to-Image

Convert this source image into a creative 2D + 3D Sawantwadi woodcraft world from Maharashtra.

Preserve the source image's main action, relationships, and readability, but reconstruct the entire image through Sawantwadi miniature object logic. Do not stop at adding painted wood or toy-like color. Rebuild shape, form, space, light, shadow, movement, hierarchy, and environment so the image behaves like an expanded hand-carved miniature set-world.

The transformed image must become:

- miniature and arranged rather than scenic
- carved and simplified rather than realism-based
- paint-clarified rather than merely colorful
- richer in toy-world clustering and family relations
- unified across subject, props, animals, houses, utensils, and ground forms

Do not allow only the toys to become Sawantwadi.

Do not let the environment remain ordinary.

Do not let paint replace carved logic.

The final result must feel like Sawantwadi woodcraft has expanded into a living stylized world.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the traditional Sawantwadi woodcraft grammar of Maharashtra. This must not become ordinary realism with a few painted wooden toys inserted later. It must feel like the entire world has become real under Sawantwadi miniature object-world law: hand-carved simplification, toy-family coherence, painted type-clarity, miniature arrangement logic, tactile wooden volume, and set-based domestic/play intelligence controlling everything.

Translate the full style into dimensional reality:

- shape must remain miniature, simplified, and toy-readable
- form must remain hand-carved and compressed rather than realism-sculpted
- space must remain arranged, close-range, and set-like rather than open scenic realism

- light must reveal carved wooden volume, painted surfaces, and toy tactility
- shadow must support object separation and miniature grounding
- value must remain clear and child-readable
- movement must feel like believable miniature object physics and arranged toy-world stillness
- environment must inherit the same hand-carved miniature logic: houses, trees, utensils, carts, animals, platforms, and background forms must all belong to one Sawantwadi world

Keep realism under branch control:

believable Pangara-wood object presence, convincing carved volume, realistic paint on wood, and miniature arrangement coherence without drifting into generic realistic toy photography.

Avoid:

generic realistic wooden toys, nursery-product realism, souvenir-object display, realism-first carving, normal rooms or landscapes with Sawantwadi props, paint-and-wood texture-only conversion.

The final result must feel like Sawantwadi woodcraft itself became dimensional reality.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the traditional Sawantwadi woodcraft system of Maharashtra.

Style system that must remain unchanged:

- miniature object-world logic
- hand-carved simplification
- painted type-clarity
- tactile toy-volume
- set-family coherence
- arranged close-range environment
- full-world consistency under Sawantwadi miniature rules

Translate the scene like this:

- [MAIN SUBJECT] becomes a dimensional but still hand-carved miniature presence
- [SECONDARY SUBJECTS] remain members of the same object-family world
- [OBJECTS / PROPS] become believable but still simplified toy-scale forms
- [ENVIRONMENT] becomes a real miniature set-world organized by arrangement, grouping, and toy logic
- [LIGHT / SHADOW] become realistic but still object-revealing and miniature-friendly
- [SPACE / DEPTH] become dimensional without turning into open scenic realism
- [MOVEMENT / PHYSICS] become believable toy-world balance, placement, and miniature motion

Increase:

carved volume realism, wood-paint material conviction, object tactility, set-space completion, family coherence.

Do not lose:

Sawantwadi recognizability, miniature logic, carved simplification, paint under form control, arranged set intelligence.

Avoid:

generic realistic wooden toy worlds, nursery styling, realism-first sculpture, only the objects translated while the environment stays generic.

The final result must feel like a real Sawantwadi woodcraft world.

Image-to-Image

Convert this source image into a full 3D realistic Sawantwadi woodcraft world from Maharashtra.

Preserve the source image's subject count, action, and readability, but rebuild the full image through Sawantwadi miniature set logic. Do not merely add realistic painted wood objects. Reconstruct shape, form, space, light, shadow, movement, grouping, and environment so the entire scene behaves like a dimensional hand-carved miniature object-world.

The transformed image must become:

- miniature in world logic
- carved rather than realism-sculpted
- arranged rather than scenic
- paint-clarified rather than surface-decorated
- unified across figures, fruits, utensils, animals, houses, carts, and ground forms

Do not let realism erase the branch.

Do not let only the objects become Sawantwadi.

Do not leave the rest of the world generic.

The final result must feel like Sawantwadi woodcraft itself has become real.
