

Sitalpati - Assam

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of the Sitalpati craft tradition of Assam. Treat this as a murta-cane cool-mat weaving system, not as generic cane craft, not as bamboo basketry, not as cloth-textile design, and not as decorative woven wall art.

Build the image as if it comes from an actual Sitalpati making world where murta cane is processed into fine slips and woven into a smooth, cool, flat household mat. The object must read first as a cool mat with real domestic use, not as a random natural-fiber surface. Preserve mat identity, panel flatness, strip-built construction, and household object presence.

Use real material logic: fine prepared murta slips, smooth hand-finished woven surface, flat interlaced panel structure, controlled edge containment, and tactile cooling-surface character. The weave should feel built through strip interlacing, generally twill or check based, not through printing, painting, or stitched embroidery. Any design or motif must feel woven into the surface itself, not placed on top of it.

Color logic must remain craft-bound. Use natural cane tones and indigenous dyed-cane effects where appropriate, including pale ivory-white, black, red, and related cane-based tonal variation, but keep the result material and process-based rather than graphic or synthetic. The color must feel like treated woven slips, not like digitally colored decoration.

If pattern or named designs appear, such as floral, creeper, geometric, bird, tree, or other traditional woven motifs, they must still behave like woven panel designs emerging from slip structure, not free illustration. The whole image must feel like a finished murta-cane mat object made for touch, use, and household life.

Do not make it generic cane décor. Do not make it a basket. Do not make it a cloth. Do not make it a printed mat. Do not turn it into a wall panel with craft texture. Do not let one patch of woven surface carry the style while the rest becomes generic rustic realism.

Reusable Variable Template

Create [SUBJECT / OBJECT / PANEL / SCENE] in the authentic visual logic of the Sitalpati craft tradition of Assam.

Treat the style as a murta-cane cool-mat weaving system, not as generic natural-fiber decoration.

Core style system to preserve:

cool-mat object identity

murta-cane slip construction

flat woven panel logic

smooth tactile cooling surface

twill/check interlaced ordering

processed and refined slip precision

indigenous cane-color treatment

whole-frame consistency so every visible element belongs to the same Sitalpati object world

Translate the image like this:

[MAIN OBJECT / MAIN SURFACE] becomes a flat woven murta-cane mat field with real strip-built structure

[SECONDARY PANELS / DETAILS] obey the same interlaced panel logic

[EDGES / BORDERS / CORNERS] become finished and contained mat edges rather than cloth hems or basket rims

[PATTERN / DESIGN ZONES] emerge through woven slip logic rather than printed decoration

[ENVIRONMENT / SUPPORTING SPACE] supports household-use objecthood instead of generic décor atmosphere

Keep:

panel flatness

prepared slip precision

smooth cooling-surface tactility

woven structural plausibility

household-use presence

mat-first identity

Avoid:

basket logic

cloth logic

generic cane texture

painted ornament over reed background

printed patterns

decorative rustic mood without cool-mat objecthood

Image-to-Image

Convert this source image into the authentic visual world of the Sitalpati craft tradition of Assam.

Preserve the source image's main object relationships, overall composition, and readability, but rebuild the entire image through Sitalpati cool-mat logic. Replace generic surfaces with flat woven murta-cane panel structure. Replace rough raw cane with fine prepared slips.

Replace cloth or basket behavior with smooth interlaced mat behavior. Replace decorative pattern with woven design that emerges from strip logic.

If the source image contains an object or panel, convert it into a real murta-cane mat field with twill/check woven order, refined slip sizing, finished edges, and cool tactile surface identity. If designs appear, make them structurally woven into the mat, not painted or printed on top. If surrounding space is visible, make it support the object's household-use presence instead of generic rustic décor.

Retain material memory: processed murta slips, smooth flat woven surface, indigenous cane-color treatment, tactile cool-mat presence, and contained panel identity. The final result must feel like a real Sitalpati household mat object, not like a generic cane texture pasted onto another form.

Do not turn it into a basket, cane tray, wallpaper panel, or cloth-like weave. Do not add decorative motifs without interlaced logic. Rebuild the full image so it feels born from Sitalpati mat grammar.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image-world rooted in the Sitalpati craft tradition of Assam. Treat this as a murta-cane cool-mat weaving system expanded into a richer visual language, not as generic craft décor, not as basket design, and not as decorative cane patterning.

Keep the style source-rooted: fine prepared murta slips, flat woven panel identity, twill/check structural rhythm, smooth cooling surface, household-use objecthood, and woven designs that remain interlaced rather than illustrated. The style must still feel mat-born. Do not let visual richness replace flat panel logic.

Allow the image to become more visually articulated while preserving Sitalpati's native structure. Strip rhythm may organize wider parts of the frame. Panel divisions may become more compositionally active. Traditional woven design names such as floral creepers, geometric zones, birds, trees, or other recognized woven motifs may appear, but only as interlaced mat-surface design. Let the surface become richer, but keep every important mark woven into panel logic.

Material behavior must remain specific: refined murta-cane surface, smooth cool touch, subtle cane flexibility, matte natural-fiber presence, and indigenous dyed-slip coloration where needed. The world should feel like the intelligence of a Sitalpati mat is expanding into a broader 2D + 3D surface-ordered reality while still staying household-scaled and object-rooted.

The whole frame must still feel authored by Sitalpati logic. Surfaces, panel breaks, edge decisions, objects, and environment should inherit mat intelligence rather than generic décor realism.

Do not make it luxury craft styling. Do not make it woven wallpaper. Do not make it a basket or a cloth. Do not let motifs become free illustration. Do not reduce the style to “natural-fiber handmade mood.”

Reusable Variable Template

Create [SUBJECT / OBJECT / PANEL / SCENE] as a creative 2D + 3D translation rooted in the Sitalpati craft tradition of Assam.

Preserve these style-core rules:

murta-cane slip construction remains primary

cool-mat identity stays active

flat woven panel logic remains visible

twill/check interlaced rhythm stays structural

designs remain woven, not painted

surface stays smooth, tactile, and household-object rooted

the whole frame remains inside one Sitalpati object world

Translate the image like this:

[MAIN PANEL / MAIN OBJECT] becomes a richer Sitalpati woven surface with real strip order

[SECONDARY ELEMENTS] also inherit panel flatness and slip-built logic

[EDGE / BORDER / CORNER AREAS] become finished mat structure, not basket or cloth edges

[DESIGN ZONES] become interlaced woven motifs with real panel discipline

[ENVIRONMENT / SUPPORTING SPACE] becomes organized by flat woven surface intelligence rather than generic realism

Let these become richer:

surface layering

panel hierarchy

strip rhythm visibility

design articulation

2D + 3D woven object-world depth

Keep unchanged:

mat-first identity

murta specificity

flat panel order

cool tactile presence

household-use object logic

Avoid:

basket volume

fabric drape

graphic pattern overlays

luxury décor styling

illustrated motifs on reed texture

generic handmade natural-fiber atmosphere

Image-to-Image

Convert this source image into a creative 2D + 3D Sitalpati translation from Assam.

Preserve the source image's main object structure, composition, and readability, but reconstruct the full image through Sitalpati cool-mat grammar. Replace ordinary surfaces with interlaced murta-cane panel construction. Replace rough or generic cane appearance with refined prepared-slip precision. Replace decorative motifs with woven design logic. Replace basket or fabric behavior with flat smooth mat identity.

Allow the image to become more spatial and visually rich than a simple documentary mat view, but keep every visible element rooted in Sitalpati object intelligence. The main field, panel edges, secondary divisions, and design areas should all feel generated through flat woven mat logic. The result should still read as household-use craft, not gallery décor or cane styling.

Retain material memory: smooth woven murta surface, cool tactile presence, indigenous dyed-slip treatment where needed, contained mat edges, and process-based woven plausibility. The final image should feel like Sitalpati panel intelligence has expanded into a richer object-world without losing mat identity.

Do not paste reed texture behind another image. Do not make the object basket-like or cloth-like. Do not convert woven motifs into loose illustration. Rebuild the full image so it feels authored by Sitalpati mat grammar.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the Sitalpati craft tradition of Assam. Treat this as a murta-cane cool-mat weaving system translated into reality, not as generic cane décor, not as basket craft, and not as decorative surface styling.

The realism must remain fully governed by Sitalpati mat grammar. Build the world through processed murta slips, flat woven panel logic, smooth cooling-surface identity, finished edge containment, twill/check interlaced structure, indigenous dyed-cane treatment, and

household-use object presence. The object must still read as a cool mat or mat-derived form first.

Every important surface must feel genuinely built from fine prepared cane slips: precise, interlaced, smooth, tactile, panel-based, and functionally believable. Even in full dimensional translation, flatness must still matter. The object cannot drift into basket volume, soft textile drape, or generic natural-fiber furniture language.

If designs are present, they must still emerge from woven structure. Floral, bird, tree, geometric, or named traditional motifs must remain interlaced and mat-bound rather than becoming painted ornament or printed decoration. The world should feel like Sitalpati surface intelligence became a complete dimensional reality while preserving household use, object clarity, and mat-first identity.

Extend the grammar to the whole frame. Objects, surfaces, interiors, edges, and supporting spaces must all inherit Sitalpati panel intelligence where appropriate: flatness, strip rhythm, woven zoning, tactile cane smoothness, and contained object logic.

Do not make it a basket. Do not make it a cane furniture showroom. Do not make it rustic eco-décor. Do not make it cloth-like. Do not let one mat-texture patch carry the whole style while the rest becomes generic realism.

Reusable Variable Template

Create [SUBJECT / OBJECT / SCENE / WORLD TYPE] as a full 3D realistic dimensional world generated from the Sitalpati craft tradition of Assam.

Style system that must remain unchanged:

- cool-mat object identity
- murta slip-built construction
- flat woven panel logic
- smooth tactile cooling surface
- twill/check strip rhythm
- indigenous cane-color treatment
- finished edge containment
- whole-frame Sitalpati consistency

Translate the world like this:

[MAIN OBJECT / MAIN PANEL] becomes a fully dimensional Sitalpati woven mat presence
[SECONDARY SURFACES / OBJECTS] become volumetric but still panel-governed and mat-rooted

[EDGES / CORNERS / BOUNDARIES] behave like contained mat construction, not basket rims or cloth hems

[DESIGN AREAS] emerge through interlaced woven structure

[ENVIRONMENT] becomes a believable spatial field organized by mat intelligence rather than generic rustic realism

Increase:

believable dimensional depth
light on prepared cane slips
surface tactility
woven panel presence
whole-object realism
household object coherence

Do not lose:

mat-first identity
murta specificity
flatness inside volume
woven structural plausibility
cool tactile function
domestic-use objecthood

Avoid:

basket craft drift
cloth logic
decorative reed wallpaper
luxury cane décor
painted motifs on textured background
generic natural-fiber realism

Image-to-Image

Convert this source image into a full 3D realistic Sitalpati world from Assam.

Preserve the source image's main structure, object relationships, and readability, but rebuild all visible surfaces through Sitalpati cool-mat grammar. Replace generic material with fine processed murta-cane slips. Replace ordinary woven texture with interlaced flat panel order. Replace basket-like or textile-like behavior with smooth contained mat logic. Replace decorative imagery with woven design that emerges from strip structure.

Extend the style beyond one patch of surface. Main object, secondary surfaces, edges, and surrounding spatial cues must all feel generated by Sitalpati panel intelligence. The final world should read as if the craft of a cool murta mat has become dimensional reality while preserving smoothness, cooling function, woven precision, and domestic object use.

Retain material memory: prepared slips, twill/check order, indigenous dyed-cane tones where needed, tactile cool-surface character, and household-use object presence. Keep the object mat-first even in realism.

Do not paste cane texture over another design. Do not turn it into basketry, furniture décor, or cloth weave. Do not let the dimensionality erase flat panel logic. Rebuild the full image so the world itself feels authored by Sitalpati grammar.
