

Garó weaving - Meghalaya

V1 — Authentic Style

Universal Hard Prompt

Create an image in the pure authentic source-truth visual logic of carpet / wool systems from Sikkim.

Treat this as a real Sikkim wool-carpet and furnishing-surface system, not as generic Himalayan rug décor, not as Tibetan carpet mood, not as blanket or shawl logic, not as flatwoven durrie logic, and not as a realistic room with one symbolic carpet added later.

Build the entire image as if it comes from true Sikkim carpet intelligence:

carpet-object identity,
cotton support structure,
wool-built furnishing surface,
graph-planned symbolic design order,
motifs such as mythical birds, lotus flowers, snow lions, medallion forms, and Buddhist lucky signs,
beating-and-compaction process memory,
leveling and scissoring finish,
and furnishing-world use for walls, chairs, sofas, beds, and diwans.

The style must control the whole frame:

object construction,
surface body,
motif order,
edge behavior,
wool density,
finish logic,
furnishing placement,
figure grouping if present,
background structure,
and same-language world control.

If figures appear, do not build them as normal realistic humans first.

Build them as carpet-born presences:

motif-aware,
surface-aware,
object-aware,
non-photoreal in logic,
and shaped by Sikkim carpet grammar rather than by realism-first anatomy.

Do not treat the branch like generic rug styling.

Do not soften it into blanket behavior.
Do not flatten it into durrie behavior.
Do not reduce it to wool texture with Buddhist motifs pasted on top.
Do not let generic realism sit underneath the style.

The world must still feel like Sikkim carpet / wool systems:
constructed carpet-object,
wool-built symbolic furnishing surface,
graph-planned order,
hand-finished presence,
and Sikkim-specific furnishing-world logic.

Preserve true branch identity:
carpet-first,
wool-surface-first,
graph-order-first,
furnishing-object-first,
hand-finished construction,
and same-language world logic.

Do not make it:
generic ethnic rug,
generic Tibetan carpet,
bohemian interior décor,
blanket softness,
plain wool cloth,
durrie-like flatspread,
or realism with a symbolic carpet used as local flavor.

The final image must feel like the original Sikkim carpet system itself made this image.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in the pure authentic source-truth visual logic of carpet / wool systems from Sikkim.

Treat the style as a wool-carpet and furnishing-surface system built from:
carpet-object identity,
cotton support structure,
wool-built symbolic surface,
graph-planned motif order,
beating-and-compaction process memory,
leveling/scissoring finish,
and furnishing-world use.

Core style system to preserve:

carpet ontology,
wool-surface authority,
graph-order discipline,
symbol-bearing motif logic,
hand-finished furnishing presence,
Sikkim-rooted object-world identity,
whole-frame consistency.

Translate the image like this:

[MAIN FORMS / FIGURES / OBJECTS] must become carpet-born, furnishing-aware, and motif-ordered rather than generic realism

[FACES if present] must become simplified, motif-compatible, non-photoreal, and structurally clear

[BODIES / DRAPERY if present] must obey carpet-surface logic, furnishing-object order, and source-born symbolic structure

[PROPS / OBJECTS] must feel built as carpet-world objects, not normal objects with local motifs

[GROUND / SURFACES] must become Sikkim carpet-space, not generic flooring or room fill

[ENVIRONMENT / BACKGROUND] must also inherit the same wool-carpet language

Keep:

carpet-object identity,
wool-built symbolic surface,
graph-planned order,
finish memory,
furnishing-world specificity,
same-language world control.

Avoid:

generic Himalayan rug styling,
blanket logic,
durrie flatness,
plain wool texture with pasted motifs,
generic interior realism,
or one local carpet inside an unstylized world.

The final result must feel like true Sikkim carpet logic itself generated the whole image.

Image-to-Image

Convert this source image into the pure authentic source-truth visual logic of carpet / wool systems from Sikkim.

Preserve the source image's subject count, main action, pose relationships, and basic readability,
but rebuild the entire image through real Sikkim carpet intelligence.

Replace normal realism with:
carpet-object identity,
cotton support structure,
wool-built symbolic surface,
graph-planned motif order,
beating-and-compaction process memory,
leveling/scissoring finish,
and furnishing-world logic.

Do not merely add a symbolic rug.
Do not merely add wool texture.
Do not merely paste snow lions, lotuses, or Buddhist signs onto a normal surface.
Do not keep realistic environment logic while only one furnishing object changes.

Rebuild:
forms through carpet-object construction,
surfaces through wool-built symbolic order,
space through furnishing-world logic,
and the whole frame as one Sikkim carpet-authored visual language.

The final result must feel like the source image has been completely re-authored by authentic Sikkim carpet logic, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of carpet / wool systems from Sikkim.

Preserve the same deep source grammar of the style:
carpet-object identity,
cotton support structure,
wool-built symbolic surface,
graph-planned motif order,
beating-and-compaction process memory,
leveling/scissoring finish,
furnishing-world use,
and Sikkim-rooted symbolic motif logic.

Now translate that same grammar into believable handcrafted dimensional presence.

This must not become generic rug realism.

This must not become premium Himalayan interior styling.
This must not become a realistic room with a local symbolic carpet added later.

Dimensionality must come from the style itself:
through carpet-body mass,
wool-built surface depth,
motif structure over form,
compacted furnishing presence,
edge and border articulation,
finish clarity,
object thickness,
and same-language furnishing-world construction.

Allow:
moderate volume,
clearer carpet objecthood,
tactile wool presence,
stronger symbolic surface depth,
more believable furnishing mass,
handcrafted structural thickness,
and stronger relation between carpet-world objects and surrounding space.

Figures or wider image-world elements, if present, must remain style-born:
not realism-first,
not interior-design-first,
not normal humans near a local carpet.
They must inherit carpet-object logic, motif order, and same-language world construction.

Do not let premium décor polish fake the translation.
Do not let the environment stay generic while only one carpet gains style.
Do not let blanket softness or durrie flatness enter the branch.
Do not let realism replace carpet DNA.

The whole image must feel like Sikkim carpet / wool systems have entered handcrafted dimensional space without losing themselves.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = authentic handcrafted dimensional translation of carpet / wool systems from Sikkim.

Preserve the unchanged deep source core:
carpet-object identity,
cotton support structure,
wool-built symbolic surface,
graph-planned motif order,

beating-and-finish process memory,
furnishing-world specificity,
and Sikkim-rooted carpet intelligence.

Translate the image into handcrafted dimensional form by increasing:
volume,
carpet objecthood,
wool-surface depth,
motif articulation,
finish clarity,
furnishing mass,
figure-ground separation,
and same-language spatial structure.

Build the image like this:

[MAIN FORMS / OBJECTS] become handcrafted dimensional presences still governed by
carpet-object logic and graph-planned motif order

[FACES if present] remain simplified, motif-compatible, and non-photoreal, never
realism-first

[BODIES / DRAPERY if present] gain dimensional body but still read as style-born through
carpet grammar and furnishing-world logic

[PROPS / SUPPORTING OBJECTS] gain structure and tactility through carpet-world
construction, not generic realism

[GROUND / SURFACES] become furnishing-surface space, not generic room fill

[ENVIRONMENT / BACKGROUND] gains same-language carpet-world structure, not
generic cinematic or interior realism

Keep:

carpet-object identity,
wool-built symbolic surface,
graph-order discipline,
finish memory,
furnishing-world specificity,
same-language world control.

Avoid:

generic rug realism,
premium décor styling,
blanket softness,
durrie flatness,
plain wool texture with pasted symbols,
or one carpet inside an unstylized world.

The final image must feel like authentic Sikkim carpet grammar translated into handcrafted
dimensional presence.

Image-to-Image

Convert this source image into V2 = authentic handcrafted dimensional translation of carpet / wool systems from Sikkim.

Keep the source image's subject count, core action, and readability, but rebuild the entire image through Sikkim carpet grammar translated into handcrafted dimensional form.

The image must no longer behave like generic rug realism.

Replace that with:

carpet-object identity,
cotton support structure,
wool-built symbolic surface,
graph-planned motif order,
beating-and-compaction memory,
finish logic,
furnishing-world specificity,
and same-language carpet-world construction.

Add:

moderate dimensional presence,
tactile carpet objecthood,
clear symbolic surface depth,
strong furnishing mass,
and handcrafted spatial logic.

But do not let dimensionality come from generic room realism or premium furnishing rendering.

Do not keep normal environment or figures while only one carpet becomes local.

Rebuild all visible elements so they feel born from Sikkim carpet logic.

The result must feel like the source image has entered the carpet system's handcrafted dimensional world, not that a local symbolic carpet has been placed into an ordinary scene.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in V3 = fully resolved believable real-world 3D translation of the same source grammar of carpet / wool systems from Sikkim.

Keep the authentic Sikkim carpet style system unchanged and push it into its most complete, most embodied, most scene-capable, most volumetric image-world.

This is maximum world-depth, not realism replacement.

Preserve the same unchanged deep Sikkim carpet core:
carpet-object identity,
cotton support structure,
wool-built symbolic surface,
graph-planned motif order,
beating-and-compaction process memory,
leveling/scissoring finish,
furnishing-world use,
and same-language carpet-world construction.

Important:
do not create generic interior realism,
do not create normal furniture with one local carpet added,
do not create generic humans,
do not create generic room space,
do not create a normal world with Buddhist or symbolic rug motifs added later.

The entire world must be rebuilt through Sikkim carpet logic.

Every visible category must become source-born:
faces if present,
bodies if present,
furniture,
surfaces,
ground,
wall structures,
objects,
foreground, midground, background,
negative space,
and spatial rhythm.

Believable real-world 3D here means:
believable volume,
believable material behavior,
believable light on form,
believable spatial separation,
believable object presence,
believable scene-world logic.

But the style must still control:
object design,
surface logic,
motif order,
composition logic,
material identity,
environment logic,
and scene organization.

Increase:

full same-style world embodiment,
full spatial completion,
full object presence,
full environmental completion,
strong figure-ground separation through carpet logic,
strong readability through carpet logic,
strong whole-frame coherence through carpet logic.

Absolute rule:

the Sikkim carpet system must not decorate the world.
the Sikkim carpet system must generate the world.

The environment must not be generic realism with one symbolic carpet later.
The objects must not be normal furniture with local motifs.
Everything must feel reconstructed by the Sikkim carpet system itself.

Do not introduce:

generic realism,
generic interior styling,
premium décor polish,
blanket softness,
durrie flatness,
plain wool texture with symbols,
or a second visual language stronger than the source grammar.

The final image must feel like:

the same Sikkim carpet style itself has become a fully embodied complete volumetric scene-world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in V3 = fully resolved believable real-world 3D translation of the same source grammar of carpet / wool systems from Sikkim.

Keep the authentic Sikkim carpet style system unchanged and push it into maximum world-depth.

Preserve the same unchanged deep carpet core:

carpet-object identity,
cotton support structure,
wool-built symbolic surface,
graph-planned motif order,
beating-and-finish process memory,
furnishing-world specificity,

and same-language carpet-world construction.

Important:

the whole world must be rebuilt through Sikkim carpet logic.

Do not keep normal realism and then add carpet flavor later.

Build the image like this:

[MAIN FORMS / OBJECTS] must become source-born carpet-world objects, not normal objects with local motifs

[FACES if present] must become source-born and non-photoreal in logic, not default human realism

[BODIES if present] must become carpet-born presences, not generic people

[FURNITURE / SUPPORT OBJECTS] must become Sikkim-carpet-constructed, not generic interior décor

[GROUND / SURFACES] must become carpet-space, not generic flooring or wall fill

[ENVIRONMENT / BACKGROUND] must become same-language Sikkim carpet world-space, not generic room realism

Believable real-world 3D here means:

believable volume,

believable material behavior,

believable light on form,

believable spatial separation,

believable object presence,

believable scene-world coherence.

Increase:

full world embodiment,

full spatial completion,

full object presence,

full environmental completion,

strong figure-ground separation,

strong scene readability,

strong whole-frame orchestration.

Keep unchanged:

carpet-object identity,

wool-built symbolic surface,

graph-order discipline,

finish memory,

furnishing-world specificity,

same-language world control.

Avoid:

generic realism,

generic interior décor,

premium Himalayan styling,

blanket logic,

durrie-like flatspread logic,
style only in motifs,
or any second visual language overpowering the source grammar.

The final image must feel like:
the same Sikkim carpet grammar itself has become a believable volumetric scene-world.

Image-to-Image

Convert this source image into V3 = fully resolved believable real-world 3D translation of the same source grammar of carpet / wool systems from Sikkim.

Preserve the source image's subject count, core action, scene purpose, and main relationships,
but rebuild every visible element through Sikkim carpet intelligence fully embodied as reality.

Keep the authentic carpet system unchanged and push it into maximum world-depth.

Replace ordinary realism with:
carpet-object identity,
cotton support structure,
wool-built symbolic surface,
graph-planned motif order,
beating-and-compaction process memory,
finish logic,
furnishing-world specificity,
and same-language carpet-world construction.

Do not keep a normal room and add a local symbolic carpet later.

Do not keep normal furniture and add motifs later.

Do not keep generic surfaces and add wool texture later.

Do not let the style survive only in one furnishing object.

Rebuild:
objects as carpet-born,
surfaces as carpet-born,
space as carpet-born,
environment as carpet-born,
and the whole frame as one uninterrupted same-language Sikkim carpet scene-world.

Expand the source into:
full volumetric embodiment,
full object presence,
full environmental completion,
coherent material-light behavior,
clear spatial separation,

and complete scene readability,
but only through Sikkim carpet grammar.

Absolute rule:
the Sikkim carpet system must generate the world, not decorate the world.

The final result must feel like:
the same Sikkim carpet style itself has become a believable fully embodied volumetric
scene-world.
If it feels like reality coated with symbolic carpet flavor, it has failed.
