

palm mat - Andaman & Nicobar

V1 — Authentic Style

Universal Hard Prompt

Create a fully self-contained image in the pure authentic source-truth visual grammar of Palm mat craft from Andaman & Nicobar, specifically the Nicobari woven mat tradition.

Build the result from real woven leaf-strip logic. The main form must feel made from interlaced pandanus leaves and coconut stem strips, not from printed pattern and not from generic textile design. The object must read as a real mat-field: flat or mostly flat, flexible, spreadable, bounded, soft, light, cool, slightly glossy, and clearly handmade.

Use real woven-surface grammar:
light and dark leaf strips interwoven into pattern,
visible strip rhythm,
clear interlacement,
field-based surface organization,
border containment,
natural pale leaf tones and darker woven contrast,
soft but controlled woven texture,
slight plant-surface sheen.

Keep the result close to native source behavior: a domestic mat for sitting, sleeping, or wall use. Let the pattern come from the weaving itself. The style must feel material-born and weave-born, not decorated afterward.

Do not make it a beach mat, printed rug, coir mat, bamboo/cane basket weave, generic tropical décor, boho interior accessory, or a normal flat surface with palm texture pasted on later.

Reusable Variable Template

Create [MAT / WOVEN SURFACE / DOMESTIC LEAF-WOVEN OBJECT / WALL-MAT FORM] in the pure authentic source-truth visual grammar of Palm mat craft from Andaman & Nicobar.

The full result must be built from real woven leaf-strip logic:
pandanus leaf strips,
coconut stem strips,
light and dark interwoven bands,

visible weave rhythm,
flat or mostly flat mat-field body,
border-contained woven surface,
soft-light-cool slightly glossy plant-material behavior.

Show [MAIN OBJECT USE / ARRANGEMENT / SPREAD CONDITION / WALL CONDITION]. Keep the result simple, source-faithful, functional, woven, and domestically grounded. Let the pattern arise from interlacement, strip direction, and light-dark contrast, not from printing or painted motifs.

Do not turn it into a generic tropical mat, decorative rug, textile print, bamboo/cane weave object, coir surface, resort accessory, or normal object with leaf texture added on top.

Image-to-Image

Use the input image only for broad object identity, layout, arrangement, and function. Rebuild the entire result in the pure authentic source-truth visual grammar of Palm mat craft from Andaman & Nicobar.

Transform the full object so it feels physically made from interwoven pandanus leaves and coconut stem strips. Replace all generic material behavior with true mat-weaving logic:
visible interlaced strip construction,
light and dark woven contrast,
flat woven field,
soft-light-cool mat-body behavior,
slight glossy plant-surface finish,
and clear border-contained mat structure.

Preserve the broad purpose of the source object, but replace the full material and surface system with authentic Nicobari woven mat logic. The result must feel like a real handmade mat object, not a printed rug or tropical décor item.

Do not apply leaf texture only. Do not keep cloth-rug logic, coir logic, bamboo/cane basket logic, or generic woven-product logic underneath.

V2 — Artisan Translation

Universal Hard Prompt

Create a fully self-contained image in the authentic handcrafted dimensional translation of Palm mat craft from Andaman & Nicobar.

Do not treat this as generic 3D uplift. Keep the same source mat grammar intact and deepen it through richer handcrafted surface-depth. The result must still be built from interwoven

pandanus leaves and coconut stem strips, but now with stronger tactile strip presence, clearer interlacement, stronger border definition, richer light-dark field hierarchy, and more readable handcrafted surface embodiment.

Use the same source truth:
woven mat-field first,
light and dark leaf-strip patterning,
soft-light-cool mat-body character,
slight glossy plant-surface finish,
domestic-use woven surface intelligence.

Increase dimensional readability through:
clearer strip overlap,
subtle woven relief,
stronger field layering,
better edge containment,
more tactile plant-material presence,
and clearer foreground/midground relation within the woven surface itself.

The result must still feel like artisans deepened the same Nicobari mat tradition, not like a premium designer rug. Keep it weave-born, material-born, calm, and source-rooted.

Do not make it a luxury floor rug, textile product render, beach-resort accessory, generic woven décor object, or a normal surface with nicer palm patterning added later.

Reusable Variable Template

Create [MAT / WOVEN SURFACE / LEAF-WOVEN FIELD / DOMESTIC MAT OBJECT] in the authentic handcrafted dimensional translation of Palm mat craft from Andaman & Nicobar.

Build the full result through the same source grammar:
interwoven pandanus strips,
coconut stem strip logic,
light and dark woven contrast,
flat but tactile field structure,
soft-light-cool mat-body behavior,
slight glossy plant-surface quality,
clear woven borders.

Show [MAIN USE / ARRANGEMENT / SURFACE CONDITION / DISPLAY OR DOMESTIC CONTEXT], but deepen the result through stronger strip readability, richer woven relief, clearer field hierarchy, stronger border articulation, and more tactile handcrafted presence.

The mat must still feel source-rooted and domestically truthful. The added depth must come from weave intelligence and plant-material structure, not from generic design polish.

Do not turn it into a premium rug, printed textile, coir doormat, bamboo/cane basket surface, boho décor object, or tropical accessory styling.

Image-to-Image

Use the input image only for broad object identity, arrangement, scale, and surface intention. Rebuild the full result in the authentic handcrafted dimensional translation of Palm mat craft from Andaman & Nicobar.

Transform all important visible parts into true woven leaf-mat logic:
interlaced pandanus and coconut-stem strip behavior,
light and dark woven field contrast,
clear strip rhythm,
subtle woven relief,
soft-light-cool mat-body feel,
slight glossy plant-surface finish,
and clean border-contained mat structure.

Increase tactile surface-depth, interlacement clarity, field organization, and woven presence while keeping the same source grammar unchanged. The final result must feel like a richer handcrafted Nicobari mat, not a designer rug or generic woven product.

Do not apply palm texture only. Do not keep textile, printed rug, coir, cane/bamboo, or generic décor logic underneath.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a fully self-contained complete world in the fully resolved believable dimensional-world translation of Palm mat craft from Andaman & Nicobar.

This is not a cinematic makeover and not generic realism with one local mat inserted. Keep the same source grammar unchanged:

interwoven pandanus leaves,
coconut stem strips,
light and dark field contrast,
mat-surface identity,
soft-light-cool woven behavior,
slight glossy plant finish,
border-contained woven fields,
and domestic mat intelligence.

Build a fully resolved mat-world or woven-surface world where every important visible form still obeys the same leaf-strip interlacement logic. Increase world completion, material believability, tactile woven depth, foreground/midground/background coherence, field clarity, and whole-frame consistency, but do not introduce another design language.

The final result must feel like Nicobari mat craft itself has become a believable complete dimensional world. If the result expands beyond one mat, all major visible forms must still feel weave-born and surface-field-governed, not generic realism with local texture accents.

Do not create luxury interior styling, beach-resort realism, premium rug design, tropical décor scene-making, or a normal world with one island mat placed in it.

Reusable Variable Template

Create [MAT / WOVEN FIELD / MAT-WORLD / EXPANDED LEAF-WOVEN SURFACE SCENE] in the fully resolved believable dimensional-world translation of Palm mat craft from Andaman & Nicobar.

The full result must remain governed by one woven leaf-mat system:
pandanus and coconut-stem strip interlacement,
light-dark pattern born from weaving,
soft-light-cool mat-body behavior,
slight glossy plant-surface finish,
flat or field-led woven identity,
border-contained construction,
and Nicobari domestic craft grounding.

Show [MAIN USE / ARRANGEMENT / WORLD CONDITION / SURFACE CONDITION], but make every important visible form belong to the same woven mat grammar. Increase full-world completion, material believability, woven surface depth, near/mid/far coherence, and same-language whole-frame control compared to V2 while keeping the source style-core unchanged.

Do not make it an interior design scene, premium woven rug world, tropical resort moodboard, or generic realism with local woven accents.

Image-to-Image

Use the input image only for broad object or surface identity, arrangement, world structure, and scene readability. Rebuild the entire result as a fully resolved believable dimensional world in Palm mat grammar from Andaman & Nicobar.

Transform every important visible form into one continuous woven leaf-mat system:

interwoven pandanus strips,
coconut stem strip logic,
light and dark woven field contrast,
soft-light-cool surface behavior,
slight glossy plant finish,
border-contained mat structure,
and same-language woven field intelligence.

Preserve the broad scene meaning, but replace the full image-making system so the entire result belongs to Nicobari mat logic. The final image must feel like the craft itself has become fully real and fully complete without changing into another style.

Do not stylize one object only. Do not keep generic realism underneath. Do not make a normal room and add one mat later. Do not introduce premium rug styling, printed-textile logic, beach décor mood, or coir/bamboo/cane substitution.
