

Chikankari - Uttar Pradesh

- if translated beyond embroidery

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **pure authentic source-truth visual logic of Chikankari from Uttar Pradesh**, treating it as a **Lucknow-rooted hand embroidery system** built through **chapayi–tanka–dhulayi process memory, fine needle embroidery, miniature and even stitch behavior, whitework-derived delicacy, floral-and-Mughal-architecture motif logic, and garment-surface textile refinement**.

Build the image as if it genuinely belongs inside the native chikankari craft world itself. The image must be governed first by **cloth-surface identity, printed-guide embroidery order, fine stitched surface development, wash-softened refinement, and Lucknow elegance**, not by generic embroidery, machine lace, printed floral fabric, decorative fashion embellishment, or realism-first textile styling.

The support must feel like real cloth, not paper, not wall, not a flat graphic surface. The embroidery must feel built into the fabric through hand needlework, not laid on top as applique, not simulated through print, and not reduced to surface pattern only. The thread must feel fine, delicate, miniature, and even. The motifs must feel generated through embroidery intelligence rather than illustration logic.

Preserve the memory of **white-on-white delicacy** even when color variation is allowed. The image should privilege tonal softness, thread-shadow subtlety, and refined relief rather than loud contrast. The embroidery must feel guided, measured, and rhythmically distributed, as if it came through chapayi planning and then hand-worked tanka before dhulayi softened and finished the cloth.

The motif world must remain **ornamental, botanical, and Mughal-architecture influenced**: flowers, creepers, petals, paisleys, repeating refined surface spreads, and garment-aware embroidery placement. The design must feel suited to kurta panels, sleeves, dupatta fields, saree zones, or other drape-aware textile surfaces rather than behaving like framed picture art.

Do not make this generic embroidery, printed floral fabric pretending to be embroidery, lace-like machine texture, heavy ornamental stitch work, sequined festive surface, or fashion-first embellishment with chikankari motifs pasted later. The final result must feel like **the real chikankari system itself made the whole image**.

Reusable Variable Template

Create **[SUBJECT / EMBROIDERED TEXTILE SURFACE / GARMENT FIELD / LUCKNOW STITCHED CLOTH IMAGE]** in the **pure authentic source-truth visual logic of Chikankari from Uttar Pradesh.**

Style system that must remain unchanged:

- cloth-surface identity
- chapayi–tanka–dhulayi process memory
- miniature and even stitch behavior
- whitework-derived delicacy
- thread-raised textile texture
- floral-and-Mughal-architecture motif logic
- garment-surface grace
- whole-frame chikankari consistency

Translate the image like this:

- **[MAIN CLOTH FIELD / MAIN GARMENT ZONE / MAIN SURFACE AREA]** becomes a chikankari-built textile presence governed by stitch rhythm and cloth refinement
- **[MOTIFS / FLOWERS / CREEPERS / PAISLEYS / ARCHITECTURAL ORNAMENT FORMS]** must feel embroidery-born, not printed or drawn
- **[THREAD BEHAVIOR / RAISED AREAS / FINE TEXTURE / TONAL DIFFERENCE]** must feel subtle, miniature, even, and hand-built
- **[CLOTH / DRAPE / FABRIC SUPPORT]** must feel soft, wearable, and integrated with the embroidery
- **[SURFACE DISTRIBUTION / BORDERS / PANELS / SLEEVES / DUPATTA OR SAREE ZONES]** must feel garment-aware and compositionally planned
- **[IF FIGURES / OBJECTS / ARCHITECTURE APPEAR]** faces, bodies, posture, object logic, and environment logic must all be reorganized through chikankari stitched textile order, not realism

Keep:

- stitched cloth identity
- guide-based motif order
- miniature stitch rhythm
- wash-softened refinement
- tonal restraint
- whitework memory
- Lucknow elegance
- whole-frame consistency

Avoid:

- generic embroidery

- machine lace feel
- printed fabric logic
- bold graphic patterning
- heavy sparkle or sequins dominating
- realism-first surface rendering
- generic fashion ornament
- realism with chikankari accents added later

The final result must feel like a true Lucknow embroidered textile system, not a floral fabric design wearing chikankari cues.

Image-to-Image

Convert this source image into the **pure authentic source-truth visual logic of Chikankari from Uttar Pradesh**.

Preserve the source image's **subject count, core action, main relationships, and readability**, but rebuild the full image through chikankari grammar. Replace generic surface decoration with cloth-integrated stitch construction. Replace graphic patterning with miniature embroidered rhythm. Replace loud contrast with whitework-derived tonal restraint. Replace casual motif scatter with chapayi-guided distribution. Replace raw surface appearance with dhulayi-softened finish.

If the image includes motifs, make them feel thread-built and embroidery-native. If the image includes fabric zones, make them behave like real garment or draped cloth surfaces. If the image includes figures, objects, or environment, they must also be reorganized through chikankari's stitched textile intelligence rather than remain generic under an embroidered overlay.

Do not simply add floral embroidery to the source image. Do not keep realism or print logic underneath. Do not let the texture behave like lace, applique, or surface graphic design. The final result must feel as if the original image has been fully reauthored inside the true source-truth chikankari system.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **creative artisan translation of Chikankari from Uttar Pradesh**, preserving the same deep source grammar as the authentic source-truth version, but

translating it into a **richer, more imaginative, more dimensional 2D + 3D hybrid visual system**.

Keep the core chikankari grammar fully unchanged: cloth-surface identity, chapayi–tanka–dhulayi process memory, miniature and even stitch behavior, whitework-derived delicacy, floral-and-Mughal-architecture motif logic, thread-raised textile texture, and Lucknow refinement. Do not turn this into luxury couture embroidery, lace styling, printed textile concept art, decorative fashion surface design, or realism with delicate embroidery layered on top.

Translate that same grammar into a more alive and dimensional visual language. The image must no longer behave only as literal garment embroidery documentation, but it must also not become full realistic scene-world depth. It should become a **creative hybrid stitched-textile image system** where chikankari's own embroidery intelligence generates richer form, stronger visual invention, and more dimensional presence.

The transformation must affect the whole frame. If figures appear, faces, bodies, silhouettes, posture, grouping, and relations must all be rebuilt through chikankari's stitch-born logic. If objects appear, they must be shaped through cloth refinement, miniature motif order, and embroidered-surface intelligence. If environment appears, it must grow from stitched textile structure and Lucknow elegance rather than remain generic. The embroidered system must become the larger organizing intelligence, not just surface ornament applied to a normal world.

Dimensionality must come from chikankari itself: from guide-planned motif rhythm, fine needle-built texture, dhulayi softness, whitework tonal restraint, floral and architectural motif spread, and refined cloth behavior. Do not solve dimensionality through generic rendering habits, fashion glamour, lace imitation, or a normal image with embroidery added later.

Do not create:

luxury textile concept art, couture embellishment styling, printed embroidery simulation, lace-fashion surface design, or a generic dimensional image decorated later by chikankari.

The final result must feel like **the same chikankari grammar has entered a richer, more imaginative, more dimensional artisan translation without losing itself**.

Reusable Variable Template

Create **[SUBJECT / IMAGE / STITCHED TEXTILE WORLD / LUCKNOW EMBROIDERED SURFACE SYSTEM]** in the **creative artisan translation of Chikankari from Uttar Pradesh**.

Keep unchanged:

- cloth-surface identity
- chapayi–tanka–dhulayi process memory

- miniature and even stitch behavior
- whitework-derived delicacy
- thread-raised textile texture
- floral-and-Mughal-architecture motif logic
- Lucknow refinement
- whole-frame style consistency

Translate it into a richer dimensional hybrid visual system like this:

- **[MAIN CLOTH FIELD / MAIN GARMENT AREA / MAIN EMBROIDERED SURFACE]** becomes a chikankari-built textile presence with more dimensional life, but still governed by stitch rhythm and cloth refinement
- **[SECONDARY FIELDS / BORDER ZONES / SUPPORT MOTIFS / DRAPE AREAS]** also transform through the same chikankari grammar rather than generic styling
- **[STITCH TEXTURE / RAISED THREAD / TONAL SHADOW / NEEDLE-BUILT DETAIL]** become more spatially alive and structurally expressive while remaining miniature and delicate
- **[MOTIF SYSTEM / FLOWERS / CREEPERS / PAISLEYS / ARCHITECTURAL FORMS]** must remain embroidery-born and distributed through cloth logic
- **[IF FIGURES APPEAR]** faces, bodies, posture, grouping, object logic, and environment logic must all be rebuilt through chikankari order
- **[IF ENVIRONMENT APPEARS]** it must grow from embroidered cloth intelligence, drape-aware surface logic, and Lucknow refinement rather than realism

Increase:

- dimensional presence
- visual richness
- artisan-like reinterpretation
- hybrid 2D + 3D form
- structural clarity
- whole-frame transformation
- imaginative stitched spatial layering

Do not use:

- lace-fashion logic
- printed-textile logic
- couture-heavy embellishment logic
- realism with one embroidered patch
- generic environment with chikankari overlay
- only motif carrying the style
- sparkle-first ornament replacing stitch intelligence

Success condition:

the result feels like the same chikankari style has been artistically translated into a richer dimensional hybrid system.

Failure condition:

the result feels like a generic dimensional image decorated later by chikankari.

Image-to-Image

Convert this source image into the **creative artisan translation of Chikankari from Uttar Pradesh**.

Preserve the source image's core subject logic, action logic, grouping logic, and readability, but rebuild the full image through chikankari's internal grammar translated into a richer, more dimensional 2D + 3D hybrid visual system.

Replace generic surface ornament with stitch-built textile structure. Replace ordinary patterning with chapayi-guided embroidered order. Replace graphic or lace-like texture with miniature thread rhythm. Replace harsh contrast with whitework-derived softness. If figures are present, transform faces, bodies, silhouettes, posture, grouping, object logic, and surrounding structure through chikankari stitched logic, not realism. If objects or environment are present, they must also be rebuilt through embroidered cloth intelligence instead of remaining generic.

Let the image gain more dimensional life, richer stitched form, more imaginative layering, and stronger whole-frame coherence. But do not turn it into fashion concept art, lace décor styling, or realism with chikankari decoration added afterward.

Do not style only one sleeve, border, or patch. Do not leave the rest of the frame generic. The final result must feel like **the source image has been fully reauthored through a creative artisan translation of chikankari**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in the **fully resolved believable real-world 3D translation of Chikankari from Uttar Pradesh**, preserving the same authentic source grammar but pushing it into its **most complete, most embodied, most scene-capable volumetric world**.

Keep the same deep chikankari visual intelligence fully unchanged: cloth-surface identity, chapayi–tanka–dhulayi process memory, miniature and even stitch behavior, whitework-derived delicacy, floral-and-Mughal-architecture motif logic, thread-raised textile texture, and Lucknow refinement. Do not turn this into generic fashion realism, couture

realism, lace realism, or a normal world with one embroidered garment or textile panel added on top.

Now convert that same grammar into a believable volumetric world. The result must have believable cloth behavior, believable material-light interaction, believable spatial separation, believable object presence, believable environmental completion, and believable three-dimensional world logic. But every visible part of the image must still be generated by chikankari grammar.

If figures are present, they must be rebuilt through chikankari-born stitched textile structure, not normal realism wearing embroidered clothing. If objects appear, they must be shaped through cloth refinement, stitch rhythm, and motif-order intelligence. If environment appears, it must be generated by embroidered-surface logic, miniature ornamental rhythm, whitework softness, and Lucknow textile order. The world must not become ordinary reality with one chikankari insert into it.

Depth must now become full scene-world depth, but it must remain style-controlled. The source grammar must still govern figure design, shape logic, composition logic, material identity, environment logic, and total scene organization.

Do not let realism replace the style. Do not let the style survive only in one garment, one border, one sleeve, one cushion, or one floral stitched zone. Do not create a premium cinematic makeover stronger than the source grammar. The final image must feel like **chikankari itself has become a believable full world.**

Reusable Variable Template

Create **[SUBJECT / SCENE / FIGURAL WORLD / EXPANDED CHIKANKARI WORLD]** in the **fully resolved believable real-world 3D translation of Chikankari from Uttar Pradesh.**

Keep unchanged:

- cloth-surface identity
- chapayi–tanka–dhulayi process memory
- miniature and even stitch behavior
- whitework-derived delicacy
- thread-raised textile texture
- floral-and-Mughal-architecture motif logic
- Lucknow refinement
- whole-frame style consistency

Translate it into full world-depth like this:

- **[MAIN FORM / MAIN FIGURE / MAIN CLOTH FIELD / MAIN EMBROIDERED SURFACE]** becomes a fully embodied chikankari-built presence with believable stitched-textile-world logic

- **[SECONDARY FORMS / SUPPORT FIELDS / BORDER ZONES / DRAPE SURFACES]** also remain under the same chikankari-born logic
- **[STITCH RHYTHM / RAISED THREAD / TONAL RELIEF / CLOTH SOFTNESS / MOTIF SPREAD]** become volumetric world-organizing elements still governed by embroidery structure
- **[SURROUNDING WORLD / ENVIRONMENT / SPATIAL FIELD]** becomes a believable scene-world generated by chikankari textile intelligence rather than generic realism
- **[IF FIGURES ARE PRESENT]** faces, bodies, posture, grouping, object logic, and environment logic must all remain chikankari-born, not realism-first

Increase:

- volumetric world-building
- material-light interaction
- spatial separation
- scene completeness
- object presence
- environmental orchestration
- full-frame readability
- stitched-cloth-to-world transformation

Do not lose:

- cloth-surface logic
- stitch-built identity
- miniature and even rhythm
- whitework memory
- wash-softened finish
- motif refinement
- Lucknow elegance
- whole-frame chikankari identity

Do not use:

- realistic fashion shoot with one chikankari garment
- generic cinematic illustration
- style-as-embroidered patch only
- style-as-lace only
- style-as-floral motif only
- style-as-surface ornament only
- premium finish overpowering source grammar
- reality with chikankari flavor added later

Success condition:

the result feels like chikankari itself has become a believable full world.

Failure condition:

the result feels like reality has been coated with chikankari.

Image-to-Image

Convert this source image into the **fully resolved believable real-world 3D translation of Chikankari from Uttar Pradesh.**

Preserve the source image's main subject logic, action logic, relationship logic, and readability, but rebuild the entire image through chikankari's source grammar translated into **full world-depth.**

Replace generic forms with chikankari-built stitched-textile volumetric presences. Replace ordinary surfaces with embroidered cloth construction. Replace generic decorative order with chapayi-guided planning, miniature stitch rhythm, whitework softness, thread-raised texture, and Lucknow refinement. Replace realism-first staging with chikankari-born textile-world order. If figures are present, transform faces, bodies, posture, grouping, silhouette, object logic, and environment logic through chikankari grammar, not realism.

Allow the result to gain complete volumetric embodiment, stronger material-light interaction, spatial separation, object presence, scene completion, and environmental orchestration. But do not let the image become generic reality with chikankari added later. The whole world must remain chikankari-born.

Do not stylize only one garment panel, one sleeve, one dupatta edge, or one fabric patch while leaving the rest of the world generic. Do not make it a fashion-realism scene with an embroidery insert. Do not let the source grammar weaken as depth increases. The final result must feel like **the source image has been fully reauthored as a believable volumetric world generated by chikankari itself.**
