

woodcraft - Andaman & Nicobar

V1 — Authentic Style

Universal Hard Prompt

Create a fully self-contained handcrafted object image in the pure authentic source-truth visual grammar of Woodcraft from Andaman & Nicobar.

Build the object from real wood-body logic. The result must feel wood-born, not wood-themed. Use solid timber mass, carved or shaped object form, clear silhouette, refined contour, smoothed surface, warm timber material identity, visible grain memory, and finished handmade display-object presence as the primary generators of the image.

Keep the object close to true source behavior: carved figurine, bird or animal sculpture, decorative display object, souvenir-scale carved article, or another believable island woodcraft form. The object should feel compact, materially grounded, handcrafted, warm, and display-readable. Let form come from carved mass, contour control, and timber body, not from applied decoration.

Use warm wood tones such as brown, honey-brown, reddish-brown, or padauk-like timber warmth, but only as a material consequence of real wood, not as cosmetic color styling. The surface should feel smoothed and finished, not plastic, resin-like, painted, or overly glossy.

Do not make it generic rustic décor, tropical shelf styling, लकड़ी-look plastic, bamboo/cane construction, shell craft, coconut-shell craft, luxury carved décor, or a normal object with wood texture added later. The object must feel physically generated from timber mass and carving logic.

Reusable Variable Template

Create [OBJECT / OBJECT-GROUP / DISPLAY ARTICLE / FIGURINE] in the pure authentic source-truth visual grammar of Woodcraft from Andaman & Nicobar.

The full result must be built from real timber-body logic:

- solid wood mass,
- carved or shaped form,
- clean silhouette,
- refined contour,
- smoothed surface,
- warm grain-bearing timber identity,
- handmade display-object completion.

Show [MAIN OBJECT PURPOSE / FIGURE TYPE / ARRANGEMENT / DISPLAY CONDITION]. Keep the result compact, carved, materially honest, and island-handicraft-rooted. Let the form come from wood body and carving decisions. The object should feel like a real handmade wooden article from local island craft practice, not like a generic décor product.

If detail is needed, use carved refinement, contour separation, mass simplification, and polished object completion. Keep object readability stronger than decorative overwork.

Do not turn it into bamboo/cane structure, shell ornament, beach-resort styling, generic rustic brown souvenir, plastic faux-wood, luxury home décor styling, or a normal object with wood grain pasted on top.

Image-to-Image

Use the input image only for object identity, broad silhouette intention, arrangement, and function. Rebuild the full result in the pure authentic source-truth visual grammar of Woodcraft from Andaman & Nicobar.

Transform the entire object so it feels physically made from real timber mass: carved or shaped wooden body, contour-led form, smoothed carved surface, warm wood tone, visible grain memory, compact sculptural object presence, and finished handmade display readability.

Preserve the broad object role, but replace the entire material and form system with true woodcraft behavior. The result must feel like a real island handmade wooden object, figurine, or carved article, not a generic product made to look wooden.

Do not apply wood texture only. Do not keep resin, plastic, ceramic, shell, bamboo/cane, or generic product logic underneath. Do not make it tropical décor or rustic lifestyle styling. The object must become wood-born in structure and contour, not wood-decorated on the surface.

V2 — Artisan Translation

Universal Hard Prompt

Create a fully self-contained handcrafted object image in the authentic handcrafted dimensional translation of Woodcraft from Andaman & Nicobar.

Do not treat this as generic 3D uplift. Keep the same source woodcraft grammar intact and deepen it through richer handcrafted object-depth. The result must still be built from timber body, carved mass, contour-led readability, warm grain-bearing surface, and finished

display-object intelligence, but now with stronger tactile volume, clearer mass separation, more readable carved depth, and stronger object presence in dimensional space.

Use real wood behavior:
solid carved body,
subtle grain memory,
warm brown to reddish-brown timber,
padauk-like warmth where useful,
smoothed hand-finished surfaces,
contour refinement,
clear object silhouette,
and believable handcrafted sculptural presence.

Increase dimensional readability through carved depth, layered mass separation, clearer edges, more convincing object relief, and stronger spatial objecthood, but only through woodcraft logic. It should feel like skilled island artisans expanded the same branch into richer object embodiment, not like a showroom render.

Do not make it generic carved décor, premium sculpture photography, luxury shelf object, tropical design styling, cinematic prop design, or realism-first object rendering with local wood flavor added later.

Reusable Variable Template

Create [OBJECT / OBJECT-GROUP / FIGURINE / CARVED DISPLAY FORM] in the authentic handcrafted dimensional translation of Woodcraft from Andaman & Nicobar.

Build the full result through the same source woodcraft grammar:
solid timber mass,
carved or shaped form,
refined contour,
warm wood surface,
grain memory,
handmade finishing,
display-object readability.

Show [MAIN OBJECT PURPOSE / SUBJECT / ARRANGEMENT / DISPLAY CONDITION], but deepen the result through stronger tactile carved volume, clearer mass hierarchy, more readable contour transitions, stronger object presence, and richer handcrafted dimensional embodiment.

The result must still feel artisan-built from wood, not premium-commercial, not generic sculpture rendering, and not tropical décor styling. The depth must come from carving, shaping, timber body, and contour logic, not from generic rendering polish.

Do not turn it into glossy gallery-object marketing, fake rustic décor, bamboo/cane structure, shell-craft detailing, or a normal object with wood texture and extra shadows.

Image-to-Image

Use the input image only for object identity, arrangement, scale intention, and broad composition. Rebuild the full result in the authentic handcrafted dimensional translation of Woodcraft from Andaman & Nicobar.

Transform all important visible parts into true woodcraft logic:

solid carved timber body,
clean silhouette,
refined contour,
warmer grain-bearing surface,
smoothed finish,
tactile carved depth,
and stronger sculptural object presence.

Increase carved relief, mass separation, edge readability, and dimensional objecthood while keeping the exact same source grammar unchanged. The final result must feel like a richer artisan-built island woodcraft object, not a generic carved décor render.

Do not apply wood texture only. Do not keep generic product or sculpture logic underneath. Do not make it luxury décor, tropical styling, shell/bamboo crossover, or realism-first rendering with local wood accents.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a fully self-contained complete world in the fully resolved believable dimensional-world translation of Woodcraft from Andaman & Nicobar.

This is not a cinematic makeover and not generic realism with wooden accents. Keep the same source woodcraft grammar unchanged:

solid timber body,
carved mass,
contour-led form,
warm grain-bearing wood material,
smoothed hand-finished surface,
display-object readability,
and same-language woodcraft control across the full result.

Build a fully resolved wood-object ecosystem or expanded woodcraft world where every important visible form still obeys carved timber logic. Increase world completion, material believability, object presence, depth clarity, near-to-far resolution, and readable light on carved form, but do not introduce a second visual language.

The whole result must feel as if island woodcraft itself has become a believable complete dimensional world. Every important visible element must still feel wood-born: object bodies, support forms, secondary objects, grouped figurines, carved contours, and any broader environment if present.

Do not create luxury tropical interiors, cinematic art-direction worlds, generic rustic realism, glossy premium décor scenes, or a normal realistic world with one carved wooden object inserted into it.

Reusable Variable Template

Create [OBJECT / OBJECT-ECOSYSTEM / CARVED WOOD WORLD / EXPANDED DISPLAY SCENE] in the fully resolved believable dimensional-world translation of Woodcraft from Andaman & Nicobar.

The full result must remain governed by one woodcraft system:

solid timber body,
carved mass,
refined contour,
warm grain-bearing material,
smoothed finish,
display-object intelligence,
and wood-born same-language consistency.

Show [MAIN OBJECT PURPOSE / SUBJECT / ARRANGEMENT / WORLD CONDITION], but make every important visible form belong to the same carved wood grammar. Increase full-world completion, object presence, material believability, depth clarity, and near/mid/far resolution compared to V2 while keeping the same source style-core unchanged.

Do not make it tropical décor realism, cinematic mood-world, designer lifestyle styling, fake rustic product branding, or a generic realistic world with selected wooden accents.

Image-to-Image

Use the input image only for object identity, arrangement, broad world structure, and scene readability. Rebuild the entire result as a fully resolved believable dimensional world in Woodcraft grammar from Andaman & Nicobar.

Transform every important visible form into one continuous wood-born system:

solid carved timber body,
contour-led shape,
refined mass transitions,
smoothed grain-bearing wooden surface,
warm timber tone,
hand-finished display-object presence,
and same-language carved object logic.

Preserve the broad scene meaning, but replace the full image-making system so the entire result belongs to island woodcraft logic. The final image must feel like the craft itself has become fully real and fully complete without changing into another style.

Do not stylize one object only. Do not keep generic realism underneath. Do not build a normal décor world and decorate it with wooden props afterward. Do not introduce bamboo/cane weave logic, shell crossover, plastic faux-wood, or cinematic premium mood as the dominant language.
