

Azulejos (Glazed Ceramic Tiles) - Goa

V1 — Authentic Style

Universal Hard Prompt

Rebuild the image entirely through the native visual logic of Goan azulejos, as if the image itself was created as a real hand-painted glazed ceramic tile or mounted tile plaque from Goa. Do not treat azulejos as a decorative influence, mood, color palette, or Portuguese theme. Treat azulejos as the actual image-making system.

The result must read first as:

fired ceramic tile body
glazed surface
painted-on-tile imagery
border / plaque / panel structure
mounted architectural or nameplate use

The tile must remain visible as a tile. The image must not behave like a mural, canvas painting, poster, printed signboard, wallpaper, or graphic illustration. All visible imagery must feel fused to a glazed ceramic surface.

The whole frame must obey tile logic:

the main subject must feel painted on ceramic
secondary elements must also feel tile-bound
empty space must feel like glazed tile ground, not painted wall
borders, corners, and edges must feel like plaque or panel organization
if text appears, it must feel like real azulejo inscription or house-name plaque lettering
if architecture appears, the tile must feel mounted into that architecture, not floating in front of it

V1 behavior: keep the result closest to the native source condition. Do not add false realism, false depth, cinematic atmosphere, or decorative over-stylization. The image should feel like an actual Goan azulejo tile panel, plaque, or nameplate.

Anti-failure rules:

no ordinary wall painting underneath
no printed ceramic-look graphic
no poster signage
no generic blue Portuguese décor
no non-ceramic surface behavior
no realism-first illustration with azulejo border added later

Reusable Variable Template

Rebuild **[SUBJECT / SCENE / NAMEPLATE / PANEL]** entirely through the **native logic of Goan azulejos as hand-painted glazed ceramic tile.**

Scene invariants

- Keep: **[main subject / subject count / text content if any / basic relationship / main action or message]**
- Do not change the core identity of: **[house name / figure / local scene / religious image / decorative panel purpose]**

Source-medium lock

The result must be:

- a real **ceramic tile or mounted tile plaque**
- with a **glazed surface**
- with **painted imagery fused to tile**
- with visible **border / frame / panel logic**
- with believable **mounted use in wall, staircase, entrance, façade, or plaque context**

Whole-frame rebuild rule

- **[MAIN SUBJECT]** must become tile-painted imagery, not free illustration
- **[SECONDARY SUBJECTS / DETAILS]** must also become tile-painted, not realism-first
- **[BACKGROUND / EMPTY AREAS]** must become glazed tile ground or tile panel field
- **[TEXT / LETTERING]** must behave like ceramic plaque lettering if included
- **[EDGES / BORDERS / CORNERS]** must reinforce plaque or panel structure

V1 lock

Keep it closest to the native craft condition:

- flat-to-shallow ceramic image space
- clear plaque / tile-body presence
- painted-on-glaze truth
- no false mural or poster behavior

Block these failures

- printed signboard look
- wallpaper pattern logic
- blue-themed décor only
- mural-painted wall pretending to be azulejos
- ordinary illustration with ceramic sheen added later

Image-to-Image

Convert this source image into the **source-faithful visual logic of Goan azulejos**, as if the entire image were rebuilt as a **real hand-painted glazed ceramic tile panel or mounted tile plaque**.

Preserve:

- subject count
- core action or message
- text content if present
- basic hierarchy of important elements

But replace all ordinary image logic with:

- fired ceramic tile body
- glazed surface
- painted-on-tile imagery
- border / frame / panel structure
- mounted plaque or architectural tile use

Do not simply place the source image inside a blue border. Do not just flatten it. Do not just add ceramic texture. Rebuild the whole image so every visible element feels like it belongs to a true azulejo tile system.

Must enforce

- no canvas behavior
- no mural behavior
- no printed signboard behavior
- no generic Portuguese nostalgia styling
- no ordinary illustration underneath

V2 — Artisan Translation

Universal Hard Prompt

Rebuild the image through a **source-rooted dimensional translation of Goan azulejos**, where the full image still remains governed by **glazed ceramic tile logic**, but the tile system gains **more tactile dimensional presence, surface depth, mounting reality, and panel-space richness**.

This is **not** “the same azulejo with more shine.”

This is **not** “a realistic scene with azulejo influence.”

This is the **azulejo system itself extending into a shallow dimensional world** while the tile body, glaze, panel structure, and ceramic truth remain in control.

The result must still read first as:

- glazed ceramic tile
- hand-painted tile surface
- plaque / panel / border logic
- mounted objecthood
- Goan architectural or nameplate context

But it may now gain:

- tile thickness
- edge relief
- glaze tactility
- subtle surface depth
- stronger border and panel articulation
- richer mounted presence in architectural space

The whole frame must still obey **tile authority**:

- the subject is still tile-painted, not realism-first
- background is still tile-ground, not mural spread
- the plaque / panel body must still remain structurally visible
- text, if present, must still feel tile-inscribed or plaque-painted
- the result must still feel mounted and ceramic, not printed or wallpaper-like

V2 behavior: allow shallow dimensional extension, stronger glaze presence, richer tile-body tactility, and stronger architectural placement, but do not let ordinary realism take over.

Anti-failure rules:

- no generic decorative ceramic render
- no faux-vintage wall graphic
- no realism-first scene with tile panel added later
- no poster-sign look
- no mural-space replacing tile-space
- no luxury polish that erases hand-painted tile identity

Reusable Variable Template

Rebuild **[SUBJECT / SCENE / NAMEPLATE / PANEL]** through a **source-rooted dimensional translation of Goan azulejos**.

Scene invariants

- Keep: **[main subject / text / message / role relationship / core scene]**
- Do not change the main communicative or visual job of the image

Source-medium lock

The result must still be:

- a glazed ceramic tile surface
- a painted-on-tile image
- a real plaque / panel / tile body
- mounted into architecture or behaving like a believable plaque object

Whole-frame rebuild rule

- **[MAIN SUBJECT]** must remain tile-painted, but gain richer ceramic presence
- **[SECONDARY ELEMENTS]** must remain tile-bound, not realism-first
- **[BACKGROUND]** must remain ceramic field or tile panel space
- **[BORDERS / FRAME / CORNERS]** must become more tactile and structurally tile-like
- **[TEXT]** must remain plaque-native if used

V2 lock

Allow:

- shallow dimensional ceramic presence
- glaze depth
- plaque thickness
- mounted-surface realism
- stronger tile relief and border articulation

Do not allow:

- normal illustration underneath
- printed sign logic
- wall mural logic
- decorative tile mood without tile-body truth

Image-to-Image

Convert this source image into a **dimensional Goan azulejo tile system**.

Keep:

- subject count
- text content if present
- scene purpose

- visual hierarchy

But rebuild the image so it feels like:

- a real ceramic plaque or tile panel
- painted by hand on glaze
- structurally mounted
- tactile in edge, border, and glaze
- richer in tile thickness and ceramic presence than V1

The entire image must still feel like a tile image, not an illustration coated with gloss.

Must enforce

- no mural look
- no poster-plaque look
- no generic ceramic souvenir styling
- no decorative blue mood without tile logic
- no realism-first image with azulejo framing added later

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Rebuild the image through a **full-world translation of Goan azulejos**, where the azulejo system does not merely decorate the image — it **generates the whole visual reality**. The world must feel as if **glazed ceramic tile logic invented the scene**.

This does **not** mean “make it realistic and cinematic with blue tiles.”

This means:

- the tile body still matters
- glaze still matters
- painted-on-ceramic logic still matters
- plaque / panel / border / inscription logic still matters
- Goan architectural mounting still matters
- and yet the entire world now behaves as if **azulejo tile-thinking controls all visible form**

Every visible element must belong to the azulejo system:

- main subject
- secondary figures or objects
- architecture
- borders
- surface transitions

- signage
- spatial framing
- decorative field
- empty space

Origin-material memory must survive.

Even in V3, the result must still visibly remember:

- fired ceramic body
- glazed skin
- painted tile surface
- plaque / panel organization
- mounted architectural use
- Goan house / church / staircase / entrance logic

So V3 is not ordinary realism.

It is a **world where ceramic tile image logic becomes reality.**

The result may gain:

- full spatial immersion
- stronger world coherence
- richer architectural integration
- deeper plaque / tile / mounted-surface presence
- fuller cinematic readability

But it must never lose:

- ceramic body truth
- glaze truth
- tile-unit or plaque logic
- painted-on-tile identity

Anti-failure rules:

- no generic realistic Goa architecture with pretty tiles added later
- no mural realism underneath
- no signboard realism underneath
- no decorative blue nostalgia
- no Portuguese-themed image with ceramic accents
- no realism engine stronger than tile engine

Reusable Variable Template

Rebuild **[SUBJECT / SCENE / NAMEPLATE / ARCHITECTURAL MOMENT / TILE WORLD]** through a **full-world azulejo translation**, where Goan glazed ceramic tile logic generates the whole image.

Scene invariants

- Keep: **[main subject / message / text if any / role relationships / core scene purpose]**
- Do not change the essential scene identity

Source-medium lock

The world must still visibly remember:

- ceramic tile body
- glaze
- painted-on-tile image logic
- plaque / panel / tile-unit organization
- mounted architectural or signage use
- Goan azulejo heritage grounding

Whole-frame rebuild rule

- **[MAIN SUBJECT]** must feel born from azulejo tile imagery, not realism-first representation
- **[SECONDARY SUBJECTS]** must also obey painted ceramic logic
- **[ARCHITECTURE / BACKGROUND / WALLS / ENTRANCES]** must feel generated by mounted tile intelligence
- **[TEXT / LETTERING]** must remain structurally native if present
- **[EMPTY SPACE / SURFACE TRANSITIONS / EDGES]** must behave like tile-world space, not generic realism space

V3 lock

Allow:

- full spatial world-building
- deeper architecture
- stronger world coherence
- cinematic readability
- tile-world immersion

But preserve:

- ceramic origin memory
- glaze behavior
- painted surface identity
- panel/plaque logic
- mounted tile truth

Block these failures

- realistic world with azulejo applied later
- generic blue heritage mood
- printed signage look
- mural-space replacing tile-space
- ceramic origin disappearing under realism

Image-to-Image

Convert this source image into a **full-world Goan azulejo reality**, where the whole image is rebuilt as if **azulejo tile logic invented the visible world**.

Preserve:

- subject count
- text if present
- main scene purpose
- role relationships
- message hierarchy

But rebuild everything through:

- glazed ceramic tile body memory
- painted-on-tile image logic
- plaque / panel / border organization
- mounted architectural use
- Goan azulejo surface intelligence

Do not merely make surfaces ceramic.

Do not just add a border.

Do not simply turn objects blue and white.

The model must rebuild:

- figures as tile-born presences
- architecture as plaque / panel / mounted-surface-aware space
- text as native ceramic inscription if present
- empty areas as tile-world ground
- the entire frame as a reality governed by azulejo logic

Must enforce

- no ordinary realism underneath
- no mural simulation
- no printed plaque simulation
- no decorative Portuguese styling without tile truth
- no generic blue ceramic mood without ceramic world logic
