

Kaavi - Goa

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful visual logic of Kaavi from Goa**. Treat this as an **architectural incised mural tradition**, not as generic red decorative wall art, painted heritage mural, printed ornament, or geometric pattern design. Build the image as if it comes from a real **Kaavi architectural surface** made through **white lime-plastered wall preparation, a maroon-red laterite or red-oxide layer, and incision or etching that cuts through the red layer to reveal the white beneath**.

The image must read **wall-first**. The wall must matter. The surface must feel like an actual built architectural plane, not a flat graphic background. Preserve the sense of **lime-plaster body, red surface layer, incised white reveal, carved linework, and architectural embedding**. The style should feel materially rooted in **lime, red earth, plaster, and incision**, not just “red-and-white ornament.”

Use the native Kaavi motif world: **mythological imagery, Hindu and ritual themes, geometric and floral borders, temple-linked decorative forms, sacred architectural panels, nature-derived motifs, and culturally rooted ornamental fields**. If figures appear, they must behave like **incised wall presences**, not painted characters or miniature-style illustrations. If the image is more geometric, the geometry must still feel etched into the wall rather than drawn on top of it.

Material behavior must preserve **architectural surface truth**: matte lime-plaster presence, maroon-red laterite or red-oxide skin, sharp but handmade incision, white reveal from beneath, and non-industrial wall irregularity. Composition must remain wall-centered and panel-aware. Ornament must remain structural and wall-born.

Do not make this generic temple mural art, painted red-on-white wall graphics, printed decorative panels, heritage wallpaper, or abstract ornament in Kaavi colors. Do not lose the incision logic. Do not lose the lime-plaster and red-layer structure. Do not let motif styling overpower architectural wall truth.

Reusable Variable Template

Create **[SUBJECT / PANEL / WALL FIELD / ARCHITECTURAL SCENE]** in the **authentic source-faithful visual logic of Kaavi from Goa**.

Treat the style as an **architectural incised mural system** built from:

- white lime-plastered surface
- maroon-red laterite or red-oxide surface layer
- incision / etching as the main image-making act
- white reveal from beneath the red layer
- sacred, geometric, floral, mythological, and architectural motif logic
- wall-first composition
- Goa / Konkan architectural grounding

Preserve these non-negotiable style rules:

- the result must feel incised, not painted
- the wall must remain architecturally active
- the red layer must feel separate from the white beneath
- the motifs must feel etched into the surface
- the image must remain panel- and wall-aware
- the whole frame must behave like a Kaavi architectural field

Translate the subject like this:

- **[MAIN PANEL / MAIN FIGURE / MAIN MOTIF FIELD]** becomes the dominant incised Kaavi surface zone
- **[SECONDARY PANELS / SUPPORT MOTIFS / BORDERS / GEOMETRIC OR FLORAL FIELDS]** become subordinate incised wall elements with matching process truth
- **[FIGURES / DEITIES / RITUAL SCENES / ORNAMENTAL SUPPORTS]** become incised white-reveal forms within the red wall layer
- **[SURROUNDING WALL / ARCHITECTURAL CONTEXT]** remains clearly plastered, layered, and surface-born

Keep:

- architectural surface identity
- lime-plaster base
- red laterite / red-oxide layer
- incision / etching logic
- red–white reveal contrast
- Goa / Konkan Kaavi grounding

Avoid:

- painted mural look
- printed ornament
- wallpaper patterning
- generic heritage red graphic
- detached surface design
- motif styling without wall-process truth

Image-to-Image

Convert this source image into the **authentic source-faithful visual logic of Kaavi from Goa**.

Preserve the source image's **main wall relationships, subject hierarchy, panel logic, and overall readability**, but rebuild the entire image as a **Kaavi architectural incised surface system**. Replace ordinary surface behavior with **white lime-plaster base, maroon-red laterite or red-oxide layer, incision-based image formation, and white reveal through etched line and carved surface removal**.

If the source contains figures, ornaments, sacred scenes, geometric forms, or floral structures, rebuild them as **incised Kaavi wall presences** rather than painted illustrations. If the source contains architecture, make the architecture itself part of the style system so the full image feels generated by Kaavi wall intelligence. The final result must feel like the whole source image has been rebuilt through **incised lime-and-red architectural logic**, not like a normal image decorated with red motifs.

Do not simply recolor the source image red and white. Do not add painted borders to an ordinary wall. Do not turn it into generic temple mural styling or ornamental heritage graphics. The final result must feel like a true source-faithful Kaavi wall.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic handcrafted dimensional visual logic of Kaavi from Goa**. Keep the full source grammar intact, but translate it into a richer handcrafted dimensional wall-world. This version must still feel completely **wall-born and incision-born**, not realism-born and not decorative heritage styling.

Preserve the full source grammar: **white lime-plastered architectural base, maroon-red laterite or red-oxide layer, incision / etching as the image-making act, white reveal through the red layer, and sacred-cultural-geometric panel logic**. Then allow the wall to become more tactile, more materially present, and more spatially layered while still remaining unmistakably Kaavi.

The wall must still feel first constructed and then incised. The red layer must still feel like a surface applied over white plaster, not like paint freely brushed onto the wall. The image may gain richer plaster tactility, stronger incision depth, clearer panel structure, and deeper material-light interaction, but it must still remain **incised wall truth first**. If figures or ritual scenes appear, they must still read as incised surface forms rather than realism-based mural painting.

Material behavior should preserve a real plaster body with subtle handmade irregularity, matte red layer, etched white reveal, shallow incision depth, and visible process memory. Ornament must remain structural and integrated into the wall. Composition must still remain wall-centered, panel-led, and process-aware.

Do not make this a decorative 3D heritage wall graphic, faux-kaavi painted plaster art, atmospheric red mural illustration, or realism-first sacred architecture. Do not let dimensionality erase the lime-and-red layer logic or the incision identity.

Reusable Variable Template

Create **[SUBJECT / PANEL / WALL FIELD / ARCHITECTURAL SCENE]** in the **authentic handcrafted dimensional visual logic of Kaavi from Goa**.

Treat the style as an **architectural incised mural system** and translate it into a richer handcrafted dimensional wall-world while preserving these non-negotiable rules:

- the wall still feels like lime-plastered architecture
- the red layer still reads as a separate laterite / red-oxide skin
- incision still remains the main image-making logic
- white reveal still comes from beneath the red layer
- motifs still behave like wall-incised forms, not painted imagery
- the whole image remains architecturally embedded
- the whole frame remains Kaavi-first, not décor-first

Translate the subject like this:

- **[MAIN PANEL / MAIN FIGURE / MAIN MOTIF FIELD]** becomes a richer tactile incised Kaavi zone
- **[SECONDARY PANELS / SUPPORT MOTIFS / BORDERS / GEOMETRIC FIELDS]** become subordinate wall-incised elements with matching material truth
- **[FIGURES / DEITIES / FLORAL OR GEOMETRIC SUPPORTS]** become more tactile but remain incised reveal forms
- **[SURROUNDING WALL / ARCHITECTURAL CONTEXT]** becomes a dimensional lime-plastered surface with clear red-layer memory

Let these become richer:

- plaster tactility
- incised edge depth
- surface-layer separation
- panel hierarchy
- tool-mark subtlety
- wall thickness and relief feel

Keep unchanged:

- architectural wall identity
- lime-plaster base
- red layer
- incision logic
- red–white reveal system
- Goa / Konkan Kaavi grounding

Avoid:

- painted faux-incision
- decorative heritage wall render
- printed red ornament
- atmospheric mural illustration
- realism-first wall painting
- motif styling without material process

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional visual logic of Kaavi from Goa**.

Preserve the source image's **main wall relationships, panel logic, subject hierarchy, and readability**, but rebuild the full image through a **dimensional Kaavi wall system**. Replace ordinary material behavior with **white lime-plaster base, maroon-red laterite or red-oxide skin, incision-based white reveal, etched line systems, and shallow wall-relief process memory**.

Allow the image to gain richer tactile wall presence, stronger incision depth, more visible plaster thickness, and more dimensional architectural embedding than the source-faithful version, but keep the style fully wall-first. Every figure, border, floral form, geometric field, and sacred motif must still feel like a Kaavi incised wall presence rather than painted mural imagery.

Do not texture-map red plaster and white linework onto a normal wall. Do not turn the scene into decorative heritage illustration or faux-kaavi ornament. The final result must feel like the source image has been rebuilt through a handcrafted dimensional Kaavi wall intelligence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic translation of Kaavi from Goa**. Convert the complete source grammar into a believable three-dimensional wall-world while keeping **Kaavi incision intelligence** in control. This must not become generic heritage architecture, red decorative mural realism, or temple-wall fantasy. It must feel like a **Kaavi architectural wall-world became real**.

Keep the full source grammar intact: **white lime-plaster architectural base, maroon-red laterite or red-oxide layer, incision / etching as the main image-making act, white reveal from beneath the red layer, sacred-cultural-geometric panel logic, and Goa / Konkani architectural grounding**. Then translate that grammar into full volume: stronger wall depth, richer spatial staging, clearer figure-ground separation where needed, deeper architectural coherence, and cinematic readability — but only under the authority of the incised wall system.

Preserve the origin-material memory. By default, render the world as if it grows directly out of **lime plaster, a red laterite / red-oxide layer, incised removal, white reveal, shallow etched depth, and real architectural wall thickness**. Even in full 3D, the world must still visibly remember **lime, red earth, and incision**. The result must not become smooth CGI red plaster, painted heritage décor, fantasy temple architecture, or generic red-and-white mural realism. It must still feel like a **process-born incised architectural world**.

The wall must still govern the scene. Figures, mythological forms, borders, geometric fields, floral systems, and sacred panels must still behave as **Kaavi wall presences**, not as ordinary realistic decorations. The world must not merely host the style; the world must feel generated by the style's incised architectural intelligence.

Do not create generic heritage-wall realism, painted temple-wall styling, red ornamental architecture, glossy plaster spectacle, or ordinary realism with Kaavi decoration added later. Do not let polish replace incision. Do not erase lime-plaster and red-layer ancestry. Do not let environment overpower the wall.

Reusable Variable Template

Create **[SUBJECT / WALL WORLD / PANEL / ARCHITECTURAL SCENE]** as a **fully volumetric cinematic translation of Kaavi from Goa**.

Treat the style as an **architectural incised mural system** and translate it into a believable three-dimensional world without losing these non-negotiable rules:

- the wall still feels like real architecture
- lime-plaster base remains active in the final image
- the red layer still reads as a separate surface skin
- incision remains the core image-making logic
- white reveal still comes from beneath the red layer
- motifs still behave like wall-incised presences

- the whole frame remains governed by Kaavi wall intelligence

Material-origin rule:

- default to **lime plaster + red laterite / red-oxide layer + incision origin memory**
- preserve plaster body, red surface layer, etched removal, white reveal, shallow incised depth, and architectural wall thickness
- keep the surface matte, tactile, process-born, and non-industrial
- even in full 3D, the world must still feel **born from incised wall-making**, not from decorative styling or fantasy set design

Translate the subject like this:

- **[MAIN PANEL / MAIN FIGURE / MAIN MOTIF FIELD]** becomes the dominant volumetric Kaavi wall presence
- **[SECONDARY PANELS / SUPPORT MOTIFS / GEOMETRIC OR FLORAL ELEMENTS]** become subordinate incised wall forms with matching process-born logic
- **[FIGURES / SACRED FORMS / RITUAL ELEMENTS]** become etched reveal presences inside the wall system
- **[ARCHITECTURE / SUPPORT SPACE]** becomes a cinematic but still wall-governed Kaavi world

Increase:

- wall volume and thickness
- figure-ground separation where needed
- plaster-light interaction
- incised depth and clarity
- spatial readability
- world-scale architectural coherence

Do not lose:

- architectural wall identity
- lime-plaster base
- red layer
- incision logic
- white reveal truth
- Goa / Konkan grounding
- process-memory stronger than décor

Avoid:

- generic heritage realism
- painted red wall decoration
- glossy red plaster styling
- fantasy temple-wall environment
- smooth CGI wall treatment

- realism overpowering incised-wall truth

Image-to-Image

Convert this source image into a **fully volumetric cinematic translation of Kaavi from Goa**.

Preserve the source image's **main wall relationships, panel hierarchy, subject logic, and scene readability**, but rebuild the entire frame as if **Kaavi grammar became a cinematic three-dimensional world**. Replace ordinary surface and architectural logic with **white lime-plaster base, maroon-red laterite or red-oxide layer, incision-based white reveal, etched depth, plaster thickness, and Goa Kaavi wall intelligence**.

Then expand that structure into full volume: stronger wall mass, richer incision relief, clearer spatial staging, deeper material-light interaction, and fuller architectural-world completion. But every part of the frame must still obey Kaavi law. The wall must remain wall-first. The surface must still feel process-born. The world must still read as an incised architectural world made real, not as ordinary realism with red heritage ornament added later.

Do not simply recolor the source image red and white. Do not add etched-looking lines to a normal wall. Do not make it fantasy heritage cinema or painted mural styling. Do not lose the origin-material memory of **lime plaster, red surface layer, and incised reveal logic**.

The final image must feel like the source image has been fully rebuilt through **fully volumetric Kaavi intelligence with process-memory, wall-truth, and Goa architectural meaning all intact**.
