

Warrior,merit shawl branch-Nagaland

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the authentic warrior / merit shawl world of Nagaland. Do not treat this as generic tribal prestige cloth, generic red-black ethnic fabric, or a normal world with a dramatic shawl added later. Build the entire image as if it is generated by an earned honor-cloth system where public readability, restricted status, segmented woven field architecture, and body-worn declaration control every decision.

The image must obey this branch law:

- the world is generated from honor-coded field order, not from decorative pattern
- strong bands, median zones, stripe blocks, geometric divisions, and high public legibility remain primary
- the cloth must feel earned, entitled, and socially specific rather than broadly available
- body presence must behave like ceremonial declaration, not casual drape
- every major form must feel governed by authority, distinction, and woven status structure
- the world must feel publicly readable at a distance

Translate the full world through this merit-shawl system:

- shape must become segmented, declarative, rank-bearing, and field-organized
- form must become cloth-law-driven rather than fashion-driven
- space must become ceremonial display space rather than ordinary scenic space
- light must preserve woven contrast, field hierarchy, and social readability
- shadow must reinforce authority bands and body-borne cloth structure without obscuring them
- value must remain bold and organizational
- movement must feel like body-worn declaration, ceremonial bearing, and status visibility
- environment must also obey honor-cloth law: characters, animals, props, architecture, mountains, trees, and ground must all feel governed by segmented authority fields, strong contrast zones, and public ceremonial order

Keep the branch source-rooted:

earned shawl logic, woven geometric field order, strong public readability, tribe-bound status coding, and handloom body-cloth discipline.

Avoid:

generic warrior fantasy, luxury tribal textile styling, decorative bold cloth, generic heroic costume, ordinary realism with one prestige shawl inserted, and surface-only pattern translation.

The final result must feel like a true Nagaland warrior / merit shawl world: earned, public, segmented, woven, socially coded, and fully translated across the whole frame.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of a Nagaland warrior / merit shawl world.

Core style system to preserve:

- earned honor-cloth architecture
- segmented woven field order
- public ceremonial readability
- body-worn declaration
- strong geometric hierarchy
- handloom-built status code
- whole-frame coherence under one merit-shawl law

Translate the scene like this:

- [MAIN SUBJECT] becomes governed by authority-bearing field logic rather than generic realism
- [SECONDARY SUBJECTS] obey the same honor-coded geometric order
- [OBJECTS / PROPS] become status-structured, segmented, declarative, and publicly legible
- [ANIMALS / TREES / LANDSCAPE / ARCHITECTURE] become shaped by strong field blocks, woven divisions, ceremonial contrast, and rank-bearing order
- [ENVIRONMENT / BACKGROUND] becomes a world of public distinction, geometric authority, and status-readable segmentation
- [LIGHT / SHADOW] preserve honor-field clarity rather than atmospheric softness
- [SPACE / DEPTH] become ceremonial and display-oriented rather than ordinary scenic depth
- [MOVEMENT / ACTION] become ceremonial bearing, declaration, and structured visibility

Keep:

earned cloth authority, status readability, geometric order, woven field hierarchy, ceremonial body presence.

Avoid:

generic prestige textile, warrior-costume fantasy, decorative geometry, normal realism with one elite shawl, and purely surface-level ethnic styling.

The final result must feel like the whole world was generated by Nagaland warrior / merit shawl law.

Image-to-Image

Convert this source image into an authentic Nagaland warrior / merit shawl world.

Preserve the source image's subject count, core action, main relationships, and scene readability, but rebuild the entire image through earned honor-cloth logic. Do not simply add a bold woven shawl or high-contrast tribal pattern. Reconstruct all visible forms so that shape, form, space, light, shadow, value, movement, and environment obey segmented ceremonial field architecture.

The transformed image must become:

- honor-coded rather than merely decorated
- socially restricted in feeling rather than broadly available
- woven and declarative rather than ornamental
- body-borne and public rather than private and casual
- hierarchically segmented rather than generically patterned
- unified across figures, props, animals, architecture, terrain, and background

Do not let only the shawl become branch-correct while the rest of the frame stays generic.

Do not let dramatic pattern replace earned structure.

Do not let realism erase ceremonial public readability.

The final result must feel like the source image has been rebuilt by a warrior / merit shawl civilization, not decorated with elite textile motifs.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image world rooted in the warrior / merit shawl grammar of Nagaland. This must not become generic tribal hero fantasy, a normal stylized world with one prestige shawl, or decorative strong-geometry styling. It should feel like authentic earned honor-cloth logic has expanded into a broader world where characters, animals, architecture, mountains, props, sky divisions, and environment are all rebuilt through ceremonial authority-field law.

Keep the deep structure unchanged:

- earned status remains primary
- segmented woven geometry remains structural
- public readability remains stronger than decorative richness
- body-worn declaration remains central
- handloom field order remains source-rooted
- the whole frame remains generated by merit-shawl law

Now let the world become richer:

- characters can be built from authority-bearing bands, blocks, and segmented honor geometry
- animals can inherit ceremonial rank structure and woven public clarity
- architecture can behave like monumental field divisions and status-bearing geometric order
- mountains, trees, ground, and sky can become organized by bold ceremonial segmentation
- shadows can deepen to reinforce rank hierarchy rather than generic mood
- space can become a world of public authority and structured visibility rather than ordinary landscape

Translate everything:

color, shape, line, form, light, shadow, volume, depth, character, animal, object, architecture, environment, and total scene behavior must all be rebuilt through earned honor-cloth grammar.

Avoid:

generic warrior fantasy, costume spectacle, decorative textile spread, high-contrast tribal mood, and ordinary stylized worlds with prestige fabric inserted.

The final result must feel like the warrior / merit shawl branch itself has generated an imaginative unified 2D + 3D world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the warrior / merit shawl world of Nagaland.

Preserve these style-core rules:

- earned honor law remains primary
- segmented field order remains structural
- ceremonial public readability remains central
- body-borne declaration remains visible
- handloom status geometry remains source-rooted
- the whole frame remains generated by merit-shawl law

Translate the scene like this:

- [MAIN SUBJECT] becomes a figure built from authority-bearing segmented field logic rather than generic realism
- [SECONDARY SUBJECTS] obey the same honor-coded geometry
- [ANIMALS / OBJECTS / PROPS] become status-bearing forms with declarative bands, blocks, and ceremonial readability
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / SKY / BACKGROUND] become organized through bold segmented authority fields and public order
- [ENVIRONMENT] becomes a ceremonial world of distinction, hierarchy, and visible honor structure
- [LIGHT / SHADOW] reveal segmented status order rather than generic atmosphere

- [SPACE / DEPTH] become display-space and authority-space rather than ordinary scenic depth
- [MOVEMENT / ACTION] become ceremonial bearing, declaration, and public visibility

Keep:

earned distinction, segmented order, public readability, woven field hierarchy, ceremonial force.

Avoid:

generic tribal hero design, costume fantasy, decorative geometric styling, ordinary stylized worlds, and prop-only prestige cloth conversion.

The final result must feel like the world was redesigned by Nagaland warrior / merit shawl intelligence.

Image-to-Image

Convert this source image into a creative 2D + 3D Nagaland warrior / merit shawl world.

Preserve the source image's core action, readable relationships, and main scene meaning, but rebuild every visible element through earned honor-cloth logic. Do not stop at adding bold bands or prestige shawl motifs. Reconstruct shape, form, light, shadow, volume, depth, character design, environment, and spatial behavior so the whole image behaves like a world generated by ceremonial status-field law.

The transformed image must become:

- honor-structured rather than costume-styled
- public and rank-readable rather than decorative
- segmented and woven rather than merely patterned
- ceremonially declarative rather than casually ethnic
- unified across people, animals, props, landforms, architecture, and background

Do not let only selected garments become branch-correct.

Do not let the environment remain generic.

Do not let bold pattern replace earned social law.

The final result must feel like Nagaland warrior / merit shawl culture has expanded into a full imaginative world-state.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the warrior / merit shawl grammar of Nagaland. This must not become ordinary realism with a prestige shawl added later. It must feel like the entire world has become real under earned honor-cloth law: segmented ceremonial field order, public status readability, body-worn declaration, and handloom authority geometry controlling every visible element.

Translate the full style into dimensional reality:

- shape must remain authority-bearing, segmented, and rank-readable
- form must remain woven-field-governed rather than costume-realism-governed
- color must remain under ceremonial signal law
- light must preserve public readability of field hierarchy
- shadow must reinforce status structure rather than obscure it
- volume must behave like real body-borne ceremonial cloth and authority-marked world form
- depth must be built through visible hierarchy and structured display-space rather than generic scenic realism
- characters, animals, props, architecture, terrain, and all environmental structures must feel generated through merit-shawl law, not merely styled by it

Keep realism under branch control:

believable cloth weight, real body presence, visible status order, ceremonial posture, public legibility, and total honor-world coherence.

Avoid:

ordinary realism with elite shawls, tribal warrior costume realism, prestige-fabric glamour, generic heroic worlds, and prop-only merit-cloth accents.

The final result must feel like the Nagaland warrior / merit shawl branch itself has become a believable living world.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the warrior / merit shawl grammar of Nagaland.

Style system that must remain unchanged:

- earned honor law
- segmented ceremonial field structure
- public status readability
- body-worn declaration
- handloom authority geometry
- whole-frame merit-shawl coherence

Translate the scene like this:

- [MAIN SUBJECT] becomes a fully dimensional figure built from rank-bearing field order and ceremonial body-cloth authority

- [SECONDARY SUBJECTS] obey the same visible honor structure
- [ANIMALS / OBJECTS / PROPS] become believable forms governed by segmented public authority law
- [ARCHITECTURE / MOUNTAINS / TREES / GROUND / BACKGROUND] become real spatial forms organized by visible hierarchy and ceremonial field order
- [LIGHT / SHADOW] become realistic but still status-structure-revealing
- [SPACE / DEPTH] become believable display-space and rank-space rather than generic realism-space
- [MOVEMENT / PHYSICS] become real ceremonial bearing, public visibility, and honor-world interaction

Increase:

cloth realism, bodily authority, structural depth, world completion, public legibility, honor-world integration.

Do not lose:

earned distinction, segmented order, ceremonial declaration, woven status law, branch-born coherence.

Avoid:

normal realism with prestige shawls, warrior-costume realism, glamourized elite fabric, and ordinary worlds with one honor cloth.

The final result must feel like a real Nagaland warrior / merit shawl world.

Image-to-Image

Convert this source image into a full 3D realistic Nagaland warrior / merit shawl world.

Preserve the source image's subject count, readable action, and main relationships, but rebuild all visible forms through earned honor-cloth logic. Replace ordinary realism with segmented ceremonial field order, public authority, body-borne declaration, and status-readable world behavior.

The transformed image must become:

- honor-generated rather than costume-decorated
- public and rank-readable rather than merely dramatic
- woven-field-governed rather than generic realism-led
- real in volume but still controlled by ceremonial merit law
- unified across figures, animals, props, architecture, terrain, and environment

Do not let only selected garments become branch-correct.

Do not let realism take over.

Do not leave the rest of the world generic.

The final result must feel like the Nagaland warrior / merit shawl world has become believable reality.
