

Thanjavur doll - Tamil Nadu

V1 — Authentic Style

Universal Hard Prompt

Create an image in the pure authentic source-truth visual logic of Thanjavur doll from Tamil Nadu.

Treat this as a real Tamil weighted display-doll system, not as generic Indian doll craft, not as generic bobblehead décor, not as realism-first toy sculpture, not as static festival figurine styling, and not as a realistic world with one local doll added later.

Build the entire image as if it comes from true Thanjavur doll intelligence:
weighted self-righting body logic,
nodding / rocking readiness,
composite mold-built figurine construction,
assembled body parts,
rounded lower-body balance,
bright hand-painted character identity,
domestic and Golu display ecology,
and culturally anchored figure families such as Raja Rani, Chettiar-Aachi, dance dolls, and devotional/social display dolls.

The object must not read like a realistic miniature human first.
It must read like a movement-bearing weighted display doll from the beginning.

The style must control the whole frame:
face construction,
eye and mouth stylization,
rounded figurine mass,
lower-body weight,
head/body balance,
movement readiness,
painted ornament,
costume logic,
display placement,
support/base logic,
surrounding object-world,
and same-language display-world control.

If figures appear, do not build them as normal realistic humans first.
Build them as source-born display-doll presences:
type-readable,
non-photoreal in logic,

mold-built in body behavior,
and shaped by Thanjavur weighted figurine grammar rather than by realism-first anatomy.

Do not treat the branch like generic painted folk dolls.
Do not turn it into novelty bobblehead design.
Do not reduce it to bright costume paint.
Do not let realism sit underneath the doll.
Do not let the object become static and statue-like.

The image must still feel like Thanjavur doll:
weighted movement-body truth,
self-righting balance,
composite figurine construction,
bright character-type readability,
and Golu/domestic display identity.

Preserve true branch identity:
balance-first,
movement-first,
figurine-first,
type-first,
display-first,
and same-language world logic.

Do not make it:
generic Indian doll craft,
generic bobblehead décor,
realistic collectible doll,
static decorative figurine,
papier-mâché mood only,
or realism with one local doll used as flavor.

The final image must feel like the original Thanjavur doll system itself made this image.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in the pure authentic source-truth visual logic of Thanjavur doll from Tamil Nadu.

Treat the style as a weighted display-doll system built from:
self-righting lower-body balance,
nodding / rocking readiness,
composite mold-built body construction,
assembled figurine logic,
bright hand-painted finish,
clear character-type identity,

and domestic/Golu display placement.

Core style system to preserve:

movement-body truth,
weighted figurine identity,
composite molded construction,
rounded lower-body mass,
bright painted character readability,
type-family clarity,
Tamil-rooted Thanjavur doll intelligence,
whole-frame consistency.

Translate the image like this:

[MAIN FIGURES] must become weighted display-doll presences, not normal people
[FACES] must become painted, simplified, type-readable, and non-photoreal
[BODIES / POSTURE] must obey self-righting figurine logic rather than realism-first anatomy
[COSTUME / ACCESSORIES] must function as character-type markers, not realism-textile simulation
[PROPS / SUPPORTS] must feel display-doll-compatible, not generic realistic objects
[GROUND / DISPLAY SURFACES] must become doll-display space, not generic room flooring
[ENVIRONMENT / BACKGROUND] must also inherit the same weighted display-doll language

Keep:

weighted balance,
movement readiness,
composite figurine truth,
type clarity,
bright painted display identity,
Golu/domestic display anchoring,
same-language world control.

Avoid:

generic painted doll craft,
generic bobblehead,
realistic toy sculpture,
static figurine styling,
generic festival display figures,
or one local doll inside an unstylized world.

The final result must feel like true Thanjavur doll logic itself generated the whole image.

Image-to-Image

Convert this source image into the pure authentic source-truth visual logic of Thanjavur doll from Tamil Nadu.

Preserve the source image's subject count, main action, pose relationships, and basic readability,
but rebuild the entire image through real Thanjavur weighted display-doll intelligence.

Replace normal realism with:
weighted self-righting body logic,
nodding / rocking readiness,
composite mold-built figurine construction,
assembled doll-body identity,
bright hand-painted type definition,
and Golu/domestic display-world presence.

Do not merely add bright paint.
Do not merely add a bobbling head.
Do not keep realistic anatomy while only the surface becomes doll-like.
Do not keep realistic environment logic while only one figure becomes local.

Rebuild:
faces as Thanjavur doll faces,
bodies as weighted display-doll bodies,
costumes as painted type-markers,
supports as doll-display supports,
space as display-figurine space,
and the whole frame as one Thanjavur-doll-authored visual language.

The final result must feel like the source image has been completely re-authored by authentic Thanjavur doll logic, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in V2 = authentic handcrafted dimensional translation of Thanjavur doll from Tamil Nadu.

Preserve the same deep source grammar of the style:
weighted self-righting body logic,
nodding / rocking readiness,
composite mold-built body construction,
assembled figurine logic,
rounded lower-body mass,

bright hand-painted display identity,
clear character-type families,
and Golu/domestic display presence.

Now translate that same grammar into believable handcrafted dimensional presence.

This must not become generic doll realism.

This must not become premium collectible figurine styling.

This must not become a realistic domestic scene with one local doll added later.

Dimensionality must come from the style itself:
through weighted lower-body mass,
mold-built volume,
assembled figurine structure,
painted surface over crafted body,
clear rocking-body readiness,
stronger object presence,
and stronger display-space relation.

This is not realism-first doll sculpture.

This is the same weighted movement-body gaining figurine-body depth.

Allow:

moderate volume,
clearer lower-body weight,
stronger figurine mass,
more tactile composite-body presence,
more believable rocking/nodding readiness,
handcrafted construction clarity,
and stronger relation between doll-body and display-world.

Figures or wider image-world elements, if present, must remain style-born:

not realism-first,

not collectible-toy-first,

not normal humans near a local doll.

They must inherit weighted figurine logic and same-language display-world construction.

Do not let polish fake the translation.

Do not let the environment stay generic while only one doll gains style.

Do not let realism replace Thanjavur movement DNA.

Do not let the doll become statue-like.

The whole image must feel like Thanjavur doll has entered handcrafted dimensional space without losing itself.

Reusable Variable Template

Create [SUBJECT / SCENE / OBJECT / WORLD] in V2 = authentic handcrafted dimensional translation of Thanjavur doll from Tamil Nadu.

Preserve the unchanged deep source core:

weighted self-righting body logic,
movement-bearing figurine identity,
composite molded construction,
character-type clarity,
bright painted display identity,
and Golu/domestic display ecology.

Translate the image into handcrafted dimensional form by increasing:

lower-body weight,
figurine mass,
object presence,
assembled-body readability,
paint-over-form clarity,
display-space relation,
and same-language spatial structure.

Build the image like this:

[MAIN FORMS / OBJECTS] become handcrafted dimensional presences still governed by weighted display-doll grammar

[FACES if present] remain painted, type-readable, and non-photoreal, never realism-first

[BODIES / POSTURE] gain dimensional figurine-body presence but still read as self-righting doll-bodies

[COSTUME / ACCESSORIES] gain tactile painted presence but remain type-markers, not realism-textile simulation

[SUPPORT OBJECTS] gain structure through doll-display logic, not generic realism

[GROUND / SURFACES] become display-figurine space, not generic room fill

[ENVIRONMENT / BACKGROUND] gains same-language Thanjavur doll structure, not generic domestic realism

Keep:

weighted balance,
movement readiness,
composite figurine truth,
type-family clarity,
bright painted identity,
Golu/domestic display anchoring,
same-language world control.

Avoid:

generic doll realism,
premium collectible styling,
static figurine behavior,

generic festival décor,
generic home realism with one local doll,
or one Thanjavur figure inside an unstylized world.

The final image must feel like authentic Thanjavur doll grammar translated into handcrafted figurine-body depth.

Image-to-Image

Convert this source image into V2 = authentic handcrafted dimensional translation of Thanjavur doll from Tamil Nadu.

Keep the source image's subject count, core action, and readability,
but rebuild the entire image through Thanjavur weighted display-doll grammar translated into handcrafted dimensional form.

The image must no longer behave like generic doll realism.

Replace that with:

weighted self-righting body logic,
nodding / rocking readiness,
composite mold-built construction,
assembled figurine identity,
bright hand-painted type definition,
and display-doll object-world presence.

Add:

moderate dimensional presence,
clear lower-body weight,
strong figurine mass,
tactile composite-body presence,
and handcrafted display-space logic.

But do not let dimensionality come from generic realistic doll rendering.
Do not keep normal environment or figures while only one doll becomes local.

Rebuild all visible elements so they feel born from Thanjavur doll logic.
The result must feel like the source image has entered the branch's handcrafted figurine world, not that a local doll has been placed into an ordinary scene.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create an image in V3 = fully resolved believable real-world 3D translation of the same source grammar of Thanjavur doll from Tamil Nadu.

Keep the authentic Thanjavur weighted display-doll system unchanged and push it into its most complete, most embodied, most scene-capable, most volumetric image-world.

This is maximum world-depth, not realism replacement.

Preserve the same unchanged deep Thanjavur core:

weighted self-righting body logic,
nodding / rocking readiness,
composite mold-built body construction,
assembled figurine identity,
bright hand-painted display finish,
clear character-type families,
and Golu/domestic display-world logic.

Important:

do not create generic domestic realism,
do not create premium collectible-doll realism,
do not create a normal room with one local doll added later,
do not create generic festive décor realism.

The entire world must be rebuilt through Thanjavur doll logic.

Every visible category must become source-born:

faces,
bodies,
heads,
lower-body masses,
supports,
display surfaces,
grouped figurine arrangements,
foreground, midground, background,
negative space,
and spatial rhythm.

Believable real-world 3D here means:

believable weighted lower-body mass,
believable self-righting balance,
believable composite-body material behavior,
believable painted figurine presence,
believable display-space logic,
believable doll-world scene logic.

But the style must still control:

face design,
body design,

balance logic,
movement readiness,
type identity,
painted character clarity,
environment logic,
and scene organization.

Increase:
full same-style world embodiment,
full spatial completion,
full object presence,
full environmental completion,
strong figure-ground separation through display-doll logic,
strong readability through Thanjavur doll logic,
strong whole-frame coherence through weighted figurine logic.

Absolute rule:
the Thanjavur doll system must not decorate the world.
the Thanjavur doll system must generate the world.

The environment must not be generic realism with local dolls later.
The objects must not be generic home décor with one nodding figure.
The bodies must not be realism-first miniatures.
Everything must feel reconstructed by the Thanjavur weighted display-doll system itself.

Do not introduce:
generic realism,
premium collectible styling,
generic festive-tableau realism,
or a second visual language stronger than the source grammar.

The final image must feel like:
the same Thanjavur doll style itself has become a fully embodied complete display-figurine world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in V3 = fully resolved believable real-world 3D translation of the same source grammar of Thanjavur doll from Tamil Nadu.

Keep the authentic Thanjavur weighted display-doll system unchanged and push it into maximum world-depth.

Preserve the same unchanged deep core:
weighted self-righting body logic,

movement-bearing figurine identity,
composite molded construction,
character-type clarity,
bright painted display identity,
and Golu/domestic display ecology.

Important:

the whole world must be rebuilt through Thanjavur doll logic.
Do not keep normal realism and then add Thanjavur flavor later.

Build the image like this:

[MAIN FORMS / OBJECTS] must become source-born weighted display-doll presences, not normal objects with local styling
[FACES if present] must become painted type-faces, not default human realism
[BODIES if present] must become self-righting figurine-bodies, not generic miniature people
[SUPPORT OBJECTS / DISPLAY OBJECTS] must become Thanjavur-doll-world constructions, not generic shelf décor
[GROUND / SURFACES] must become display-figurine space, not generic room flooring
[ENVIRONMENT / BACKGROUND] must become same-language Thanjavur doll world-space, not generic domestic realism

Believable real-world 3D here means:

believable weighted body mass,
believable balance,
believable composite-body materiality,
believable painted figurine presence,
believable display-world coherence.

Increase:

full world embodiment,
full spatial completion,
full object presence,
full environmental completion,
strong figure-ground separation,
strong scene readability,
strong whole-frame orchestration.

Keep unchanged:

movement-body truth,
weighted balance,
composite figurine identity,
type-family clarity,
display-culture anchoring,
same-language world control.

Avoid:

generic realism,
premium collectible-doll styling,

generic festive décor,
static figurine logic,
style only in bright paint,
or any second visual language overpowering the source grammar.

The final image must feel like:
the same Thanjavur doll grammar itself has become a believable display-figurine world.

Image-to-Image

Convert this source image into V3 = fully resolved believable real-world 3D translation of the same source grammar of Thanjavur doll from Tamil Nadu.

Preserve the source image's subject count, core action, scene purpose, and main relationships,
but rebuild every visible element through Thanjavur weighted display-doll intelligence fully embodied as reality.

Keep the authentic branch unchanged and push it into maximum world-depth.

Replace ordinary realism with:
weighted self-righting body logic,
nodding / rocking readiness,
composite mold-built figurine construction,
assembled doll-body identity,
bright hand-painted type definition,
and same-language Golu/domestic display-world construction.

Do not keep a normal room and add a Thanjavur doll later.
Do not keep generic people and miniaturize them later.
Do not keep generic décor objects and only localize one centerpiece.
Do not let the style survive only in bright paint or a wobbling head.

Rebuild:
faces as Thanjavur doll faces,
bodies as weighted display-doll bodies,
supports as display-doll supports,
space as doll-display space,
environment as same-language Thanjavur world-space,
and the whole frame as one uninterrupted Thanjavur doll scene-world.

Expand the source into:
full weighted-object embodiment,
full display-world presence,
full environmental completion,
coherent material-light behavior,
clear spatial separation,

and complete scene readability,
but only through Thanjavur doll grammar.

Absolute rule:
the Thanjavur doll system must generate the world, not decorate the world.

The final result must feel like:
the same Thanjavur doll style itself has become a believable fully embodied display-figurine world.
If it feels like reality coated with Thanjavur doll flavor, it has failed.
