

Mahabalipuram sculpture - Tamil Nadu

V1 — Authentic Style

Universal Hard Prompt

Create an image in the pure authentic source-truth visual logic of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Treat this as a real Pallava sacred granite monument-sculpture system, not as generic South Indian temple carving, not as generic stone deity art, not as heritage-stone mood, not as fantasy rock monument art, and not as a realistic world with carved motifs added later.

Build the entire image as if it comes from true Mahabalipuram monument intelligence:
granite stone-body identity,
rock-cut cave logic,
monolithic ratha logic,
bas-relief field logic,
sacred temple-body integration,
red-oxide-guided carving planning,
chisel-and-hammer reduction,
refined carved contour,
sanded and polished granite finish,
and deity- and myth-centered sacred narrative.

The image must not read like a freestanding statue first.
It must read like sacred stone-monument body from the beginning.

The style must control the whole frame:
face construction,
body logic,
animal logic,
deity and celestial grouping,
relief depth,
stone mass,
architectural integration,
cave-front logic,
ratha massing,
field composition,
background rock-body,
and same-language monument control.

If figures appear, do not build them as normal realistic humans first.
Build them as stone-born sacred presences:
monument-aware,

relief-aware,
non-photoreal in logic,
and shaped by Mahabalipuram granite grammar rather than by realism-first anatomy.

Do not treat the branch like generic temple sculpture.
Do not turn it into later Chola-style dense temple surface carving.
Do not reduce it to rough granite texture.
Do not make it a scenic heritage ruin with local carvings.
Do not let generic realism sit underneath the style.

The image must still feel like Mahabalipuram:
granite monument-body truth,
rock-cut / monolithic / relief identity,
sacred mythic program,
temple integration,
and Pallava monument logic.

Preserve true branch identity:
granite-first,
monument-first,
relief-first,
rock-cut-first,
temple-body-first,
and same-language world logic.

Do not make it:
generic South Indian temple carving,
generic stone deity sculpture,
later Chola surface-density by default,
fantasy sacred rock art,
or realism with carved motifs used as local flavor.

The final image must feel like the original Pallava Mahabalipuram system itself made this image.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in the pure authentic source-truth visual logic of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Treat the style as a sacred granite monument-sculpture system built from:
granite stone-body identity,
rock-cut cave logic,
monolithic form logic,
bas-relief field organization,
red-oxide-guided carving planning,

chisel-and-hammer reduction,
refined contour carving,
and temple-body integration.

Core style system to preserve:
granite monument-body truth,
rock-cut / monolithic / relief ontology,
sacred mythic program,
temple-bound sculptural integration,
tool-made reduction memory,
Pallava Mahabalipuram identity,
whole-frame consistency.

Translate the image like this:

[MAIN FIGURES] must become stone-born sacred figures, not normal people
[FACES] must become monument-readable, carved, non-photoreal, and structurally clear
[BODIES / GESTURE / POSTURE] must obey relief and temple-body logic rather than realism-first anatomy
[ANIMALS / CELESTIAL BEINGS] must become relief-field presences, not decorative extras
[ARCHITECTURE / SUPPORTS] must become cave, ratha, relief-wall, or temple-body structures born from the same granite logic
[GROUND / SURFACES] must become carved stone-field space, not generic landscape or flooring
[ENVIRONMENT / BACKGROUND] must also inherit the same monument-sculpture language

Keep:

granite mass,
relief-field order,
rock-cut / monolithic identity,
sacred narrative clarity,
temple-body integration,
same-language world control.

Avoid:

generic temple carving,
generic heritage-stone mood,
later Chola-style dense surface carving,
fantasy rock monument art,
generic realism with local carvings,
or one carved panel inside an unstylized world.

The final result must feel like true Mahabalipuram monument logic itself generated the whole image.

Image-to-Image

Convert this source image into the pure authentic source-truth visual logic of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Preserve the source image's subject count, main action, pose relationships, and basic readability,
but rebuild the entire image through real Mahabalipuram granite monument intelligence.

Replace normal realism with:
granite stone-body identity,
rock-cut cave logic,
monolithic ratha logic,
bas-relief field organization,
temple-body integration,
red-oxide-guided carving planning,
chisel-and-hammer reduction,
and sacred mythic monument presence.

Do not merely add carved deities.
Do not merely add granite texture.
Do not keep realistic architecture while only one wall becomes carved.
Do not keep realistic landscape while only one monument becomes local.

Rebuild:
faces as carved monument faces,
bodies as carved sacred stone bodies,
animals and celestial forms as relief-field forms,
architecture as rock-cut / monolithic temple-body,
space as granite monument-space,
and the whole frame as one Mahabalipuram-authored visual language.

The final result must feel like the source image has been completely re-authored by authentic Pallava Mahabalipuram logic, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Preserve the same deep source grammar of the style:
granite stone-body identity,
rock-cut cave logic,

monolithic form logic,
bas-relief field organization,
sacred temple-body integration,
red-oxide-guided carving planning,
chisel-and-hammer reduction,
refined contour carving,
and sacred mythic narrative.

Now translate that same grammar into believable handcrafted dimensional presence.

This must not become generic stone realism.
This must not become premium heritage spectacle.
This must not become a realistic ancient site with local carvings added later.

Dimensionality must come from the style itself:
through granite mass,
carved depth,
relief-layer separation,
monolithic body presence,
rock-cut spatial order,
chisel-cut contour hierarchy,
and temple-body integration.

This is not realism-first stone architecture.
This is the same sacred monument-body gaining stone-body depth.

Allow:
moderate volume,
clearer granite mass,
stronger relief depth,
more tactile carved surface presence,
more believable monolithic structure,
handcrafted stone thickness,
and stronger relation between monument-body and surrounding sacred space.

Figures or wider image-world elements, if present, must remain style-born:
not realism-first,
not ruin-tourism-first,
not generic ancient figures near a monument.
They must inherit Mahabalipuram stone grammar and same-language world construction.

Do not let scenic lighting fake the translation.
Do not let the environment stay generic while only one relief gains style.
Do not let rough stone mood replace monument logic.
Do not let realism replace Pallava DNA.

The whole image must feel like Mahabalipuram has entered handcrafted dimensional space
without losing itself.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = authentic handcrafted dimensional translation of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Preserve the unchanged deep source core:

granite stone-body identity,
rock-cut / monolithic / relief ontology,
temple-body integration,
sacred mythic program,
tool-made reduction memory,
and Pallava Mahabalipuram monument logic.

Translate the image into handcrafted dimensional form by increasing:

granite mass,
monument presence,
relief depth,
stone-field articulation,
figure-ground separation,
architectural integration,
and same-language spatial structure.

Build the image like this:

[MAIN FORMS / OBJECTS] become handcrafted dimensional presences still governed by Mahabalipuram monument logic

[FACES if present] remain carved, monument-readable, and non-photoreal, never realism-first

[BODIES / GESTURE / POSTURE] gain dimensional stone-body but still read as source-born through relief and temple-body order

[ANIMALS / CELESTIAL FORMS] gain carved presence through field logic, not generic realism

[ARCHITECTURE / SUPPORTS] gain stronger rock-cut and monolithic mass, not generic temple realism

[GROUND / SURFACES] become granite monument-space, not generic landscape fill

[ENVIRONMENT / BACKGROUND] gains same-language Pallava stone structure, not generic scenic realism

Keep:

granite monument-body truth,
relief-field organization,
rock-cut / monolithic identity,
sacred mythic clarity,
temple-body integration,
same-language world control.

Avoid:

generic stone realism,
premium heritage styling,
later Chola dense surface logic,
fantasy sacred rock city,
generic landscape realism with carvings,
or one carved monument inside an unstylized world.

The final image must feel like authentic Mahabalipuram grammar translated into handcrafted stone-body depth.

Image-to-Image

Convert this source image into V2 = authentic handcrafted dimensional translation of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Keep the source image's subject count, core action, and readability,
but rebuild the entire image through Mahabalipuram monument grammar translated into handcrafted dimensional form.

The image must no longer behave like generic ancient-stone realism.

Replace that with:

granite stone-body identity,
rock-cut cave logic,
monolithic form logic,
bas-relief field order,
temple-body integration,
tool-made carving memory,
and sacred mythic monument presence.

Add:

moderate dimensional presence,
clear granite mass,
strong relief depth,
tactile carved surface,
strong monolithic presence,
and handcrafted sacred spatial logic.

But do not let dimensionality come from generic realistic site rendering.

Do not keep normal environment or figures while only one relief or temple face becomes local.

Rebuild all visible elements so they feel born from Mahabalipuram logic.

The result must feel like the source image has entered the branch's handcrafted dimensional monument world, not that local carvings have been placed into an ordinary ancient-stone scene.

V3 — 3D / Realistic / Cinematic Translation

Universal HaCreate an image in V3 = fully resolved believable real-world 3D translation of the same source grammar of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Keep the authentic Pallava Mahabalipuram sacred stone-monument system unchanged and push it into its most complete, most embodied, most scene-capable, most volumetric image-world.

This is maximum world-depth, not realism replacement.

Preserve the same unchanged deep Mahabalipuram core:

granite stone-body identity,

rock-cut cave logic,

monolithic temple form,

bas-relief field organization,

sacred temple-body integration,

red-oxide-guided carving planning memory,

chisel-and-hammer reduction logic,

refined stone contour,

and sacred mythic monument program.

Important:

**do not create generic heritage-site realism,
do not create generic temple realism,
do not create generic rocky landscape realism,
do not create a normal world with a few Pallava carvings added later.**

The entire world must be rebuilt through Mahabalipuram logic.

Every visible category must become source-born:

**faces,
bodies,
animals,
celestial beings,
relief fields,
rock masses,
cave fronts,
rathas,
architectural structures,
ground,
foreground, midground, background,
negative space,
and spatial rhythm.**

Believable real-world 3D here means:

believable granite mass,

believable carved depth,

believable light on stone form,

believable spatial separation,

believable monument presence,

believable sacred-site logic.

But the style must still control:

face design,

body order,

relief logic,

shape logic,

composition logic,

material identity,

environment logic,

and scene organization.

Increase:

full same-style world embodiment,

full spatial completion,

full monument presence,

full environmental completion,
strong figure-ground separation through stone-monument logic,
strong readability through Mahabalipuram logic,
strong whole-frame coherence through Pallava monument logic.

Absolute rule:

the Mahabalipuram system must not decorate the world.

the Mahabalipuram system must generate the world.

The environment must not be generic realism with carvings later.

The architecture must not be normal temple architecture with local reliefs.

The landscape must not be generic coast or rock scenery with sacred carvings added afterward.

Everything must feel reconstructed by the Pallava Mahabalipuram monument system itself.

Do not introduce:

generic realism,

premium heritage spectacle,

fantasy sacred-rock city,

later Chola-style dense surface carving,

or a second visual language stronger than the source grammar.

The final image must feel like:

the same Mahabalipuram style itself has become a fully embodied complete volumetric scene-world.

rd Prompt

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in V3 = fully resolved believable real-world 3D translation of the same source grammar of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Keep the authentic Pallava Mahabalipuram sacred stone-monument system unchanged and push it into maximum world-depth.

Preserve the same unchanged deep core:
granite stone-body identity,
rock-cut / monolithic / relief ontology,
temple-body integration,
sacred mythic program,
tool-made reduction memory,
and same-language Pallava monument construction.

Important:
the whole world must be rebuilt through Mahabalipuram logic.
Do not keep normal realism and then add Pallava flavor later.

Build the image like this:
[MAIN FORMS / OBJECTS] must become source-born monument presences, not normal architecture with local carvings
[FACES if present] must become carved monument faces, not default human realism
[BODIES if present] must become stone-born sacred bodies, not generic people
[ANIMALS / CELESTIAL FORMS] must become relief-field presences, not decorative extras
[ARCHITECTURE / SUPPORTS] must become rock-cut, monolithic, or relief-born temple-body structures
[GROUND / SURFACES] must become granite monument-space, not generic landscape or flooring
[ENVIRONMENT / BACKGROUND] must become same-language Pallava stone world-space, not generic heritage-site realism

Believable real-world 3D here means:
believable granite mass,
believable carved depth,
believable light on stone form,

believable spatial separation,
believable monument presence,
believable scene-world coherence.

Increase:

full world embodiment,
full spatial completion,
full monument presence,
full environmental completion,
strong figure-ground separation,
strong scene readability,
strong whole-frame orchestration.

Keep unchanged:

granite monument-body truth,
rock-cut / monolithic / relief identity,
sacred mythic clarity,
temple-body integration,
same-language world control.

Avoid:

generic realism,
premium heritage spectacle,
later Chola dense surface logic,
fantasy rock monument art,
style only in carved motifs,
or any second visual language overpowering the source grammar.

The final image must feel like:

the same Mahabalipuram grammar itself has become a believable volumetric monument-world.

Image-to-Image

Convert this source image into V3 = fully resolved believable real-world 3D translation of the same source grammar of Pallava rock-cut / Mahabalipuram stone-sculpture systems from Tamil Nadu.

Preserve the source image's subject count, core action, scene purpose, and main relationships,
but rebuild every visible element through Mahabalipuram sacred monument intelligence fully embodied as reality.

Keep the authentic branch unchanged and push it into maximum world-depth.

Replace ordinary realism with:

granite stone-body identity,
rock-cut cave logic,
monolithic form logic,
bas-relief field order,
temple-body integration,
tool-made reduction memory,
and sacred mythic monument presence.

Do not keep a normal heritage site and add Pallava reliefs later.
Do not keep generic architecture and add local carvings later.
Do not keep generic landscape and add sacred stone features later.
Do not let the style survive only in one carved wall or one monument object.

Rebuild:
faces as carved monument faces,
bodies as stone-born sacred bodies,
animals and celestial forms as relief-field forms,
architecture as rock-cut / monolithic temple-body,
space as granite monument-space,
environment as same-language Pallava world-space,
and the whole frame as one uninterrupted Mahabalipuram scene-world.

Expand the source into:
full volumetric embodiment,
full monument presence,
full environmental completion,
coherent material-light behavior,
clear spatial separation,
and complete scene readability,
but only through Mahabalipuram grammar.

Absolute rule:
the Mahabalipuram system must generate the world, not decorate the world.

The final result must feel like:
the same Mahabalipuram style itself has become a believable fully embodied volumetric monument-world.
If it feels like reality coated with Pallava carved flavor, it has failed.
