

Bastar woodcraft - Chhattisgarh

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful visual logic of Bastar Wooden Craft from Chhattisgarh**. Treat this as a **solid-wood, hand-carved tribal object tradition**, not as generic tribal décor, rustic interior styling, furniture carving, painted wooden folk craft, or polished showroom wood sculpture. Build the image as if it comes from a real Bastar carved-object world shaped by **solid wood mass, hand-tool subtraction, carved silhouette, ritual-cultural symbolism, and handmade individuality**.

The image must read **object-first**. The form must feel like it was cut, scraped, shaped, and carved from a real block of wood. Preserve the sense of **solid wooden mass, hand-tool shaping, carved grooves, ridges, cut planes, and symbolic carved objecthood**. The object should feel materially rooted in **wood, tools, hand labor, and Bastar cultural memory**, not just “wooden-looking.”

Use the native Bastar Wooden Craft object world: **gods, goddesses, masks, creatures, figurines, festival-linked forms, carved decorative objects, and historically totemic wooden forms**. Human and animal forms must remain **iconic carved presences**, not realism-first figures. Surface detailing should grow out of carving structure, not be painted on later or applied as ornamental skin.

Material behavior must preserve **real wood truth**: warm wooden body, grain-bearing mass, hand-carved irregularity, matte-to-soft sheen rather than luxury gloss, and visible memory of tool-driven shaping. Composition must remain object-centered and silhouette-led. Ornament must remain structural, cut into the object through carving logic rather than surface garnish.

Do not make this generic tribal wood décor, machine-routed woodwork, molded or cast substitute wood object, polished luxury carving, realism-first wooden sculpture, or tribal motifs added onto ordinary carved pieces. Do not lose the carving process memory. Do not lose solid wood ancestry. Do not let realism or polish overpower carved-object truth.

Reusable Variable Template

Create **[SUBJECT / OBJECT / FIGURE / RITUAL OR CULTURAL FORM]** in the **authentic source-faithful visual logic of Bastar Wooden Craft from Chhattisgarh**.

Treat the style as a **solid-wood carved object system** built from:

- solid wood mass

- hand-tool shaping and subtraction
- carved grooves, ridges, and cut planes
- symbolic Bastar subject identity
- ritual and festival-cultural object presence
- handmade non-industrial individuality
- object-first silhouette logic

Preserve these non-negotiable style rules:

- the result must feel carved, not molded, cast, machined, or assembled
- the form must feel first cut from solid wood
- the surface must feel structurally carved, not decorated afterward
- the object must remain stronger than the environment around it
- the subject must belong to Bastar's ritual-cultural carved world
- the whole image must behave like a Bastar carved-object field

Translate the subject like this:

- **[MAIN OBJECT / MAIN FIGURE]** becomes the dominant Bastar carved wooden form
- **[SECONDARY OBJECTS / SUPPORTING FIGURES / CREATURES / RITUAL ELEMENTS]** become subordinate carved forms with the same structural logic
- **[SURFACE DETAIL]** becomes tool-cut rhythm, carved relief, grooves, ridges, and hand-shaped articulation
- **[SUPPORT SPACE / CONTEXT]** remains minimal and subordinate, only enough to strengthen carved object truth

Keep:

- solid wood objecthood
- tool-made shaping
- carved silhouette truth
- handmade individuality
- Bastar ritual-cultural object logic
- warm natural wood material truth

Avoid:

- generic wooden tribal décor
- industrial precision
- smooth luxury finish
- molded or cast look
- realism-first sculpture
- tribal motifs added later

Image-to-Image

Convert this source image into the **authentic source-faithful visual logic of Bastar Wooden Craft from Chhattisgarh**.

Preserve the source image's **subject count, main object relationships, pose logic, silhouette logic, and overall readability**, but rebuild the entire image as a **solid-wood Bastar carved object system**. Replace ordinary surfaces and forms with **solid wood mass, hand-tool subtraction, carved grooves and ridges, cut planes, Bastar symbolic subjecthood, and handmade carved detailing**.

If the source contains human or animal figures, rebuild them as **iconic carved presences** rather than realism-first bodies. If it contains masks, ritual forms, festival-linked objects, or decorative carved pieces, reconstruct them as true Bastar Wooden Craft objects, not as ordinary wooden products. If the source contains background or setting, it must stay subordinate to the carved object so the whole image still feels generated by Bastar carving intelligence.

Do not simply make the image wooden. Do not add carved-looking grooves to a normal object. Do not turn it into generic tribal décor or a polished wooden souvenir. The final result must feel like the source image has been fully rebuilt through authentic Bastar solid-wood carving logic.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic handcrafted dimensional visual logic of Bastar Wooden Craft from Chhattisgarh**. Keep the full source grammar intact, but translate it into a richer handcrafted dimensional object-world. This version must still feel completely **carving-born and wood-born**, not realism-born and not decorative rustic styling.

Preserve the full source grammar: **solid wood block ancestry, hand-tool shaping, carved grooves and ridges, symbolic Bastar subject identity, ritual-cultural carved objecthood, and handmade individuality**. Then allow the object to become more tactile, more materially present, and more spatially articulated while still remaining unmistakably Bastar Wooden Craft.

The form must still feel first carved from solid wood. The surface must still feel like carved relief, cut planes, scraped transitions, and handmade structure. The object may gain more depth, more thickness, stronger edge presence, and richer material-light interaction, but it must still remain **carved-object truth first**. Human and animal forms must still read as **iconic carved figures**, not realism-based sculpture. Masks, festival forms, deities, and

decorative objects must still remain process-born carved artifacts, not designed décor products.

Material behavior should preserve a warm wooden body with subtle hand irregularity, softened sheen, tactile relief, and visible process memory. Ornament must remain structural and integrated. Composition must still remain object-centered, silhouette-led, and process-aware.

Do not make this a polished artisan wood render, gallery-product shot, decorative 3D tribal wood illustration, or realism-first wooden sculpture. Do not let dimensionality erase tool ancestry, solid-wood memory, or hand-carved individuality.

Reusable Variable Template

Create **[SUBJECT / OBJECT / FIGURE / RITUAL OR CULTURAL FORM]** in the **authentic handcrafted dimensional visual logic of Bastar Wooden Craft from Chhattisgarh.**

Treat the style as a **solid-wood carved object system** and translate it into a richer handcrafted dimensional world while preserving these non-negotiable rules:

- the form still feels carved from solid wood
- the object still feels hand-made, not industrial
- tool-cut structure still remains visible in spirit
- the subject still belongs to Bastar's ritual-cultural carved world
- the environment remains secondary to object truth
- the whole image remains object-first, not realism-first

Translate the subject like this:

- **[MAIN OBJECT / MAIN FIGURE]** becomes a richer tactile Bastar carved wooden form
- **[SECONDARY OBJECTS / SUPPORTING FIGURES / CREATURES / RITUAL ELEMENTS]** become subordinate carved presences with matching structural logic
- **[SURFACE DETAIL]** becomes dimensional carving rhythm, grooves, ridges, recessed planes, and hand-cut articulation
- **[SUPPORT SPACE / CONTEXT]** becomes a restrained field that strengthens handcrafted object presence

Let these become richer:

- carved surface relief
- cut depth and groove clarity
- object weight and wooden presence
- wood-light interaction
- handcrafted detail legibility
- spatial object presence

Keep unchanged:

- solid wood carved identity
- tool-driven shaping
- carved symbolic subjecthood
- handmade individuality
- Bastar object-world logic

Avoid:

- polished décor rendering
- machine-clean woodwork
- decorative rustic styling
- realism-first anatomy
- generic artisan wood aesthetic
- environment overpowering the object

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional visual logic of Bastar Wooden Craft from Chhattisgarh**.

Preserve the source image's **main object relationships, silhouette, pose logic, and readability**, but rebuild the full image through a **dimensional Bastar carved object system**. Replace ordinary material behavior with **solid wood mass, hand-tool subtraction, carved grooves and ridges, cut planes, Bastar symbolic identity, and handmade process-born detailing**.

Allow the image to gain richer tactile depth, stronger carved relief, more visible material weight, and more dimensional object presence than the source-faithful version, but keep the style fully object-first. Every figure, creature, mask, deity, or decorative form must still feel like a Bastar Wooden Craft artifact rather than a realism-first object with tribal styling.

Do not wood-texture a normal object and call it done. Do not turn the scene into decorative rustic craft illustration or product-design rendering. The final result must feel like the source image has been rebuilt through a handcrafted dimensional Bastar carving intelligence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic translation of Bastar Wooden Craft from Chhattisgarh**. Convert the complete source grammar into a believable three-dimensional world while keeping **Bastar carving intelligence** in control. This must not become generic rustic realism, decorative tribal wood décor, or fantasy wooden sculpture. It must feel like a **Bastar carved-object world became real**.

Keep the full source grammar intact: **solid wood ancestry, hand-tool shaping, carved grooves and ridges, cut planes, symbolic Bastar subject identity, ritual-cultural objecthood, and handmade individuality**. Then translate that grammar into full volume: stronger carved mass, richer spatial staging, clearer figure-ground separation, deeper object-world coherence, and cinematic readability — but only under the authority of the carving system.

Preserve the origin-material memory. By default, render the world as if it grows directly out of **solid wood block ancestry, hand-tool subtraction, carved grooves, scraped surfaces, ridges, cut planes, grain-bearing wooden mass, and hand-finished individuality**. Even in full 3D, the world must still visibly remember **wood, tools, and hand labor**. The result must not become smooth CGI wood, polished luxury décor carving, generic fantasy wooden realism, or themed wooden world-building. It must still feel like a **process-born carved-object world**.

The object must still govern the scene. Gods, goddesses, masks, creatures, figurines, festival forms, and decorative carved objects must still behave as **Bastar carved presences**, not as ordinary realistic props. The world must not merely host the style; the world must feel generated by the style's solid-wood carving intelligence.

Do not create generic tribal wood décor, showroom wood styling, cinematic rustic realism, fantasy carved architecture, glossy product-shot aesthetics, or ordinary realism with tribal carving motifs added later. Do not let polish replace process. Do not erase carved-tool ancestry. Do not let environment overpower the object.

Reusable Variable Template

Create **[SUBJECT / OBJECT WORLD / FIGURE / RITUAL OR CULTURAL FORM]** as a **fully volumetric cinematic translation of Bastar Wooden Craft from Chhattisgarh**.

Treat the style as a **solid-wood carved object system** and translate it into a believable three-dimensional world without losing these non-negotiable rules:

- the form still feels first carved from solid wood
- tool-cut structure remains active in the final image
- solid-wood ancestry remains visible in material memory
- the object still feels hand-carved and individually made
- the subject still belongs to Bastar ritual-cultural carved object culture
- the object remains stronger than the environment around it
- the whole frame remains governed by carved-object intelligence

Material-origin rule:

- default to **solid wood + hand-tool subtraction origin memory**
- preserve wood block ancestry, carved grooves, cut planes, scraped surfaces, ridge formation, grain-bearing mass, and hand-finished individuality
- keep the wood warm, tactile, process-born, and non-industrial
- even in full 3D, the world must still feel **born from carving**, not from product design or fantasy set styling

Translate the subject like this:

- **[MAIN OBJECT / MAIN FIGURE]** becomes the dominant volumetric Bastar carved presence
- **[SECONDARY OBJECTS / SUPPORTING FIGURES / CREATURES / RITUAL ELEMENTS]** become subordinate carved forms with matching process-born logic
- **[SURFACE DETAIL]** becomes volumetric carving rhythm, groove systems, cut relief, ridged structure, and hand-finished wooden articulation
- **[ENVIRONMENT / SUPPORT SPACE]** becomes a cinematic but still object-governed Bastar carved world

Increase:

- object volume and weight
- figure-ground separation
- wood-light interaction
- carved relief and depth
- spatial readability
- world-scale object coherence

Do not lose:

- solid-wood carved identity
- tool-made shaping memory
- hand-carved individuality
- Bastar ritual-cultural object logic
- process-memory stronger than polish

Avoid:

- generic rustic realism
- decorative tribal wood styling
- showroom luxury finish
- fantasy wooden environment
- polished CGI wood
- realism overpowering carved-object truth

Image-to-Image

Convert this source image into a **fully volumetric cinematic translation of Bastar Wooden Craft from Chhattisgarh**.

Preserve the source image's **subject count, main object relationships, silhouette logic, pose logic, and scene readability**, but rebuild the entire frame as if **Bastar carving grammar became a cinematic three-dimensional world**. Replace ordinary material and object logic with **solid wood ancestry, hand-tool subtraction, carved grooves and ridges, cut planes, grain-bearing wooden mass, hand-finished individuality, and Bastar ritual-cultural object intelligence**.

Then expand that structure into full volume: stronger object mass, richer carved surface relief, clearer spatial staging, deeper material-light interaction, and fuller world completion. But every part of the frame must still obey Bastar Wooden Craft law. The object must remain object-first. The surface must still feel process-born. The world must still read as a carved-object world made real, not as ordinary realism with tribal wooden décor added later.

Do not simply turn the source image into wood. Do not add carved-looking grooves to a normal object. Do not make it fantasy wooden cinema or polished décor styling. Do not lose the origin-material memory of **solid wood, tool-driven shaping, and hand-carved individuality**.

The final image must feel like the source image has been fully rebuilt through **fully volumetric Bastar Wooden Craft intelligence with process-memory, object-truth, and ritual-cultural meaning all intact**.
