

Risa - Tripura

V1 — Authentic Style

Universal Hard Prompt

Create an image in the pure authentic source-truth visual logic of Risa from Tripura.

Treat this as a true Tripura customary handwoven identity-cloth system, not as a generic northeastern scarf, not as a tribal stole, not as a fashion handloom accessory, and not as a decorative ethnic wrap.

Build the image through real Risa logic:
narrow-format woven cloth identity,
handwoven loom-built structure,
community-coded pattern clarity,
body-near ceremonial cloth behavior,
Tripuri customary use logic,
and social and ritual function.

The object must feel like a real Risa:
compact,
wearable,
presentable,
ceremonial,
identity-bearing,
and woven rather than printed.

The visual language must come from:
narrow woven proportion,
band and motif organization,
loom-built textile truth,
clear woven color relationships,
customary cloth presence,
and Tripura-rooted social meaning.

The style must control the whole image:
cloth proportion,
band structure,
motif placement,
woven texture,
edge behavior,
body-use logic,
presentation logic,
and same-language Tripuri cloth-world coherence.

Do not make it:

a generic tribal scarf,
a generic northeastern stole,
a broad shawl,
a fashion accessory,
a printed ethnic textile,
or a generic colorful handloom cloth.

Do not let the image become generic textile realism with local pattern added later.

Do not let the style survive only in surface decoration.

Do not reduce Risa to stripes or geometric ornament alone.

The final image must feel like the original Tripura Risa system itself generated the image.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in the pure authentic source-truth visual logic of Risa from Tripura.

Treat the style as a customary handwoven identity-cloth system built from:

narrow-format woven structure,
community-coded pattern language,
colorful woven band and motif organization,
body-near ceremonial usability,
Tripuri customary cloth logic,
and handloom / loin-loom process memory.

Core style system to preserve:

narrow ceremonial cloth identity,
handwoven loom truth,
community-specific pattern clarity,
social and ritual-use versatility,
Tripuri attire-system anchoring,
and whole-frame same-language control.

Translate the image like this:

[MAIN CLOTH] must become a real narrow-format Risa cloth, not a generic scarf

[SURFACE] must feel woven, not printed or decorated later

[PATTERN] must feel community-coded and loom-built, not generic tribal ornament

[PROPORTION] must remain compact and body-near, not shawl-like

[USE CONTEXT] must feel ceremonial, social, or customary, not fashion-styled

[COLOR] must feel woven into the textile structure, not applied as a graphic layer

Keep:

Risa cloth identity,

narrowness,
loom-built truth,
pattern clarity,
Tripura customary meaning,
and same-language cloth-world control.

Avoid:
generic tribal stole logic,
generic northeastern textile styling,
broad shawl behavior,
printed ethnic accessory treatment,
fashion handloom styling,
or generic realism with one local cloth added later.

The final result must feel like true Risa logic itself generated the whole image.

Image-to-Image

Convert this source image into the pure authentic source-truth visual logic of Risa from Tripura.

Preserve the source image's subject count, main action, and core readability,
but rebuild the entire image through real Risa customary-cloth intelligence.

Replace generic textile logic with:
narrow-format handwoven cloth identity,
loom-built woven structure,
community-coded pattern clarity,
body-near ceremonial cloth behavior,
Tripuri social and ritual meaning,
and same-language Risa-world logic.

Do not merely place a Risa-like cloth into the image.
Do not merely add northeastern-looking patterns.
Do not keep generic realism while only the textile surface becomes local.
Do not turn the cloth into a scarf or accessory-first object.

Rebuild:
cloth as real Risa,
surface as woven structure,
pattern as community-coded woven order,
proportion as compact ceremonial cloth logic,
use as Tripuri customary function,
and the whole frame as one Risa-authored visual language.

The final result must feel like the source image has been completely re-authored by authentic Risa logic, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of Risa from Tripura.

Preserve the same deep source grammar of the style:
narrow-format ceremonial cloth identity,
handwoven loom truth,
community-coded pattern logic,
Tripuri customary use meaning,
body-near cloth behavior,
and Risa's role as a true identity-cloth system.

Now translate that same grammar into believable handcrafted woven-cloth depth.

This must not become generic textile realism.
This must not become boutique handloom styling.
This must not become premium fashion scarf photography.
This must not become a generic northeastern woven accessory with more texture.

Dimensionality must come from the style itself:
through stronger loom-built structure,
clearer woven band and motif presence,
more tactile cloth-body behavior,
more believable handwoven textile depth,
stronger edge and fold readability,
more convincing compact body-near cloth presence,
and stronger customary use readiness.

This is not realism-first cloth rendering.
This is the same Risa grammar gaining woven-cloth depth.

Allow:
moderate textile tactility,
clearer woven structure,
stronger pattern-body integration,
better cloth mass,
stronger compact ceremonial presence,
and more believable handwoven material truth.

If wider worlds appear, they must remain Risa-born:
not fashion-first,
not decor-first,
not generic textile realism with local patterning.
They must inherit Risa logic and same-language Tripuri cloth-world construction.

Do not let polish fake the translation.
Do not let realism overpower customary cloth logic.
Do not let the cloth become generic while only the pattern remains local.

The whole image must feel like Risa has entered handcrafted woven-cloth depth without losing itself.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = authentic handcrafted dimensional translation of Risa from Tripura.

Preserve the unchanged deep source core:
narrow ceremonial cloth identity,
handwoven loom truth,
community-coded pattern clarity,
Tripuri customary use logic,
body-near functionality,
and Risa attire-system anchoring.

Translate the image into handcrafted dimensional form by increasing:
woven texture readability,
cloth tactility,
material presence,
pattern-body integration,
edge and fold clarity,
compact textile presence,
and same-language customary cloth structure.

Build the image like this:
[MAIN CLOTH] becomes handcrafted dimensional Risa cloth, still governed by narrow-format customary logic
[SURFACE] becomes more tactile and woven, never printed
[PATTERN] remains loom-built and community-coded, never generic tribal decoration
[PROPORTION] remains compact and body-near, never broad-shawl-like
[USE CONTEXT] gains stronger physical credibility but stays Tripuri and customary
[COLOR] gains woven-material depth, not synthetic or graphic surface behavior

Keep:
Risa cloth identity,

handwoven truth,
compact ceremonial logic,
Tripura-rooted meaning,
pattern clarity,
and same-language world control.

Avoid:
generic textile realism,
boutique scarf styling,
broad shawl logic,
generic northeastern fashion textile behavior,
printed or surface-applied ethnic design,
or one Risa-like cloth inside an unstylized world.

The final image must feel like authentic Risa grammar translated into handcrafted woven-cloth depth.

Image-to-Image

Convert this source image into V2 = authentic handcrafted dimensional translation of Risa from Tripura.

Keep the source image's subject count, core action, and main readability,
but rebuild the image through Risa customary handwoven grammar translated into handcrafted dimensional form.

The image must no longer behave like generic textile realism.

Replace that with:

narrow-format handwoven cloth identity,
loom-built woven structure,
community-coded pattern logic,
body-near ceremonial presence,
Tripuri customary use behavior,
and same-language Risa cloth-world construction.

Add:

moderate woven depth,
clearer textile tactility,
stronger material presence,
better compact cloth readability,
stronger relation between woven pattern and cloth body,
and clearer ceremonial-use presence.

But do not let dimensionality come from generic premium textile rendering.
Do not keep normal scarf or cloth behavior while only the pattern becomes local.

Rebuild all visible elements so they feel born from Risa logic.
The result must feel like the source image has entered the branch's handcrafted woven-cloth world, not that Risa styling has been placed into an ordinary image.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in V3 = fully resolved believable real-world 3D translation of the same source grammar of Risa from Tripura.

Keep the authentic Risa customary handwoven identity-cloth system unchanged and push it into its most complete, most embodied, most scene-capable, most volumetric world.

This is maximum world-depth, not realism replacement.

Preserve the same unchanged deep Risa core:
narrow-format ceremonial cloth identity,
handwoven loom truth,
community-coded pattern clarity,
Tripuri customary use logic,
body-near cloth behavior,
attire-system anchoring,
and Risa's ceremonial and social intelligence.

Important:
do not create generic textile realism,
do not create luxury heritage-fashion styling,
do not create generic northeastern woven-costume realism,
do not create normal realistic clothing with one local Risa cloth added later.

The entire world must be rebuilt through Risa logic.

Every visible category must become source-born:
cloth proportion,
woven structure,
pattern order,
edge behavior,
fold behavior,
body relation,
presentation logic,
ritual and social-use logic,
foreground, midground, background world organization,
and full scene readability.

Believable real-world 3D here means:

believable narrow woven-cloth presence,
believable handwoven textile behavior,
believable compact body-near ceremonial use,
believable woven pattern clarity,
believable customary presentation logic,
and believable Tripura cloth-world presence.

But the style must still control:
cloth identity,
woven logic,
pattern logic,
use logic,
social meaning,
attire relation,
environment logic,
and scene organization.

Increase:
full same-style world embodiment,
full cloth presence,
full environmental completion,
full use-context clarity,
stronger scene readability through Risa logic,
and stronger whole-frame coherence through Tripura customary cloth structure.

Absolute rule:
the Risa system must not decorate the world.
the Risa system must generate the world.

Do not keep generic realism and then add local woven flavor later.
Do not let the style survive only in one cloth piece.
Do not let polish overpower source grammar.
Do not introduce a second visual language stronger than the Risa system.

The final image must feel like:
the same Risa style itself has become a fully embodied complete cloth world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in V3 = fully resolved believable real-world 3D translation of the same source grammar of Risa from Tripura.

Keep the authentic Risa customary handwoven identity-cloth system unchanged and push it into maximum world-depth.

Preserve the same unchanged deep core:

narrow ceremonial cloth identity,
handwoven loom truth,
community-coded pattern clarity,
Tripuri social and ritual meaning,
body-near use logic,
and attire-system anchoring.

Important:

the whole world must be rebuilt through Risa logic.

Do not keep normal realism and then add Risa flavor later.

Build the image like this:

[MAIN CLOTH] must become source-born Risa cloth, not a generic scarf or wrap

[SURFACE] must become woven structure, not print or graphic styling

[PATTERN] must become community-coded loom-built order, not decorative tribal ornament

[PROPORTION] must remain compact and body-near, not shawl-like

[USE CONTEXT] must become true Tripuri customary use, not generic styling

[CHARACTERS / WEARERS / USERS] must interact with the cloth in ways that feel
ceremonially and socially correct

[ENVIRONMENT / BACKGROUND] must become same-language Risa world-space, not
generic realism

Believable real-world 3D here means:

believable woven-cloth presence,

believable handloom-built behavior,

believable compact ceremonial usability,

believable Tripura customary presence,

and believable full-scene coherence.

Increase:

full world embodiment,

full cloth presence,

full environmental completion,

stronger woven readability,

stronger use-context clarity,

stronger scene readability,

and stronger whole-frame orchestration.

Keep unchanged:

Risa cloth identity,

narrow-format truth,

handwoven structure,

pattern clarity,

Tripura-rooted meaning,

and same-language world control.

Avoid:

generic textile realism,

luxury fashion drift,
generic northeastern costume styling,
broad shawl behavior,
printed ethnic accessory language,
or any second visual language overpowering the source grammar.

The final image must feel like:
the same Risa grammar itself has become a believable full cloth world.

Image-to-Image

Convert this source image into V3 = fully resolved believable real-world 3D translation of the same source grammar of Risa from Tripura.

Preserve the source image's subject count, core action, scene purpose, and main relationships,
but rebuild every visible element through Risa customary cloth intelligence fully embodied as reality.

Keep the authentic branch unchanged and push it into maximum world-depth.

Replace ordinary realism with:
narrow-format handwoven cloth identity,
loom-built woven structure,
community-coded pattern logic,
body-near ceremonial cloth behavior,
Tripuri customary use meaning,
and same-language Risa world construction.

Do not keep normal textile realism and add Risa later.
Do not keep generic clothing logic and only localize one textile.
Do not let the style survive only in patterning.

Rebuild:
cloth as real Risa,
surface as woven structure,
pattern as community-coded loom order,
body relation as compact ceremonial-use logic,
scene logic as Tripuri customary cloth-world behavior,
environment as same-language Risa world-space,
and the whole frame as one uninterrupted Risa-authored scene-world.

Expand the source into:
full cloth-world embodiment,
full use-context presence,
full environmental completion,

coherent material behavior,
clear woven readability,
and complete scene readability,
but only through Risa grammar.

Absolute rule:
the Risa system must generate the world, not decorate the world.

The final result must feel like:
the same Risa style itself has become a believable fully embodied cloth world.
If it feels like generic reality coated with Tripura handloom flavor, it has failed.
