

Togalu Gombeyaata - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create an image or performance scene in the authentic source-faithful visual logic of **Togalu Gombeyaata from Karnataka**, treating it as a **leather shadow-puppetry system**, not as generic puppetry, not as decorative leather craft, and not as static mythological silhouette art.

Build the full scene as if it belongs to a real **Karnataka shadow-puppet performance**. The main visual system must come from:

- **treated translucent leather puppets**
- **painted hide surfaces**
- **articulated heads and limbs**
- **screen-and-light projection**
- **epic-character performance**
- **folk-stage setup**

The puppet must feel like it is made from **transparent or translucent treated hide**, not opaque cardboard, not carved wood, and not cloth. The figure should feel cut from leather, painted in strong theatrical colors, and engineered for movement. Heads and limbs should feel joined and movable, not frozen in one rigid body.

The stage must include:

- **a white semi-transparent cloth screen**
- **a backlight or lamp placed behind the puppets**
- a clear relation between puppet, screen, and projected image
- a folk-performance atmosphere rather than museum display

The figure world should come from:

- **Ramayana**
- **Mahabharata**
- mythological and epic characters
- human and animal puppet figures
- live dramatic enactment rather than static devotional display

The puppet must work in two visual modes at once:

- as a **painted leather object**
- as a **projected shadow or luminous silhouette on screen**

Whole-frame rule: if the image includes puppet body, painted hide, articulated joints, rods or strings, screen, lamp, shadow image, and epic-role identity, all of them must belong to one **Togalu Gombeyaata grammar**. The style must not stop at “shadow theatre mood.” Material, movement, projection, and performance system must all become Togalu Gombeyaata.

Do not generate:

- generic puppets
- opaque decorative leather cutouts
- static leather wall art
- screenless puppet display
- generic mythology illustration with silhouette effects
- stage imagery with no leather-shadow logic
- decorative leather craft with no articulated performance identity

The final result must feel like a **true Togalu Gombeyaata performance: translucent painted leather figures, articulated movement, backlit screen projection, and epic-theatrical storytelling in a Karnataka folk-stage environment.**

Reusable Variable Template

Create **[CHARACTER / SCENE / PERFORMANCE MOMENT]** in the authentic source-faithful visual logic of **Togalu Gombeyaata from Karnataka**, treating it as a **leather shadow-puppetry performance system**.

Core style system to preserve:

- shadow-screen identity
- translucent treated leather body
- articulated movement system
- painted leather surface
- backlight projection
- epic-character performance world
- folk-stage ecology
- whole-system coherence

Translate the scene like this:

- **[PUPPET BODY]** becomes a true translucent leather puppet
- **[HEAD / LIMBS / JOINTS]** become visibly articulated and performance-ready
- **[COLOR SYSTEM]** becomes painted hide, readable both as leather object and projected image
- **[SCREEN / LIGHT]** becomes a real shadow-projection setup
- **[EPIC ROLE / SCENE]** becomes clearly legible as dramatic puppet performance
- **[FULL FRAME]** must read as one Togalu Gombeyaata system

Keep:

- screen first
- backlight first
- leather first
- articulation first
- performance first
- epic-role clarity
- whole-frame coherence

Avoid:

- generic puppetry
- decorative leather craft
- static silhouette illustration
- object-display logic
- opaque material behavior
- stage mood without true shadow-puppet structure

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Togalu Gombeyaata from Karnataka**.

Preserve the source image's main character count, broad action readability, and overall dramatic identity, but rebuild the full image through **treated translucent leather, painted puppet surfaces, articulated heads and limbs, semi-transparent screen, backlight projection, and epic-performance staging**. Replace any generic puppetry, decorative leather art, static silhouette imagery, or stage illustration with a true **Togalu Gombeyaata** system.

If the source contains mythological characters, rebuild them as leather shadow-puppets. If it contains a stage, rebuild it as a screen-based folk-theatre setup. If it contains a silhouette, make that silhouette come from backlit leather puppets rather than graphic design. If it contains costume and gesture, simplify them into puppet-readable articulated performance shapes.

Do not simply add a shadow effect to the source image. Do not keep another visual language underneath. Rebuild the full scene so **leather, articulation, screen, light, shadow, and epic role-performance all become one authentic Togalu Gombeyaata system**.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D translation** of **Togalu Gombeyaata from Karnataka**. This is not generic “shadow puppet style,” not leather texture transfer, and not simply making a mythological figure into a silhouette. It should feel like the full **Togalu Gombeyaata grammar** has begun to reorganize the image more powerfully while still remaining unmistakably rooted in **translucent leather, articulated joints, backlit screen projection, and epic shadow performance**. The source anchor remains the real Karnataka performance system of treated hide, painted color, joined limbs, semi-transparent screen, and lamp projection.

Let the puppet stop behaving like a decorative object and start behaving like a **performance-engineered shadow figure**. Let the silhouette become more compositionally forceful. Let the articulation become more visually expressive. Let the relation between painted leather and projected image become more integrated. Let the full scene feel authored by **screen, light, movement, and epic-theatrical interaction**.

This version must transform more than surface. Change:

- the **leather-body logic** so the figure feels more transparently performance-made
- the **joint logic** so motion-readability becomes more structurally active
- the **silhouette logic** so projected shape becomes compositionally decisive
- the **screen relation** so the puppet and projected image belong to one system
- the **light logic** so backlight becomes an active image-making force
- the **scene logic** so epic action becomes truly puppet-theatrical

Keep the source truth intact:

- leather remains translucent
- the puppet remains articulated
- the screen remains real
- backlight remains active
- epic-role readability remains strong
- the scene remains folk-shadow-theatre, not decorative design

Do not generate:

- graphic silhouette styling
- decorative leather-object fantasy
- generic shadow theatre mood
- screenless leather puppet illustration
- mythological leather cutwork with no articulated performance logic
- object display with shadow effects only

The final result must feel like **Togalu Gombeyaata grammar has reauthored the image through translucent leather, articulated motion, screen-space composition, backlight projection, and epic-performance staging.**

Reusable Variable Template

Create **[CHARACTER / SCENE / PERFORMANCE MOMENT]** as a **creative 2D + 3D translation of Togalu Gombeyaata from Karnataka.**

Preserve these style-core rules:

- shadow-screen identity remains primary
- translucent leather remains structural
- articulation remains active
- epic-performance world remains readable
- puppet and projection remain linked
- the full image must be rebuilt through Togalu Gombeyaata grammar

Translate the scene like this:

- **[PUPPET BODY]** becomes a stronger translucent leather performance figure
- **[HEAD / LIMBS / JOINTS]** become more compositionally expressive and movement-ready
- **[SCREEN / PROJECTED IMAGE]** become more tightly integrated
- **[LIGHT SOURCE]** becomes more visibly responsible for the image event
- **[EPIC ROLE / SCENE]** becomes more theatrically staged
- **[FULL FRAME]** must feel reauthored by Karnataka leather-shadow performance logic

Mandatory transformation rule:

Do not transfer only leather texture, color, or silhouette.

Also transform:

- puppet engineering
- movement-readability
- screen relation
- backlight relation
- scene interaction
- performance logic
- whole-frame coherence

Let these become richer:

- leather transparency
- joint expression
- silhouette strength

- screen composition
- backlight drama
- epic-performance clarity

Keep unchanged:

- shadow first
- leather first
- articulation first
- screen first
- epic role first
- whole-system coherence

Avoid:

- decorative leather illustration
- static silhouette art
- generic puppet mood
- object-display logic
- non-projective theatre styling

Image-to-Image

Convert this source image into a **creative 2D + 3D Togalu Gombeyaata world from Karnataka**.

Preserve the source image's main character count, broad action structure, and dramatic readability, but rebuild the full scene through **translucent treated leather, painted puppet surfaces, articulated movement, screen-and-light projection, and epic-theatrical performance logic**. Let the scene become more compositionally transformed than a literal puppet reference while staying fully rooted in Togalu Gombeyaata grammar.

Rebuild the puppet so it behaves like a true leather shadow-figure. Rebuild the joints so they support readable performance motion. Rebuild the screen so it becomes a real image-field. Rebuild the light so it becomes the source of the visual event. Rebuild the epic role so it becomes scene-based puppet theatre rather than static mythology.

Do not just apply leather texture and shadow to the source image. Do not keep another performance language underneath. Rebuild the full scene so **leather, articulation, screen, backlight, silhouette, and epic enactment all become one Togalu Gombeyaata system**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from **Togalu Gombeyaata from Karnataka**. This is not a realistic puppet with shadow effects added later. It is a believable world in which **translucent treated leather, articulated joints, painted hide, white projection screen, backlight lamp, and epic-performance staging** govern every visible element. The real anchor remains the Karnataka leather shadow-puppet system described by the Bayalata Academy.

Translate the full style-system into reality. Every part of the scene must adapt:

- the puppet body must behave like real translucent treated hide
- the painted surface must behave like real dyed leather
- the joints must behave like actual puppet articulation
- the rods or strings must behave like performance controls
- the screen must behave like a real semi-transparent projection surface
- the backlight must behave like the true source of the visual event
- the epic scene must behave like enacted folk theatre, not static display

This version must not stop at realistic texture. It must rebuild:

- **material logic** so leather translucency remains structurally believable
- **movement logic** so joints and puppet engineering remain active
- **screen logic** so the projection field remains central
- **light logic** so the image is genuinely backlit
- **performance logic** so the scene reads as enacted theatre
- **whole-system coherence** so puppet, screen, light, and epic-role world all belong together

If the image contains mythological characters, they must still remain true leather puppets rather than realistic actors. If it contains a stage, it must remain a folk shadow-theatre stage rather than generic drama staging. The final result must still feel like Togalu Gombeyaata, not generic realistic puppetry.

Do not generate:

- realistic decorative leather objects
- generic puppet-stage realism
- static mythological leather display
- silhouette theatre with no real puppet engineering
- lamp-lit scene with no true projection system
- realism that erases shadow-puppet identity

The final image must feel like **a real Togalu Gombeyaata world where translucent leather, articulated motion, screen projection, backlight, and epic puppet performance have become materially and spatially believable reality.**

Reusable Variable Template

Create **[CHARACTER / SCENE / PERFORMANCE MOMENT]** as a **full 3D realistic dimensional world** generated from **Togalu Gombeyaata from Karnataka**.

Style system that must remain unchanged:

- shadow-screen identity remains primary
- translucent leather body remains active
- articulation remains structurally visible
- painted hide remains real
- screen-and-backlight remain central
- epic-performance world remains readable
- the entire frame must be rebuilt through one Togalu Gombeyaata grammar

Translate the scene like this:

- **[PUPPET BODY]** becomes a believable treated translucent leather figure
- **[HEAD / LIMBS / JOINTS]** become physically convincing performance articulations
- **[SCREEN]** becomes a real semi-transparent projection field
- **[BACKLIGHT / LAMP]** becomes the true image source
- **[EPIC ROLE / SCENE]** becomes a believable enacted puppet-theatre moment
- **[FULL ENVIRONMENT]** becomes a coherent Karnataka leather-shadow-performance world

Increase:

- leather tactility
- translucency realism
- joint realism
- screen projection realism
- performance-space clarity
- whole-system coherence

Do not lose:

- shadow first
- leather first
- articulation first
- screen first
- epic-performance identity
- whole-frame unity

Avoid:

- realistic decorative leather craft

- generic theatre realism
- static puppet display
- silhouette styling without puppet engineering
- non-projective stage imagery

Image-to-Image

Convert this source image into a **full 3D realistic Togalu Gombeyaata world from Karnataka**.

Preserve the source image's main character count, dramatic readability, and broad scene structure, but rebuild every visible element through **treated translucent leather, painted puppet surfaces, articulated joints, rods or strings, semi-transparent screen, backlight projection, and epic-performance logic**. Replace generic puppetry, decorative leather styling, static silhouette design, or general stage realism with a full Togalu Gombeyaata system.

Rebuild the body so it becomes real translucent leather. Rebuild the joints so they support believable puppet motion. Rebuild the screen so it becomes the real image-field. Rebuild the backlight so it genuinely creates the visual event. Rebuild the epic role so it becomes enacted shadow performance. Rebuild the whole space so no part remains generic.

Do not simply add realistic texture to a puppet image. Do not keep the original performance language underneath. Rebuild the full scene so **leather, articulation, screen, backlight, projection, and epic enactment all become one believable Togalu Gombeyaata reality**.
