

Azulejos (Glazed Ceramic Tiles) - Goa

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Goan azulejos, meaning real hand-painted glazed ceramic tile used in plaques, nameplates, wall panels, stair surfaces, house entrances, façades, and heritage architectural settings in Goa.

Do not assume prior knowledge of the style. Rebuild the entire image as if it is made on real fired ceramic tiles with a hard ceramic body, white or pale glazed ground, hand-painted cobalt-blue or indigo-blue imagery and lettering, controlled handmade brush line, ornamental border structure, plaque or panel framing, and mounted architectural use.

This must not look like a mural, poster, wallpaper, printed signboard, enamel board, generic Mediterranean décor, or a normal image with blue tile styling added on top. It must read first as painted glazed ceramic tile.

WHOLE-FRAME CONVERSION RULE:

Every visible element must belong to the same azulejo system:

- all people become hand-painted tile figures
- all objects become painted ceramic forms
- all plants, trees, animals, decorative motifs, and architectural details become tile-painted elements
- all empty areas become glazed ceramic ground or plaque field
- all edges and corners obey border, plaque, or panel logic
- if text appears, it must behave like real ceramic plaque lettering or house-nameplate lettering

MATERIAL RULE:

Use a fired ceramic tile body, glazed surface, slightly reflective but not plastic glaze sheen, hand-painted linework, slight handmade irregularity, hard panel edges, believable mounted objecthood, subtle grout or tile-join awareness if the design uses multiple tile units.

FORM RULE:

Keep forms stylized and tile-readable rather than realistic. Figures, buildings, animals, plants, and objects must feel painted onto ceramic, not modeled through realistic depth. Use clear contour, strong silhouette readability, border framing, and plaque-centered composition.

SPACE RULE:

Use flat to shallow pictorial space. Do not use deep western perspective as the main engine. The image should feel like a ceramic plaque, panel, or tile field with organized internal space, not a naturalistic scene.

COLOR RULE:

Use a blue-dominant painted ceramic language on a light glazed base. Keep the palette restrained and ceramic. Small secondary accents are allowed only if they remain subordinate to the painted glazed tile identity.

COMPOSITION RULE:

Use plaque, panel, border, and central-field logic. The image should feel mounted, framed, and architecturally placeable. If the design is inscription-led, text should be central and decorative elements should support it. If the design is pictorial, the central image zone should remain dominant and the border should structure the reading.

NEGATIVE RULE:

no mural-painted wall
no poster or print texture
no digitally flat vector look
no generic blue Portuguese nostalgia
no photorealistic scene underneath
no glossy plastic ceramic souvenir styling
no ordinary signboard with tile colors
no normal realism with azulejo border added later

OUTPUT GOAL:

The final result must feel like a true Goan hand-painted glazed ceramic azulejo plaque or tile panel where the whole image is generated by ceramic tile logic.

Reusable Variable Template

Create [SUBJECT / SCENE / NAMEPLATE / PANEL] as an authentic Goan azulejo image built as real hand-painted glazed ceramic tile.

STYLE SYSTEM:

Goan architectural tile and plaque tradition, fired ceramic tile body, white or pale glazed ground, hand-painted blue ceramic imagery and/or lettering, decorative border framing, mounted plaque or panel logic, house-nameplate / entrance / façade / staircase / wall-surface credibility.

WHOLE-FRAME RULE:

Rebuild every visible element through the same ceramic tile language:

- [MAIN SUBJECT] becomes a painted ceramic focal form
- [SECONDARY SUBJECTS] become supporting painted ceramic forms
- [TEXT / NAME / WORDING] becomes ceramic plaque lettering if present
- [BORDER / FRAME / CORNERS] become painted azulejo border structure
- [BACKGROUND / EMPTY AREAS] become glazed ceramic field, not ordinary atmosphere
- [ARCHITECTURAL CONTEXT] becomes believable mounted Goan tile placement

MATERIAL RULE:

hard fired ceramic body, glazed surface, slight ceramic sheen, hand-painted brush control, subtle handmade irregularity, mounted plaque or tile-panel truth

SPACE RULE:

flat to shallow pictorial space, panel-controlled depth, no realism-first staging

KEEP:

ceramic tile identity
painted-on-glaze logic
plaque or panel structure
mounted architectural use
Goan azulejo readability

AVOID:

mural logic
print logic
poster logic
generic blue décor
photoreal scene under the style
signboard shortcut

Image-to-Image

Convert this source image into an authentic Goan azulejo plaque or tile panel.

Preserve the source image's essential message, subject count, major action, and key text if any, but rebuild the full image through fired glazed ceramic tile logic.

Convert the whole frame so it behaves like:

- real ceramic tile or mounted plaque
- hand-painted blue ceramic imagery and/or lettering
- white or pale glazed ground
- border and central field organization
- plaque or panel readability
- believable Goan architectural or house-nameplate use

Everything must be translated:

- people into painted ceramic figures
- objects into painted ceramic forms
- plants and decorative elements into azulejo-compatible motifs or painted tile details
- empty space into glazed tile field
- text into true plaque lettering if present

Do not simply add a blue border.

Do not just flatten the source image.

Do not just apply a ceramic texture.

Do not turn it into a poster or printed signboard.

The final result must feel like the source image was rebuilt from the beginning as a real Goan hand-painted glazed ceramic azulejo surface.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in an authentic handcrafted dimensional translation of Goan azulejos, where the native painted glazed ceramic tile logic remains primary, but the tile world gains tactile dimensional presence, plaque thickness, edge relief, mounted depth, and stronger ceramic material readability.

Do not assume prior knowledge of the style. Treat Goan azulejos as real hand-painted glazed ceramic plaque and tile systems used in house-nameplates, walls, staircases, and mounted architectural surfaces. This version must still read first as ceramic tile, not as realism, not as a mural, and not as decorative nostalgia.

WHOLE-FRAME CONVERSION RULE:

The entire image must still be rebuilt through azulejo logic:

- figures become tile-painted or plaque-born presences
- objects become ceramic-surface forms
- borders, trims, architecture, signage, and surrounding details inherit the same tile grammar
- any visible space must still feel organized by plaque, tile-field, or mounted panel logic
- if text appears, it must remain structurally native to ceramic inscription or house-nameplate use

MATERIAL RULE:

Use hard fired ceramic body, glaze depth, slight bevel or thickness at tile edges, subtle surface reflection from glaze, visible plaque relief, believable mounted presence, optional multi-tile segmentation where appropriate, and handmade brush-control rather than machine-perfect printing.

FORM RULE:

Keep painted ceramic image logic primary. Allow richer plaque depth, border articulation, edge relief, tile thickness, and mounted object presence, but do not let forms turn into normal realistic illustration.

SPACE RULE:

Use shallow dimensional plaque-space, not mural space and not realism-first cinematic depth. The world may gain object depth and tactile mounted presence, but it must remain tile-born.

COMPOSITION RULE:

The plaque, panel, or tile field must stay central. Border and frame must feel structural. The main image or inscription zone must still read cleanly as part of a mounted ceramic system.

NEGATIVE RULE:

no printed board
no souvenir-shop ceramic render
no decorative blue nostalgia without tile logic
no generic 3D architecture with tile accent
no mural-spread image
no photorealistic scene underneath
no glossy plastic look
no random Mediterranean tile styling

OUTPUT GOAL:

The final result must feel like Goan azulejo logic has expanded into a tactile handcrafted dimensional plaque-world while remaining fully ceramic and tile-governed.

Reusable Variable Template

Create [SUBJECT / SCENE / NAMEPLATE / PANEL / ARCHITECTURAL TILE MOMENT]
as an authentic handcrafted dimensional Goan azulejo image.

STYLE SYSTEM:

painted glazed ceramic tile,
mounted plaque or tile panel,
blue ceramic image language on pale glaze,
border and central field structure,
Goan house / entrance / wall / façade / staircase use,
hand-painted not printed

WHOLE-FRAME RULE:

- [MAIN SUBJECT] becomes a dimensional ceramic focal form
- [SECONDARY SUBJECTS] become supporting painted tile forms
- [TEXT / WORDING] becomes inscription integrated into plaque structure if present
- [BORDER / FRAME / CORNERS] become tactile ceramic border logic
- [SURROUNDING SURFACES] become mounted tile-aware architectural support
- [EMPTY AREAS] remain glazed panel field, not neutral realism space

ALLOW THESE TO BECOME RICHER:

tile thickness
plaque depth
glaze tactility
edge relief
mounted presence
architectural attachment

KEEP:

tile-first identity
painted-on-glaze logic
handmade brush behavior
Goan azulejo readability
panel or plaque structure

AVOID:

poster-plaque look
generic ceramic décor
mural look
ordinary realism with blue tile added later
print logic
plastic gloss

Image-to-Image

Convert this source image into an authentic handcrafted dimensional Goan azulejo plaque-world.

Keep the source image's main message, text if any, subject hierarchy, and readable staging, but rebuild the image as a real painted glazed ceramic system with stronger tactile objecthood.

Translate the whole frame into:

- fired ceramic tile or plaque body
- blue hand-painted imagery and/or lettering on pale glaze
- real border and central image-zone structure
- plaque depth and tile thickness
- subtle mounted relief and ceramic edge behavior
- believable Goan architectural placement

Do not just apply gloss or tile texture.

Do not place the source image inside a decorative ceramic frame.

Do not turn the result into a generic blue heritage object.

The final result must feel like the source image was rebuilt as a dimensional mounted Goan azulejo plaque or tile panel, still governed completely by painted glazed ceramic logic.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image as a fully volumetric cinematic world generated by Goan azulejo intelligence, where the whole reality feels invented by painted glazed ceramic tile logic rather than merely decorated by it.

Do not assume prior knowledge of the style. The core system is this:

Goan azulejos are hand-painted glazed ceramic tiles, plaques, and nameplates mounted in architecture. Their identity comes from fired ceramic body, glaze, painted blue imagery or lettering on pale ground, border logic, plaque logic, and integration into homes, façades, walls, staircases, and entrances.

In this version, do not merely place tiles inside a realistic world. Instead, let the entire world be generated by azulejo structure.

WHOLE-FRAME WORLD RULE:

Every element must belong to the same tile-born system:

- figures must feel like azulejo-derived beings, not normal realistic humans with ceramic styling
- objects must feel like plaque-born or tile-born forms
- architecture must feel built through mounted ceramic panel intelligence
- walls, paths, trims, stair edges, signage, vegetation, decorative fields, and empty surfaces must all inherit painted glazed tile logic
- inscriptions, if any, must remain native to ceramic plaque language
- no important element may remain in ordinary realism

ORIGIN-MATERIAL MEMORY RULE:

Even though this is a fully volumetric cinematic world, the image must still visibly remember:

- hard fired ceramic body
- glaze sheen
- painted surface rather than printed surface
- plaque / border / panel organization
- mounted architectural use
- blue-on-light ceramic identity

FORM RULE:

Allow full spatial depth, cinematic staging, figure-ground separation, and architectural world-building, but keep the design controlled by azulejo simplification, plaque logic, border awareness, painted contour, and ceramic structure.

SPACE RULE:

This is now a believable world, but not a realism-first world. Spatial depth must still feel as though it arose from tile-panel intelligence, mounted surface organization, and plaque-based compositional thinking.

NEGATIVE RULE:

no ordinary realistic Goa street with pretty tile accents
no mural-paint world
no printed signage
no porcelain sticker aesthetics
no generic blue Mediterranean fantasy
no poster logic
no plastic CGI ceramic
no realism engine stronger than tile engine

OUTPUT GOAL:

The final result must feel like Goan azulejo logic became an inhabitable cinematic reality while still preserving ceramic origin-memory and whole-frame style control.

Reusable Variable Template

Create [SUBJECT / SCENE / ARCHITECTURAL MOMENT / TILE WORLD / NAMEPLATE WORLD] as a fully volumetric cinematic world generated by Goan azulejo logic.

STYLE SYSTEM:

hand-painted glazed ceramic tile tradition from Goa,
fired ceramic body,
pale glazed ground,
blue painted imagery and lettering,
border and plaque logic,
mounted architectural integration,
house-nameplate and façade intelligence

WHOLE-FRAME WORLD RULE:

- [MAIN SUBJECT] becomes an azulejo-born volumetric focal presence
- [SECONDARY SUBJECTS] become branch-consistent ceramic-world forms
- [OBJECTS / PROPS / ANIMALS / PLANTS] become tile-derived or plaque-derived forms
- [ARCHITECTURE / WALLS / STAIRCASES / ENTRANCES] become mounted ceramic-world space
- [TEXT / WORDING] becomes structurally native ceramic inscription if present
- [EMPTY AREAS / GROUND / SURFACE TRANSITIONS] remain controlled by tile-world logic, not generic realism

INCREASE:

world depth
mounted architectural integration
ceramic-light interaction
plaque and border depth
spatial readability
whole-world coherence

DO NOT LOSE:

ceramic origin-memory
painted-on-glaze identity
panel or plaque structure
blue-on-light tile language
Goan azulejo grounding

AVOID:

realistic world with tile accent only
mural logic
poster signage
generic heritage-blue mood
plastic ceramic styling
ordinary realism stronger than azulejo logic

Image-to-Image

Convert this source image into a fully volumetric cinematic Goan azulejo world.

Preserve the source image's key action, core hierarchy, readable staging, and any essential text, but rebuild all visible forms so the world feels generated by painted glazed ceramic tile intelligence.

Rebuild the frame through:

- fired ceramic body memory
- glaze behavior
- blue hand-painted surface imagery and/or lettering
- border and plaque logic
- mounted Goan architectural use
- tile-born world structure rather than realism-first structure

Translate:

- people into azulejo-born volumetric presences
- objects into plaque-aware or tile-aware forms
- surfaces into mounted ceramic fields
- architecture into tile-structured space
- text into ceramic inscription if present

Do not just add tiles to the environment.

Do not make a realistic scene and then decorate it.

Do not let ceramic become a surface filter only.

The final image must feel like the source image was rebuilt into a cinematic Goan azulejo reality where the entire world belongs to the same painted glazed ceramic system.
