

Karepa (Mother-of-Pearl) - Goa

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful visual logic of Karepa / Mother-of-Pearl Shell Windows from Goa**. Treat this as a **Goan architectural shell-window craft**, not as generic shell décor, nacre ornament, shell inlay, stained-glass imitation, or heritage decoration. Build the image as if it belongs to a real Goan architectural opening where **translucent mother-of-pearl or oyster shell panes are used in place of glass inside a wooden or built window structure**.

The image must read **window-first**. The opening must matter. The shell must function as a pane, not as decoration glued to a surface. Preserve the sense of **frame, lattice or pane subdivision, thin translucent shell inserts, muted pearly surface, filtered privacy, and softened interior light**. The style should feel materially rooted in **shell-as-window material**, not just “coastal and elegant.”

Use the native Karepa world: **architectural windows, shutters, shell-pane openings, heritage interiors, church or old-house light fields, and pane-based shell filtering**. If a person appears, that person must remain secondary to the shell-window effect and exist mainly to reveal **light quality, privacy, and spatial threshold**. The shell panes must not behave like clear glass. They must not behave like opaque wall panels. They must read as **translucent shell replacing glass**.

Material behavior must preserve **real shell-pane truth**: thin, pearly, muted, softly luminous shell surfaces inside a real window frame. Composition must remain **opening-centered, pane-centered, and light-filter-centered**. Ornament must remain structural and born from pane arrangement, not applied later as shell decoration.

Do not make this generic pearly window styling, frosted glass, stained-glass look, shell-themed heritage décor, or shell mood added to an ordinary window. Do not lose shell-in-place-of-glass logic. Do not lose window function. Do not let atmosphere overpower pane truth.

Reusable Variable Template

Create [SUBJECT / WINDOW / OPENING / INTERIOR-EXTERIOR THRESHOLD] in the **authentic source-faithful visual logic of Karepa / Mother-of-Pearl Shell Windows from Goa**.

Treat the style as an **architectural shell-window system** built from:

- mother-of-pearl / oyster / kapiz shell pane identity
- shell used in place of glass
- wooden or built frame structure
- pane or lattice subdivision
- translucent filtered light
- privacy-preserving shell opacity
- Goa heritage architectural grounding

Preserve these non-negotiable style rules:

- the result must feel like a real shell window, not shell decoration
- the shell must function as the pane
- the frame and pane relationship must remain visible
- the shell must remain translucent, not transparent and not opaque
- the window must remain stronger than the scene around it
- the whole image must behave like a Goan shell-window field

Translate the subject like this:

- **[MAIN WINDOW / MAIN OPENING / MAIN FRAME]** becomes the dominant Karepa shell-window presence
- **[SECONDARY PANES / SHUTTERS / SUPPORT FRAMES / SURROUNDING WALL]** become subordinate architectural supports for shell-pane truth
- **[LIGHT EFFECT]** becomes soft filtered glow, privacy diffusion, and shell-mediated illumination
- **[FIGURES / INTERIOR ELEMENTS / EXTERIOR HINTS]** remain secondary and only support the reading of the shell-window system

Keep:

- shell replacing glass
- architectural opening identity
- pane-and-frame logic
- translucent shell truth
- filtered light behavior
- Goa heritage grounding

Avoid:

- generic shell décor
- frosted glass
- stained glass imitation
- pearly ornament panel
- decorative shell mood without window function
- atmosphere overpowering shell-pane truth

Image-to-Image

Convert this source image into the **authentic source-faithful visual logic of Karepa / Mother-of-Pearl Shell Windows from Goa**.

Preserve the source image's **main opening relationships, window position, frame logic, subject hierarchy, and overall readability**, but rebuild the image as a **Goan shell-window architectural system**. Replace ordinary glazing or ordinary opening behavior with **mother-of-pearl / oyster / kapiz shell panes fitted into a real frame, shell used in place of glass, muted translucency, privacy-filtering opacity, and softened interior light**.

If the source includes a window, rebuild it as a true Karepa window. If the source includes people, interiors, or exterior glimpses, they must remain secondary to the shell-pane logic. If the source contains clear glass, remove that behavior and replace it with **shell-mediated light**, not direct transparency. The final result must feel like the whole image has been rebuilt through **Goan shell-window intelligence**, not like shell styling has been added afterward.

Do not simply make the window pearly. Do not add shell texture to glass. Do not turn it into generic heritage-window décor or luxury nacre design. The final result must feel like a true source-faithful Karepa shell-window world.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic handcrafted dimensional visual logic of Karepa / Mother-of-Pearl Shell Windows from Goa**. Keep the full source grammar intact, but translate it into a richer handcrafted dimensional architectural window-world. This version must still feel completely **shell-window-born**, not realism-born and not decorative heritage styling.

Preserve the full source grammar: **shell used in place of glass, mother-of-pearl / oyster / kapiz pane identity, wooden or built frame structure, pane segmentation, translucency, privacy, and soft filtered light**. Then allow the window to become more tactile, more materially present, and more spatially layered while still remaining unmistakably Karepa.

The opening must still feel first built as a real window. The shell must still feel like pane material, not ornament. The image may gain richer frame depth, stronger pane-edge clarity, more visible shell thickness, more nuanced light diffusion, and deeper material-light interaction, but it must still remain **window-and-light truth first**.

Material behavior should preserve a muted pearly shell body with subtle handmade irregularity, restrained iridescence, filtered glow, and visible shell-pane structure inside a real frame. Composition must remain **opening-centered, pane-led, and light-mediated**.

Do not make this decorative shell-luxury window styling, frosted heritage glazing, atmosphere-first old-house image, or realism-first architecture with shell mood added later. Do not let dimensionality erase shell-pane truth or filtered-light function.

Reusable Variable Template

Create **[SUBJECT / WINDOW / OPENING / INTERIOR-EXTERIOR THRESHOLD]** in the authentic handcrafted dimensional visual logic of Karepa / Mother-of-Pearl Shell Windows from Goa.

Treat the style as an **architectural shell-window system** and translate it into a richer handcrafted dimensional world while preserving these non-negotiable rules:

- the opening still feels like a real window
- the shell still functions as pane material
- pane-and-frame integration remains primary
- translucency still remains softer than glass transparency
- filtered-light behavior still stays active
- the whole image remains window-first, not décor-first

Translate the subject like this:

- **[MAIN WINDOW / MAIN OPENING / MAIN FRAME]** becomes a richer tactile Karepa shell-window presence
- **[SECONDARY PANES / SHUTTERS / SURROUNDING FRAME / WALL SUPPORTS]** become subordinate architectural supports with matching process truth
- **[LIGHT EFFECT]** becomes dimensional shell-glow, privacy diffusion, softened luminous filtering, and interior atmospheric modulation
- **[FIGURES / INTERIOR ELEMENTS / EXTERIOR ELEMENTS]** remain secondary and only support shell-window readability

Let these become richer:

- shell-pane tactility
- frame depth
- pane thickness legibility
- shell-light interaction
- filtered glow quality
- threshold atmosphere

Keep unchanged:

- shell replacing glass
- architectural opening identity
- translucent pane truth
- pane-and-frame structure
- Goan heritage shell-window grounding

Avoid:

- frosted-glass styling
- stained-glass mood
- decorative nacre window luxury
- shell ornament panel logic
- atmosphere-first heritage render
- shell mood without window function

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional visual logic of Karepa / Mother-of-Pearl Shell Windows from Goa**.

Preserve the source image's **main opening relationships, frame logic, subject hierarchy, and readability**, but rebuild the full image through a **dimensional Goan shell-window system**. Replace ordinary glazing and ordinary opening behavior with **mother-of-pearl / oyster / kapiz shell pane truth, shell replacing glass, pane segmentation, framed shell translucency, privacy-filtering opacity, and softened interior glow**.

Allow the image to gain richer frame depth, stronger pane clarity, more visible shell material tactility, and more dimensional threshold presence than the source-faithful version, but keep the style fully window-first. Every pane, frame, shutter, light effect, and interior glow must still feel like Karepa rather than a decorative heritage window with shell styling.

Do not simply pearlize a window. Do not texture-map shell onto glass. Do not turn it into generic old-Goa décor or luxury nacre glazing. The final result must feel like the source image has been rebuilt through a handcrafted dimensional Karepa intelligence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic translation of Karepa / Mother-of-Pearl Shell Windows from Goa**. Convert the complete source grammar into a believable three-dimensional shell-window world while keeping **Karepa window intelligence** in control.

This must not become generic heritage-window realism, frosted-glass architecture, or pearly shell décor styling. It must feel like **a Goan shell-window world became real**.

Keep the full source grammar intact: **mother-of-pearl / oyster / kapiz shell pane identity, shell used in place of glass, real architectural opening, frame-and-pane integration, privacy-filtering translucency, and soft filtered interior light**. Then translate that grammar into full volume: stronger window depth, richer threshold staging, clearer interior-exterior separation, deeper shell-light coherence, and cinematic readability — but only under the authority of the shell-window system.

Preserve the origin-material memory. By default, render the world as if it grows directly out of **thin translucent shell panes, muted pearly surface, pane fitting into wooden lattice or frame, shell replacing glass, reduced visibility, soft yellowish or subdued shell-filtered light, and architectural threshold behavior**. Even in full 3D, the world must still visibly remember **pane, frame, privacy, and filtered light**. The result must not become frosted glass, acrylic glazing, glossy nacre décor, or generic heritage realism.

The window must still govern the scene. Interior light, exterior hints, wall thickness, shutters, and surrounding architecture must still behave as **supports for shell-pane truth**, not as ordinary realistic setting with pearly decoration added later. The world must not merely host the style; the world must feel generated by the style's shell-window intelligence.

Do not create generic colonial-window realism, stained-glass-like effects, decorative nacre architecture, or atmosphere-first heritage imagery. Do not let glow replace shell-pane truth. Do not erase shell-in-place-of-glass logic. Do not let environment overpower the opening.

Reusable Variable Template

Create **[SUBJECT / WINDOW WORLD / OPENING / INTERIOR-EXTERIOR THRESHOLD]** as a **fully volumetric cinematic translation of Karepa / Mother-of-Pearl Shell Windows from Goa**.

Treat the style as an **architectural shell-window system** and translate it into a believable three-dimensional world without losing these non-negotiable rules:

- the opening still feels like a real window
- shell still functions in place of glass
- pane-and-frame logic remains active in the final image
- translucency remains softer than clear glazing
- privacy and filtered-light behavior remain visible
- the window remains stronger than the environment around it
- the whole frame remains governed by shell-window intelligence

Material-origin rule:

- default to **shell-pane + frame + filtered-light origin memory**

- preserve thin translucent shell panes, muted pearly surface, pane fitting, wooden or built frame logic, reduced transparency, and softened light diffusion
- keep the shell tactile, process-born, and clearly not glass
- even in full 3D, the world must still feel **born from shell replacing glass**, not from decorative nacre styling

Translate the subject like this:

- **[MAIN WINDOW / MAIN OPENING / MAIN FRAME]** becomes the dominant volumetric Karepa shell-window presence
- **[SECONDARY PANES / SHUTTERS / FRAME SUPPORTS / WALL STRUCTURE]** become subordinate architectural supports with matching process-born logic
- **[LIGHT EFFECT]** becomes volumetric filtered glow, privacy-preserving translucency, and shell-mediated interior illumination
- **[INTERIOR / EXTERIOR / FIGURES]** remain secondary and only support the shell-window reading

Increase:

- window depth and threshold volume
- figure-ground separation where needed
- shell-light interaction
- pane thickness legibility
- spatial readability
- world-scale shell-window coherence

Do not lose:

- shell replacing glass
- architectural opening identity
- pane-and-frame integration
- translucent shell truth
- filtered-light function
- Goan heritage grounding
- process-memory stronger than décor styling

Avoid:

- generic heritage-window realism
- frosted-glass look
- stained-glass mood
- decorative nacre luxury
- atmosphere overpowering shell-window truth
- pearly styling without pane function

Image-to-Image

Convert this source image into a **fully volumetric cinematic translation of Karepa / Mother-of-Pearl Shell Windows from Goa.**

Preserve the source image's **main opening relationships, frame structure, subject hierarchy, and scene readability**, but rebuild the entire frame as if **Karepa grammar became a cinematic three-dimensional world**. Replace ordinary glazing and ordinary window logic with **mother-of-pearl / oyster / kapiz shell panes, shell replacing glass, pane fitting into a real frame, privacy-filtering translucency, reduced transparency, and softened shell-mediated light**.

Then expand that structure into full volume: stronger threshold mass, richer pane depth, clearer spatial staging, deeper shell-light interaction, and fuller architectural-world completion. But every part of the frame must still obey Karepa law. The opening must remain window-first. The shell must still feel pane-born. The world must still read as a shell-window world made real, not as ordinary realism with pearly heritage styling added later.

Do not simply make the glazing pearly. Do not add shell texture to a normal window. Do not make it frosted-glass realism or decorative nacre architecture. Do not lose the origin-material memory of **shell replacing glass, pane-and-frame integration, and filtered-light truth**.

The final result must feel like the source image has been fully rebuilt through **fully volumetric Karepa intelligence with process-memory, window-truth, and Goan shell-light meaning all intact**.
