

# Pembarthi - Telangana

## V1 — Authentic Style

### Universal Hard Prompt

Create an image in pure authentic source-truth Pembarthi from Telangana.

Treat this as a true Telangana sheet-metal ornamental craft system, not as cast-metal sculpture, not as flat brass engraving, not as generic brass décor, not as machine-stamped ornament, and not as showroom luxury metalware.

Build the image from the true grammar of Pembarthi:

worked brass or copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object and temple-object logic,  
polished but hand-authored metal finish,  
and whole-object Pembarthi coherence.

The image must feel like it genuinely belongs inside the original Pembarthi tradition.

Keep the whole frame inside one metal-authored visual language.

The support itself must be source-born:

sheet metal first,  
worked by hand,  
relief built through hammering and chiseling,  
not cast mass,  
not industrial stamping,  
not painted metal illusion.

Motif and object logic must remain source-faithful:

floral ornament,  
sacred and temple-linked motifs,  
ritual or prestige object structure,  
plaques, decorative articles, sacred elements, or ornamental forms,  
all governed by sheet-metal relief discipline rather than pictorial realism.

Material memory must remain visible:

brass or copper sheet,  
lac-backed working memory,  
raised and recessed hierarchy,  
engraved contour,  
joined and finished construction where relevant,

polished display-ready surface,  
not industrial perfection,  
not flat metallic shine only.

Use Pembrothi finish logic:  
polished but hand-worked,  
refined but not factory-perfect,  
relief still visible,  
tool-made structure still legible,  
never generic glossy brass luxury styling.

Do not add:  
cast-idol logic,  
machine-stamped metal pattern,  
flat engraved brass plate,  
generic metallic décor,  
industrial sheet-metal aesthetics,  
or any second visual language stronger than Pembrothi.

The final result must feel like true Pembrothi sheet-metal craft from Telangana at source-truth level, not a modern brass object decorated to resemble handwork.

## **Reusable Variable Template**

Create [SUBJECT / OBJECT / SURFACE / METAL WORLD] using the authentic source-truth grammar of Pembrothi from Telangana.

Core style system to preserve:  
worked brass/copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object logic,  
polished hand-authored metal finish,  
whole-object Pembrothi coherence.

Translate the image like this:  
[MAIN OBJECT / MAIN SURFACE / MAIN FORM] becomes a Pembrothi-born sheet-metal presence built through embossed relief, engraved contour, and ornamental object discipline.  
[SECONDARY SURFACES / SUPPORTING ELEMENTS] become supporting Pembrothi presences obeying the same worked-sheet-metal logic.  
[BACKGROUND / WORLD / SURROUNDING AREAS] becomes a Pembrothi-authored metal-object field rather than neutral realism or generic brass styling.

Keep:  
sheet-metal identity,

embossed and engraved relief,  
hand-worked finish,  
ornamental prestige-object order,  
temple/object authority,  
Pembarthi coherence.

Avoid:

cast sculpture,  
flat engraving only,  
machine-stamped metal,  
generic brass décor,  
industrial realism,  
or a realistic world with Pembarthi ornament pasted on top.

The final image must feel like the Pembarthi tradition itself authored the full worked-metal world.

## **Image-to-Image**

Convert this source image into an authentic source-truth Pembarthi world from Telangana.

Preserve the source image's core subject count, structural readability, and main visual organization, but rebuild the entire image through true Pembarthi grammar.

Replace ordinary image logic with:  
worked brass/copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object and temple-object logic,  
and full Pembarthi metal coherence.

Do not simply turn the image metallic.  
Do not merely add embossed-looking ornament.  
Do not turn the source into generic ornate brassware.

If the source contains figures, objects, architecture, animals, or decorative elements, rebuild them through Pembarthi metal logic:  
sheet support,  
engraved contour,  
raised and recessed relief,  
polished but hand-authored finish,  
and ornamental object discipline.

Do not leave the environment as neutral realism.  
Do not make it cast-metal or machine-made.

The final image must feel like a genuine Pembrothi sheet-metal world from Telangana, not a modern image decorated with brass ornament.

## V2 — Artisan Translation

### Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of Pembrothi from Telangana.

This is not a literal brass-craft mockup.  
This is not product photography.  
This is not a metal-texture exercise.  
This is not generic handcrafted décor.  
This is not realism-first ornate brass rendering.

Preserve the same deep Pembrothi grammar unchanged:  
worked brass/copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object and temple-object logic,  
polished hand-authored metal finish,  
and whole-object Pembrothi coherence.

Now re-author that same grammar into a richer, more inventive, more dimensional 2D + 3D hybrid image-form.

The added dimensionality must come from Pembrothi's own logic:  
sheet-to-relief relation,  
hammered rise and recession,  
engraved contour hierarchy,  
support-backed metal shaping,  
ornamental density control,  
object-surface articulation,  
polish over hand-work,  
and full-frame metal-craft intelligence.

Do not only increase shine.  
Do not only add metal texture.  
Transform the full image logic:  
form,  
construction,

grouping,  
silhouette,  
objects,  
environment,  
spatial organization,  
and full-frame visual language.

If figures appear, they must not remain generic figures rendered in brass.  
They must become Pembrothi-born presences:  
face logic shaped by sheet-metal relief discipline,  
body logic shaped by engraved contour and embossed plane structure,  
silhouettes built through worked-metal ornament and prestige-object authority,  
props and symbols translated into the same hand-worked metal system.

If environment appears, it must not remain neutral realism.  
It must already begin to feel re-authored by Pembrothi:  
sheet-metal world logic,  
relief-built spatial rhythm,  
ornamental surface hierarchy,  
prestige-object environment intelligence,  
not just normal scenery with brass ornament inside it.

Believable depth must come from Pembrothi itself,  
not from default realism,  
not from product-shot lighting,  
not from generic 3D metal rendering.

Keep:  
source-rooted Pembrothi identity,  
worked-sheet support logic,  
embossed and engraved hierarchy,  
hand-authored finish,  
creative artisan translation,  
prestige-object control,  
full-frame style authorship.

Do not allow:  
cast-metal realism,  
machine-stamped patterning,  
generic brass décor,  
flat engraving with extra shine,  
literal metal mockup behavior,  
or a normal image underneath with Pembrothi decoration added later.

The final result must feel like Pembrothi itself has creatively re-authored the image into a richer, more dimensional, more inventive sheet-metal world while still remaining fully Pembrothi-born.

## Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / IMAGE FIELD] in V2 = authentic handcrafted dimensional translation of Pambarthi from Telangana.

Preserve these unchanged deep style-core rules:

worked brass/copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object logic,  
polished hand-authored finish,  
whole-object Pambarthi coherence.

Translate the image like this:

[MAIN FIGURE / MAIN OBJECT / MAIN FIELD] becomes a Pambarthi-born dimensional presence built through sheet support, embossed hierarchy, engraved contour, and ornamental prestige-object control.

[SECONDARY FIGURES / OBJECTS / SUPPORTING ELEMENTS] become supporting Pambarthi presences governed by the same hand-worked sheet-metal system.

[ENVIRONMENT / BACKGROUND / WORLD] becomes a creatively re-authored Pambarthi space where grouping, depth, and spatial rhythm come from relief-built metal logic rather than neutral realism.

Increase:

dimensional presence,  
sheet-to-relief relation,  
engraved contour hierarchy,  
hammered depth,  
ornamental density control,  
inventive Pambarthi world-building.

Do not lose:

sheet-metal identity,  
lac-backed handwork memory,  
embossed relief structure,  
hand-authored finish,  
prestige-object authority,  
full-frame Pambarthi control.

Avoid:

brass-object mockup,  
product realism,  
cast-idol drift,  
machine-stamped metal,  
generic brass décor,

or a realistic world with Pembrothi decoration added afterward.

The final image must feel like the same Pembrothi grammar has been creatively translated into a richer, more dimensional, more scene-capable visual form.

## **Image-to-Image**

Convert this source image into a V2 authentic handcrafted dimensional Pembrothi world from Telangana.

Preserve the source image's main action, subject count, pose relations, and overall readability, but rebuild the entire image through Pembrothi grammar translated into a richer, more dimensional, more inventive hybrid image-form.

Replace ordinary image logic with:  
worked brass/copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object logic,  
polished hand-authored finish,  
and full-frame Pembrothi coherence.

Do not simply add metallic shine.  
Do not just emboss the surface.  
Do not make it a decorative brass-object mockup.

Rebuild the image so that:  
forms are organized through Pembrothi's own sheet-and-relief logic,  
depth comes from embossed rise, engraved contour, and worked-metal structure,  
objects and environments begin to behave like a Pembrothi-authored world,  
and the whole frame feels generated by Pembrothi itself rather than realism with ornament added on top.

If figures appear, rebuild them as Pembrothi-born presences rather than generic forms turned metallic.  
If objects or environments appear, rebuild them through Pembrothi visual ontology rather than neutral realism.

The final image must feel like a true creative artisan translation of Pembrothi into a richer dimensional sheet-metal world, not a normal image with ornate brass styling.

# V3 — 3D / Realistic / Cinematic Translation

## Universal Hard Prompt

Create an image in V3 = fully resolved believable real-world 3D translation of Pembrothi from Telangana while keeping the same source grammar unchanged.

This is not realism replacing style.  
This is not product photography.  
This is not premium brass-object realism.  
This is not generic temple-brass décor.  
This is not a normal world with Pembrothi ornament added afterward.

Preserve the same deep Pembrothi grammar unchanged:  
worked brass/copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object and temple-object logic,  
polished hand-authored metal finish,  
and whole-object Pembrothi coherence.

Now push that same grammar into its most complete, most fully embodied, most fully resolved, most fully inhabitable dimensional world state.

The entire visible world must be generated by Pembrothi logic.

That means the transformation must affect everything:  
surfaces,  
supports,  
figures,  
faces,  
bodies,  
objects,  
props,  
ornamental structures,  
ground,  
architecture,  
plants,  
empty space,  
environment rhythm,  
foreground,  
midground,  
background,  
and the full-frame visual language.

Nothing important may remain generic realism.

Pembarthi must control reality through its own logic:  
sheet-metal support intelligence,  
hammered relief hierarchy,  
engraved contour order,  
ornamental prestige-object structuring,  
hand-worked polish,  
temple/object authority,  
and full-world metal-craft ontology.

Believable here must mean:  
believable volume,  
believable spatial relation,  
believable material embodiment,  
believable environmental completion,  
believable inhabitable world logic.

It must not mean:  
cast-metal realism,  
normal brassware realism,  
product-shot rendering,  
generic luxury metal décor,  
industrial stamping perfection,  
or realism-first image making.

If figures appear, they must be fully Pembarthi-born:  
face construction shaped by relief and contour hierarchy,  
body logic shaped by worked-sheet-metal discipline,  
silhouettes controlled by ornamental embossed structure,  
objects and props integrated into the same Pembarthi metal ontology.

If environment appears, it must also be fully Pembarthi-born:  
ground, structures, objects, space, and atmosphere must all belong to one uninterrupted Pembarthi world,  
not a normal realistic environment underneath.

If you remove decorative cues, the image should still feel Pembarthi through:  
support construction,  
surface logic,  
object logic,  
environment logic,  
spatial organization,  
hand-worked relief hierarchy,  
and full-world sheet-metal ontology.

Keep:  
same deep Pembarthi grammar,  
full world embodiment,  
full environmental completion,

stronger figure-ground hierarchy,  
stronger spatial separation,  
stronger object presence,  
stronger total-frame style control.

Do not allow:  
cast-idol realism,  
generic brass décor realism,  
product styling,  
machine-stamped perfection,  
flat engraved metal styling,  
or any second visual language stronger than Pembrothi.

The final result must feel like Pembrothi itself has taken over the whole visible world and fully generated reality through sheet-metal ornamental craft logic, not like realism with Pembrothi decoration.

## **Reusable Variable Template**

Create [SUBJECT / SCENE / OBJECT / WORLD] in V3 = fully resolved believable real-world 3D translation of Pembrothi from Telangana.

Keep these unchanged deep style-core rules:  
worked brass/copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object logic,  
polished hand-authored finish,  
whole-object Pembrothi coherence.

Translate the image like this:

[MAIN FIGURE / MAIN OBJECT / MAIN FIELD] becomes a fully embodied Pembrothi-born presence generated through sheet-metal support logic, embossed hierarchy, engraved contour control, and full ornamental-object world authorship.

[SECONDARY FIGURES / OBJECTS / SUPPORTING ELEMENTS] become equally style-born Pembrothi presences.

[ENVIRONMENT / BACKGROUND / WORLD] becomes a complete inhabitable Pembrothi world where spatial structure, environmental rhythm, and full-scene organization are all controlled by the same sheet-metal craft grammar.

Increase:  
full world embodiment,  
full environmental translation,  
stronger spatial relation,  
stronger figure-ground separation,

stronger material presence,  
stronger world coherence,  
stronger full-frame Pembrothi control.

Do not lose:  
sheet-metal identity,  
lac-backed handwork memory,  
embossed relief hierarchy,  
engraved contour order,  
polished hand-authored finish,  
prestige-object authority,  
whole-world Pembrothi ontology.

Avoid:  
cast-metal realism,  
generic decorative-brass styling,  
product-shot rendering,  
machine-stamped metal,  
generic temple-brass décor,  
or a normal world with Pembrothi decoration added afterward.

The final image must feel like the same deep Pembrothi grammar has fully generated an entire believable world.

## **Image-to-Image**

Convert this source image into a V3 fully resolved believable real-world Pembrothi world from Telangana.

Preserve the source image's main action, subject count, pose relations, and readable structure, but rebuild all visible forms through fully embodied Pembrothi grammar.

Replace ordinary realism with:  
worked brass/copper sheet identity,  
lac-backed embossing and engraving logic,  
hammered relief hierarchy,  
chiseled contour structure,  
ornamental prestige-object logic,  
polished hand-authored finish,  
and full-world Pembrothi coherence.

Do not simply turn the image into ornate brass.  
Do not just add embossed metal pattern.  
Do not leave the environment generic.

Rebuild the full image so that:

faces, bodies, objects, props, and environment all belong to the same Pembrothi  
sheet-metal ontology,  
depth comes from Pembrothi's own support-and-relief logic,  
space is organized through engraved and embossed hierarchy,  
the world becomes fully inhabitable but remains completely Pembrothi-born,  
not realism-first.

If any part of the frame remains normal realism underneath, the conversion has failed.

The final image must feel like Pembrothi itself has fully generated the entire visible world, not  
like a normal image decorated with ornamental brass craft styling.
