

Kosa silk - Chhattisgarh

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful visual logic of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh**. Treat this as a **regional silk-cloth and handloom weaving tradition**, not as generic luxury silk, synthetic satin, festive fashion fabric, printed ethnic textile, or embroidery-first cloth. Build the image as if it comes from a real **Kosa silk world** shaped by **Kosa fiber, silk thread, weaving, garment-scale textile use, and Chhattisgarh handloom identity**.

The image must read **cloth-first**. The fabric must feel like real Kosa silk turned into woven cloth, not like a printed or coated surface. Preserve the sense of **silk-fiber origin, thread-to-cloth transformation, woven textile body, real drape, real silk softness, controlled luster, and elegant but truthful handloom material presence**. The cloth should feel materially rooted in **Kosa silk and weaving**, not just “rich and shiny.”

Use the native Kosa product world: **traditional sarees, dress materials, and woven silk cloth**. If the cloth is worn, the wearer must remain secondary to the textile. Figures must serve the readability of **silk drape, fall, border/body/end-zone behavior, and garment-scale cloth logic**, not become fashion-first or portrait-first subjects. Surface richness should grow out of **woven silk truth**, not be pasted on later as decorative effect.

Material behavior must preserve **real silk truth**: softness, luster, controlled sheen, fluid drape, woven density, and non-synthetic elegance. Composition must remain cloth-centered and drape-led. Ornament, if present, must remain textile-native and subordinate to the woven silk identity.

Do not make this generic festive silk, satin glamour, luxury fashion silk, print-first fabric, embroidery-first ethnic cloth, or synthetic shiny drapery. Do not lose Kosa identity. Do not lose the woven-cloth truth. Do not let fashion styling overpower textile truth.

Reusable Variable Template

Create [SUBJECT / GARMENT / CLOTH FIELD / TEXTILE SCENE] in the **authentic source-faithful visual logic of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh**.

Treat the style as a **regional silk handloom textile system** built from:

- Kosa silk fiber identity
- silk thread becoming woven cloth
- handloom textile construction
- saree / dress-material objecthood
- softness, shine, luster, and elegant drape
- Chhattisgarh regional grounding
- cloth-first visual hierarchy

Preserve these non-negotiable style rules:

- the result must feel like real Kosa silk, not generic silk
- the cloth must feel woven, not printed-first
- the fabric must remain garment-scale and usable
- drape and fall must remain central
- silk softness and luster must feel natural, not synthetic
- the textile must remain stronger than styling around it
- the whole image must behave like a Kosa cloth field

Translate the subject like this:

- **[MAIN GARMENT / MAIN CLOTH FORM]** becomes the dominant Kosa silk woven presence
- **[SECONDARY GARMENTS / SUPPORT TEXTILES / ACCESSORIES]** become subordinate woven silk elements with the same cloth truth
- **[FIGURES]** become supports for textile readability rather than portrait-first subjects
- **[SUPPORT SPACE / CONTEXT]** remains minimal and subordinate, only enough to strengthen Kosa cloth truth

Keep:

- Kosa silk identity
- woven textile behavior
- saree / dress-material objecthood
- silk softness and luster
- Chhattisgarh handloom grounding
- cloth-first composition

Avoid:

- generic luxury silk
- synthetic satin look
- print-first ethnic fabric
- embroidery-first styling
- fashion spectacle
- surface richness detached from weave truth

Image-to-Image

Convert this source image into the **authentic source-faithful visual logic of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh**.

Preserve the source image's **subject count, main cloth relationships, pose logic, silhouette logic, and overall readability**, but rebuild the entire image as a **Kosa woven silk textile system**. Replace ordinary fabric behavior with **Kosa silk identity, real woven-cloth construction, garment-scale textile truth, silk softness, controlled luster, and Chhattisgarh handloom presence**.

If the source contains a wearer, do not merely dress the figure in shiny silk. Rebuild the textile so it behaves like **real Kosa cloth**, with drape, weight, sheen, and woven truth. If the source contains borders, end-zones, or garment transitions, make them feel cloth-born and silk-native. If the source contains background or setting, it must stay subordinate to the textile so the whole image still feels generated by Kosa cloth intelligence.

Do not simply make the image silky. Do not add shine to a normal fabric. Do not turn it into generic festive silk fashion or printed ethnic textile. The final result must feel like the source image has been fully rebuilt through authentic Kosa silk handloom logic.

V2 — Artisan Translation

Universal Hard Prompt

Create an image in the **authentic handcrafted dimensional visual logic of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh**. Keep the full source grammar intact, but translate it into a richer handcrafted dimensional cloth-world. This version must still feel completely **woven-silk-born and handloom-born**, not glamour-born and not synthetic luxury styling.

Preserve the full source grammar: **Kosa silk fiber identity, silk thread becoming woven cloth, saree / dress-material scale, handloom textile truth, silk softness, controlled luster, and Chhattisgarh regional grounding**. Then allow the cloth to become more tactile, more materially present, and more spatially articulated while still remaining unmistakably Kosa.

The fabric must still feel first woven from silk thread. The surface must still feel like real cloth, not coated glamour. The textile may gain richer fold depth, stronger drape articulation, clearer border/body/end-zone relationships where relevant, and deeper material-light interaction, but it must still remain **woven-cloth truth first**. If figures appear, they must

remain secondary to the textile and exist mainly to reveal how Kosa cloth falls, wraps, folds, and shines.

Material behavior should preserve a soft silk body with subtle handloom individuality, controlled sheen, tactile cloth depth, and visible textile truth. Ornament, if present, must remain textile-native and integrated. Composition must still remain cloth-centered, drape-led, and process-aware.

Do not make this a polished luxury-fashion render, glossy satin styling, generic designer saree visualization, or realism-first fashion image. Do not let dimensionality erase fiber ancestry, woven-cloth truth, or handloom identity.

Reusable Variable Template

Create **[SUBJECT / GARMENT / CLOTH FIELD / TEXTILE SCENE]** in the **authentic handcrafted dimensional visual logic of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh**.

Treat the style as a **regional silk handloom textile system** and translate it into a richer handcrafted dimensional world while preserving these non-negotiable rules:

- the fabric still feels like Kosa silk
- the cloth still feels woven, not print-led
- handloom ancestry still remains visible in spirit
- saree / dress-material objecthood still remains true
- silk softness and luster still behave naturally
- the textile remains stronger than styling around it
- the whole image remains cloth-first, not fashion-first

Translate the subject like this:

- **[MAIN GARMENT / MAIN CLOTH FORM]** becomes a richer tactile Kosa woven presence
- **[SECONDARY GARMENTS / SUPPORT TEXTILES / ACCESSORIES]** become subordinate woven silk presences with matching cloth logic
- **[FIGURES]** become supports for drape readability, not portrait-first subjects
- **[SURFACE DETAIL / ZONE DETAIL]** becomes woven-cloth depth, border/body/end-zone articulation, fold rhythm, and handloom-sensitive silk behavior
- **[SUPPORT SPACE / CONTEXT]** becomes a restrained field that strengthens handcrafted textile presence

Let these become richer:

- cloth tactility

- fold depth
- drape weight and flow
- silk-light interaction
- border/body/end-zone clarity
- handloom cloth legibility

Keep unchanged:

- Kosa silk identity
- woven cloth truth
- saree / dress-material scale
- Chhattisgarh grounding
- silk softness and luster

Avoid:

- polished luxury-fashion rendering
- synthetic shine
- satin glamour
- decorative ethnic styling
- print-first surface treatment
- environment overpowering the textile

Image-to-Image

Convert this source image into the **authentic handcrafted dimensional visual logic of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh.**

Preserve the source image's **main cloth relationships, silhouette logic, pose logic, and readability**, but rebuild the full image through a **dimensional Kosa woven textile system**. Replace ordinary fabric behavior with **Kosa silk identity, woven-cloth construction, handloom-sensitive drape, garment-scale textile truth, and naturally lustrous silk presence**.

Allow the image to gain richer tactile depth, stronger fold articulation, more visible cloth weight, and more dimensional textile presence than the source-faithful version, but keep the style fully cloth-first. Every garment, accessory, fold, and edge must still feel like Kosa silk handloom cloth rather than a generic fashion fabric with ethnic styling.

Do not silk-texture a normal garment and call it done. Do not turn the scene into decorative designer fashion or glossy saree illustration. The final result must feel like the source image has been rebuilt through a handcrafted dimensional Kosa cloth intelligence.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **fully volumetric cinematic translation of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh**. Convert the complete source grammar into a believable three-dimensional cloth-world while keeping **Kosa textile intelligence** in control. This must not become generic luxury silk fashion, synthetic satin realism, or festive ethnic glamour. It must feel like **a Kosa woven-cloth world became real**.

Keep the full source grammar intact: **Kosa silk fiber identity, silk thread, woven-cloth construction, handloom ancestry, saree / dress-material objecthood, softness, luster, elegant drape, and Chhattisgarh regional grounding**. Then translate that grammar into full volume: stronger cloth mass, richer spatial staging, clearer figure-ground separation where needed, deeper textile-world coherence, and cinematic readability — but only under the authority of the woven silk system.

Preserve the origin-material memory. By default, render the world as if it grows directly out of **Kosa fiber, silk thread, handloom weaving, garment-scale cloth construction, and real silk drape behavior**. Even in full 3D, the world must still visibly remember **fiber, thread, weaving, and cloth**. The result must not become glossy CGI satin, synthetic fashion silk, generic designer drapery, or luxury textile spectacle. It must still feel like a **process-born handloom cloth world**.

The cloth must still govern the scene. Sarees, dress materials, drapes, folds, and textile fields must still behave as **Kosa silk presences**, not as ordinary realistic wardrobe. The world must not merely host the style; the world must feel generated by the style's woven silk intelligence.

Do not create generic festive silk glamour, designer-fashion realism, synthetic satin drapery, glossy couture fabric worlds, or ordinary realism with “ethnic silk” added later. Do not let shine replace weave truth. Do not erase handloom ancestry. Do not let environment overpower the cloth.

Reusable Variable Template

Create [SUBJECT / CLOTH WORLD / GARMENT / TEXTILE SCENE] as a **fully volumetric cinematic translation of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh**.

Treat the style as a **regional silk handloom textile system** and translate it into a believable three-dimensional world without losing these non-negotiable rules:

- the fabric still feels like Kosa silk
- woven-cloth truth remains active in the final image
- handloom ancestry remains visible in material memory
- saree / dress-material objecthood remains intact
- silk softness, luster, and drape remain natural
- the textile remains stronger than the environment around it
- the whole frame remains governed by cloth intelligence

Material-origin rule:

- default to **fiber + thread + weaving + cloth origin memory**
- preserve Kosa silk fiber ancestry, thread formation, woven-cloth construction, handloom truth, garment-scale drape, and natural silk material behavior
- keep the silk tactile, process-born, elegant, and non-synthetic
- even in full 3D, the world must still feel **born from weaving**, not from fashion-image styling

Translate the subject like this:

- **[MAIN GARMENT / MAIN CLOTH FORM]** becomes the dominant volumetric Kosa woven presence
- **[SECONDARY GARMENTS / SUPPORT TEXTILES / ACCESSORIES]** become subordinate cloth presences with matching process-born logic
- **[SURFACE DETAIL / ZONE DETAIL]** becomes volumetric weave truth, fold rhythm, border/body/end-zone articulation, and handloom-sensitive silk movement
- **[ENVIRONMENT / SUPPORT SPACE]** becomes a cinematic but still cloth-governed Kosa textile world

Increase:

- cloth volume and weight
- figure-ground separation where needed
- silk-light interaction
- drape and fold depth
- spatial readability
- world-scale textile coherence

Do not lose:

- Kosa silk identity
- woven cloth truth
- handloom ancestry
- saree / dress-material objecthood
- Chhattisgarh regional grounding
- process-memory stronger than glamour

Avoid:

- generic luxury silk realism

- synthetic satin styling
- festive fashion spectacle
- designer-fabric glamour
- polished CGI silk
- realism overpowering cloth truth

Image-to-Image

Convert this source image into a **fully volumetric cinematic translation of Kosa Silk Handloom / Weaving Tradition from Chhattisgarh.**

Preserve the source image's **subject count, main cloth relationships, silhouette logic, pose logic, and scene readability**, but rebuild the entire frame as if **Kosa textile grammar became a cinematic three-dimensional world**. Replace ordinary fabric and garment logic with **Kosa silk identity, thread-to-cloth weaving, handloom ancestry, real drape behavior, silk softness and luster, and Chhattisgarh regional textile intelligence.**

Then expand that structure into full volume: stronger cloth mass, richer fold relief, clearer spatial staging, deeper material-light interaction, and fuller textile-world completion. But every part of the frame must still obey Kosa law. The cloth must remain cloth-first. The surface must still feel process-born. The world must still read as a woven-cloth world made real, not as ordinary realism with elegant silk added later.

Do not simply turn the source image into shiny silk. Do not add festive richness to a normal fabric. Do not make it designer-fashion cinema or synthetic luxury styling. Do not lose the origin-material memory of **Kosa fiber, thread, weaving, and garment-scale cloth truth.**

The final image must feel like the source image has been fully rebuilt through **fully volumetric Kosa handloom intelligence with process-memory, cloth-truth, and Chhattisgarh textile meaning all intact.**
