

Godna - Bihar

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic source-faithful visual logic of **Godna painting from Bihar**, specifically the **Madhubani / Mithila Godna branch** that evolved from the older Indian **tattooing tradition**. Treat this as a **tattoo-derived inscribed sign system translated into painting**, not as generic tribal tattoo art, not as generic Madhubani painting, not as decorative pattern filler, and not as realism with ethnic motifs added later.

Build the whole image as if it comes from a real **body-mark tradition** where motifs first existed as permanent signs on skin and only later moved onto paper, cloth, or canvas. The image must feel **inscribed**, not merely painted. Use **repeated symbolic motif units**, **controlled mark-based linework**, **compact sign-bearing figures**, and a **field built from coded repetition rather than scenic realism**. Let every major element behave like a durable sign that could once have lived on the body.

Figure logic: if human, deity, or animal figures appear, reduce them into **Godna-compatible inscribed forms**. Faces should be simplified, sign-like, and controlled rather than portrait-realistic. Bodies should feel mark-built, not anatomy-built. Animals and mythic subjects should remain symbolic and repeatable rather than naturalistically rendered. Every figure must feel as if it belongs to a tattoo-derived mark world.

Motif logic: use **repeated symbolic units** such as fishbone-like structures, bindu-like sun forms, chain-like protective motifs, bangle-like circular structures, and other sign-bearing Godna-derived mark families where relevant. These motifs must behave as **coded units**, not as decorative wallpaper. Repetition must feel deliberate, identity-bearing, and structurally meaningful.

Color logic: keep the strongest native palette memory active through **black, earthy brown, and deep blue**, with a restrained, permanent, spiritually charged feeling rather than bright festive folk spread. Color must support inscription logic, not overpower it.

Space logic: treat the image as a **sign field**, not as a scenic window. The background must support inscribed mark behavior rather than mural-like narrative spread or atmospheric depth. Even when the subject includes mythology, animals, or nature, the whole field must still feel governed by tattoo-memory and symbolic permanence.

Do not make this generic tattoo flash art, generic tribal pattern design, generic Madhubani with darker colors, decorative filler spread, painted realism with Godna motifs placed on top, or a symbolic-looking image that has lost body-mark ancestry. The final image must feel like true Bihar Godna: **tattoo-derived, inscribed, symbolic, restrained, and structurally tied to the shift from skin-mark to painted surface**.

Reusable Variable Template

Create **[SUBJECT / SCENE]** in the authentic source-faithful visual logic of **Godna painting from Bihar**, specifically the **Mithila / Madhubani Godna style** rooted in tattoo-derived sign systems.

Core style system to preserve:

- tattoo-origin body-mark memory
- inscribed mark logic rather than painterly illustration
- repeated symbolic motif units
- identity-bearing and spirituality-bearing sign behavior
- restrained black / earthy brown / deep blue palette memory
- compact sign-compatible figures rather than realism-first anatomy
- field-based symbolic organization rather than scenic depth
- whole-image coherence so every visible part belongs to one Godna sign-world

Translate the scene like this:

[MAIN SUBJECT / MAIN FIGURE] becomes a Godna-built inscribed symbolic form rather than a realistic subject

[SECONDARY FIGURES / ANIMALS / DEITIES] become supporting sign-bearing units translated into the same tattoo-memory grammar

[MOTIF SYSTEM] becomes a repeated coded field using appropriate Godna-style mark families rather than decorative filler

[BACKGROUND / FIELD] becomes a structured sign field that supports repetition, permanence, and inscribed visual order

[COLOR TREATMENT] stays restrained and tattoo-memory-based rather than brightly decorative

[NARRATIVE OR SYMBOLIC TONE] may lean toward mythology, nature, spirituality, identity, protection, or daily-life signification, but must remain structurally Godna

Keep:

- body-to-surface translation memory
- inscribed repetition
- coded motif logic
- restrained permanent color feeling
- symbolic gravity
- Bihar/Mithila adaptation
- whole-field sign coherence

Avoid:

- generic tattoo pattern art
- generic Madhubani without tattoo-memory
- decorative wallpaper effect
- realism-first figures
- bright festive folk-color spread

filler that has no coded meaning
a painted scene with Godna motifs pasted afterward

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Godna painting from Bihar**.

Preserve the source image's subject count, core action, and readable structure, but rebuild the entire image through **tattoo-derived inscribed mark logic**. Replace realism, illustration softness, or generic folk-painting behavior with a field of **repeated symbolic units, controlled line, compact sign-based figures, and restrained tattoo-memory color**. The image must feel as if it has emerged from a tradition where motifs first lived on skin and only later moved into painted form.

If the source image contains figures, convert them into **Godna-style inscribed forms** rather than leaving them as ordinary Madhubani or generic folk figures. If it contains animals, deities, or nature, rebuild them through repeated symbolic structure and mark-based reduction. If it contains background space, turn that space into a Godna sign field rather than leaving it scenic, empty, or filler-driven.

Do not simply darken the palette and add motifs. Do not keep another style's structure underneath. Do not turn the image into generic tattoo-inspired ornament. Rebuild the whole image so it feels as if the source scene originally came from the Bihar Godna tradition: **body-mark-derived, inscribed, identity-bearing, spiritually charged, and motif-structured**.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative **2D + 3D translation** rooted in the visual grammar of **Godna painting from Bihar**, but keep the style source-faithful at its structural core. This must not become generic stylized tattoo design, generic tribal fantasy art, or generic Madhubani with simplified motifs. It should feel like authentic Bihar Godna intelligence expanding into a richer image system while still remaining **inscription-first, sign-unit-driven, body-memory-based, and symbolically restrained**.

Keep the native Godna engine intact: **tattoo-origin memory, identity-bearing marks, repeated symbolic units, compact sign-compatible figures, restrained black / earthy brown / deep blue palette memory, and field-based organization**. Then allow a controlled

creative expansion where the image gains more compositional layering, stronger relation between motif units and larger figures, richer clustering of symbolic forms, and a slightly deeper field structure. Depth may appear only as **layered sign-fields, clustered inscription zones, and controlled symbolic spatial ordering**, never as realism-led atmosphere or scenic illusion.

Figure logic: if figures appear, they must still feel **inscribed and coded**, not naturalistic. Human, deity, and animal forms should remain structurally reduced and mark-compatible. The figure can become richer, but it must still feel built from Godna logic rather than illustrated first and patterned later.

Motif logic: let repeated mark families become more compositionally sophisticated, but keep them **structural**. The motifs must still act like identity-bearing or spirituality-bearing units rather than decorative spread. Repetition should remain deliberate and meaningful.

Color logic: keep the restrained native chromatic memory active. The image can become visually richer, but it must still feel rooted in permanent, spiritually resonant, tattoo-derived color logic rather than decorative abundance.

Space logic: allow the image to gain more layered organization, but keep it as a **sign field**, not a scenic world. The background should still feel like a field of inscription and symbolic order. Even when mythology or daily-life imagery becomes more legible, the work must still be ruled by Godna's sign-system intelligence.

Do not make this into generic tattoo illustration, generic dark folk pattern design, generic Madhubani with a reduced palette, or realism dressed with Godna symbols. The final image must feel like Godna creatively expanded while still remaining true to body-memory, sign repetition, and symbolic permanence.

Reusable Variable Template

Create **[SUBJECT / SCENE]** as a creative **2D + 3D translation** rooted in the visual grammar of **Godna painting from Bihar**.

Preserve these style-core rules:

- tattoo-origin memory remains active
- inscribed mark logic remains primary
- repeated symbolic motif units remain structural
- figures remain sign-compatible rather than realism-first
- restrained black / earthy brown / deep blue memory remains visible
- field-based organization remains stronger than scenic space
- Bihar/Mithila Godna identity remains intact
- whole-image coherence remains one Godna sign-world

Translate the scene like this:

[MAIN SUBJECT / MAIN FIGURE] becomes a richer Godna-built inscribed symbolic focal

form

[SECONDARY FIGURES / ANIMALS / DEITIES] become supporting sign-bearing forms translated into the same inscription system

[MOTIF FIELD] becomes a more layered and compositionally sophisticated repetition system without losing coded meaning

[BACKGROUND / SPACE] becomes a structured symbolic field with clustered sign-zones rather than scenic depth

[COLOR TREATMENT] remains restrained and permanence-linked, even when made richer

[SYMBOLIC OR NARRATIVE TONE] may lean toward mythology, ritual, identity, protection, nature, or daily-life signification while staying structurally Godna

Let these become richer:

motif clustering

figure-to-motif integration

sign-field layering

symbolic density

compositional structure

controlled depth of inscription zones

Keep unchanged:

inscription-first logic

tattoo-memory

coded motif repetition

restrained palette behavior

Bihar/Mithila adaptation

whole-field sign coherence

Avoid:

generic stylized tattoo art

generic Madhubani with darker colors

pattern wallpaper effect

realism-led figures

decorative tribal fantasy drift

scenic worldbuilding

motifs used only as surface ornament

Image-to-Image

Convert this source image into a creative **2D + 3D Godna translation** rooted in the tattoo-derived Bihar/Mithila painting tradition.

Preserve the source image's subject count, main action, pose relationships, and readable composition, but reconstruct all visible forms through **Godna's inscribed sign logic**. The image must no longer behave like ordinary illustration or generic folk painting. Rebuild it

through repeated symbolic units, controlled mark-based line, compact reduced figures, layered sign-field organization, and restrained tattoo-memory color.

If the source image contains figures, transform them into Godna-compatible inscribed forms rather than leaving them in another visual language. If it contains animals, deities, or natural motifs, rebuild them through repeated coded structure and sign-based reduction. If it contains open background space, replace it with a symbolic field of inscribed order rather than scenic emptiness or generic filler.

Do not paste dark motifs onto a normal image. Do not keep another style's structure underneath. Do not make it generic tattoo illustration. Rebuild the whole image so it feels as if the source scene naturally expanded into a richer Bihar Godna sign-world while still preserving tattoo-memory, identity-mark structure, and symbolic permanence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable **full 3D dimensional world** generated from the visual grammar of **Godna painting from Bihar**, but keep the world governed by Godna structure rather than by ordinary realism. This is not a realistic scene with tattoo patterns added later. It is a fully dimensional world in which **tattoo-origin inscription, repeated symbolic motif units, body-memory, identity-mark logic, restrained permanent color, and Bihar/Mithila sign-field behavior** have become reality.

Convert the entire style system into dimensional form without losing its laws. Figures must still feel inscribed and coded rather than ordinary naturalistic people. Animals, deities, and nature forms must still behave like Godna-built symbolic units, not realistic illustration subjects. The world may become spatially convincing, but it must still feel like it belongs to a tradition of permanent body marks translated into painted visual structure.

World logic: the environment must feel built from Godna intelligence. This does not mean literal skin surfaces everywhere. It means every figure, motif, interval, and field of space must still behave like an **inscription-based symbolic world**. Repeated units should remain structurally meaningful. Field organization should remain stronger than scenic illusion. Mythic or daily-life subjects may appear, but they must still be controlled by sign logic, not by realism-first scene-building.

Material and color logic: let marks feel durable, embedded, and spiritually charged. Use restrained black, earthy brown, and deep blue memory as the dominant chromatic field. Allow dimensional richness only if it strengthens the sense of permanence and inscription rather than replacing it with decorative realism.

Do not create generic tribal fantasy, realistic painting with Godna motifs layered on top, generic Madhubani with darker signs, or scenic realism wearing tattoo design. The final

image must feel like a fully dimensional Godna universe: **inscribed, symbolic, restrained, body-memory-driven, and structurally tied to the translation from skin-mark to pictorial field.**

Reusable Variable Template

Create **[SUBJECT / SCENE]** as a believable **full 3D dimensional world** generated from the visual grammar of **Godna painting from Bihar**.

Style system that must remain unchanged:

- tattoo-origin memory remains active
- inscribed sign logic remains primary
- repeated symbolic units remain structural
- body-memory remains visible in the world logic
- restrained black / earthy brown / deep blue palette memory remains dominant
- Bihar/Mithila adaptation remains intact
- field-based symbolic order remains stronger than scenic realism
- the whole frame belongs to one Godna sign-world

Translate the scene like this:

[MAIN SUBJECT / MAIN FIGURE] becomes a fully dimensional Godna-built inscribed focal presence

[SECONDARY FIGURES / ANIMALS / DEITIES] become volumetric but still sign-compatible and coded

[MOTIF FIELD] becomes a dimensional network of repeated symbolic units that still behave structurally, not decoratively

[BACKGROUND / SPACE] becomes a believable but inscription-governed symbolic field rather than atmospheric landscape space

[COLOR TREATMENT] remains restrained, permanent, and spiritually charged

[SYMBOLIC OR NARRATIVE TONE] may lean toward mythology, ritual, identity, protection, nature, or daily-life signification while staying structurally Godna

Increase:

- material presence of marks
- dimensional clustering of symbolic units
- integration of figures and motif field
- depth of sign structure
- world coherence
- inscribed permanence

Do not lose:

- inscription-first logic
- body-memory
- coded repetition
- restrained palette behavior

Bihar/Mithila Godna identity
whole-field sign coherence

Avoid:

generic realism with tattoo overlay
tribal fantasy art
generic dark Madhubani
decorative patterning without coded force
naturalistic figures with Godna surface styling
scenic atmosphere overpowering sign field
one Godna-like object inside a non-Godna world

Image-to-Image

Convert this source image into a believable **full 3D Godna world** generated from the tattoo-derived Bihar/Mithila painting tradition.

Preserve the source image's subject count, core action, and main compositional readability, but rebuild every major element through **Godna's inscription-based sign logic**. Replace realism, generic folk painting, or ordinary illustration behavior with a fully coherent world of repeated symbolic units, embedded mark structure, restrained permanent color, compact sign-compatible figures, and body-memory-driven field organization.

If the source image contains figures, rebuild them as Godna-coded inscribed forms rather than realistic or generic Madhubani figures. If it contains animals, deities, or natural motifs, convert them into structurally repeated symbolic units. If it contains open space, replace that with an inscription-governed field rather than scenic emptiness or atmospheric depth.

Do not merely add Godna motifs to a normal image. Do not keep another style's structure underneath. Do not make it into generic tattoo fantasy. Rebuild the whole image so it feels as if the source scene originally emerged from a fully dimensional Bihar Godna universe: **body-mark-derived, sign-based, permanent-feeling, spiritually charged, and structurally coherent.**
