

Majuli mask-Assam

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of the Majuli mask tradition of Assam, treating it as a sacred wearable performance-mask system from the Neo-Vaishnavite satra and Bhaona theatre world of Majuli, especially the Samaguri / Chamaguri Satra lineage, rather than as generic Indian folk mask art, carnival mask design, fantasy creature art, or horror-mask illustration.

Build the image as if it comes from an actual Bhaona performance object tradition. The face must be constructed as a role-readable theatrical mask used to embody mythological and devotional characters such as gods, demons, animals, birds, sages, heroes, and epic antagonists. The face must not behave like portrait realism. It should be typological, enlarged, declarative, stage-readable, and immediately identifiable from a distance. Eyes should be bold and high-contrast, mouth and jaw should be structurally expressive, and any beak, teeth, fang, snout, crown, horn, moustache, ear, animal extension, or facial exaggeration must serve mythological character recognition rather than horror spectacle.

Material logic is essential. The form must remember that Majuli masks are traditionally built from a lightweight bamboo armature and then layered with clay, cow dung, cloth, and painted finishing. The mask should feel handmade, shell-built, wearable, and structurally light rather than carved from solid wood, cast in resin, or rendered as glossy plastic. Keep matte handcrafted surfaces, subtle handmade asymmetry, layered shell memory, and breathable craft-built presence.

Color logic must remain functional and theatrical. Use vivid craft-painted character coding such as red, yellow, blue, green, white, black, and related strong stage-readable contrasts where appropriate, but keep the finish handmade and culturally grounded, not neon-digital or glossy cinematic-fantasy. Color must clarify role, not act as random decoration.

Space logic must remain performance-first. If the image includes costume, body, props, or background, the world must still feel like devotional Assamese theatre space shaped by Bhaona staging and satra culture. The mask must remain the first read. The rest of the frame should support role-recognition, presentational stance, theatrical hierarchy, and sacred narrative embodiment.

Do not make it a realistic human actor with theatrical makeup. Do not make it a horror face. Do not make it a generic mythological mask from anywhere in India. Do not make it a heavy sculptural object without wearability. Do not make it a decorative souvenir. Do not make it a normal cinematic scene with one stylized mask attached.

Reusable Variable Template

Create [SUBJECT / SCENE] in the authentic performance-mask grammar of the Majuli mask tradition of Assam.

Treat the style as a Bhaona-born wearable mask system from the Neo-Vaishnavite satra world, not as generic folk decoration or fantasy mask art.

Core style system to preserve:

- wearable ritual-theatre mask identity
- Bhaona character embodiment and stage readability
- face-first theatrical construction rather than portrait realism
- lightweight bamboo-armature and layered clay-cow-dung-cloth shell memory
- matte handmade craft surface
- vivid craft-painted role-coding
- devotional mythological performance grounding
- whole-frame consistency so all visible elements belong to the same mask-world logic

Figure logic:

[MAIN FIGURE] becomes a Majuli-style performance-mask presence built for immediate role recognition

[SECONDARY FIGURES] also obey the same theatrical mask grammar rather than realistic facial logic

[CHARACTER TYPE] should be readable through exaggerated but controlled face architecture, jaw, eyes, beak, horn, crown, teeth, moustache, snout, or other role-bearing features where relevant

Material logic:

- make the form feel shell-built and wearable, not carved from solid mass
- retain bamboo-frame and layered handmade-skin memory
- keep the finish matte, handcrafted, painted, and performance-ready

Color logic:

- use vivid hand-painted stage colors only to clarify role and theatrical identity
- avoid digital-glossy or random decorative coloring

Space logic:

[ENVIRONMENT] becomes a devotional-theatrical Assamese performance space that supports presentational staging and mask-led hierarchy

[PROPS / COSTUME / OBJECTS] must also inherit Bhaona-mask-world logic

Keep:

- stage-distance readability
- typological face design
- wearable structure
- handmade shell memory
- devotional theatre identity

Avoid:

portrait realism
generic Indian folk mask styling
carnival or festival mask language
horror-mask exaggeration
solid carved-sculpture logic
generic cinematic realism with a mask accessory

Image-to-Image

Convert this source image into the authentic visual world of the Majuli mask tradition of Assam.

Preserve the source image's subject count, core action, pose relationships, and basic scene readability, but rebuild the entire image through Bhaona performance-mask logic from the Neo-Vaishnavite satra tradition of Majuli. Replace ordinary human facial realism with wearable theatrical mask-face construction designed for mythological role recognition. Rebuild the face through enlarged stage-readable eyes, mouth, jaw, beak, snout, fang, horn, crown, moustache, animal extension, or other controlled role-defining features as appropriate to the character, while keeping the result devotional and theatrical rather than horrific or generic fantasy.

Replace ordinary material logic with the handmade memory of Majuli mask construction: lightweight bamboo armature, layered clay-cow-dung-cloth shell, matte painted surface, subtle asymmetry, and craft-built wearability. The result must not feel like solid carved wood, molded plastic, or a glossy prop.

If the source image includes body, costume, props, architecture, or background, all of them must also be translated into the same Bhaona mask-world logic. The whole frame should feel like devotional Assamese theatre space organized around role clarity, presentational stance, and performance readability.

Do not simply paste a mask onto a realistic actor. Do not keep realistic skin and add face paint. Do not turn the result into carnival mask art, horror-face fantasy, or pan-Indian myth-mask styling. Rebuild the full image so it feels born from the Majuli satra performance-mask system.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image-world rooted in the Majuli mask tradition of Assam, treating it as a Bhaona-born wearable devotional theatre mask system from the Neo-Vaishnavite

satra world rather than as generic folk mask art, carnival design, fantasy concept art, or horror imagery.

This version should remain source-rooted but can expand the Majuli grammar into a richer image system. Keep mask identity primary: role-readable theatrical face architecture, strong audience-distance clarity, handmade bamboo-armature and layered clay-cloth shell memory, vivid craft-painted character coding, and devotional mythological embodiment. The face must still be typological and performance-driven, not portrait-driven. Eyes, jaw, beak, snout, crown, horns, teeth, moustache, and other extensions should remain character-bearing stage signs, not random fantasy ornament.

Allow the image to develop a richer blend of flat theatrical clarity and dimensional presence. The body, costume, props, and environment may become more integrated with the face grammar, but the entire world must still feel mask-born. Let the scene inherit Bhaona's presentational staging, sacred theatrical hierarchy, and performative emphasis. The space can become more image-rich, but it must not become a generic cinematic fantasy set or a realistic ethnographic scene.

Material logic must remain visibly handmade. Preserve shell-built lightness, layered surface memory, matte painted finish, and crafted asymmetry. The form should feel constructed and wearable even when more spatially elaborate. Color should stay vivid and functional, clarifying role, mood, and mythic identity in a craft-painted way.

Do not turn it into generic stylized 3D character design. Do not turn it into a glossy fantasy creature. Do not turn it into a normal realistic actor wearing a decorative mask. Do not let the environment drift away from Bhaona performance logic. Do not replace devotional theatricality with spectacle-only drama.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the Majuli mask tradition of Assam.

Treat the style as a Bhaona-born wearable devotional theatre mask system from the Neo-Vaishnavite satra world, expanded into a richer image-world while remaining source-faithful at the structural level.

Preserve these style-core rules:

mask identity remains primary

face architecture stays role-readable and stage-readable

wearable shell-built logic remains visible

bamboo-armature and layered clay-cloth construction memory stays present

matte handcrafted painted surface remains intact

vivid color remains functional and theatrical

the whole frame remains inside one Majuli performance-mask world

Translate the scene like this:

[MAIN FIGURE] becomes a Majuli mask-based character presence with theatrical face architecture and controlled dimensional richness

[SECONDARY FIGURES] also obey the same devotional mask grammar instead of realistic facial behavior

[PROPS / COSTUME / OBJECTS] become extensions of Bhaona mask-world logic

[ENVIRONMENT] becomes a richer Assamese devotional theatre space shaped by presentational staging, role hierarchy, and mask-led visual order

Let these become richer:

integration of face and body

spatial layering

theatrical environment completion

extension of role-coding into the wider frame

controlled 2D + 3D blend

Keep unchanged:

wearability

handmade shell memory

Bhaona readability

devotional theatrical source identity

type-based face logic

Avoid:

generic 3D character art

fantasy monster design

horror styling

carnival-mask energy

realism-first staging

one stylized face inside a generic world

Image-to-Image

Convert this source image into a creative 2D + 3D Majuli mask translation from Assam.

Preserve the source image's subject count, core action, pose logic, and overall readability, but reconstruct the full image through the performance-mask grammar of the Majuli satra and Bhaona tradition. Replace normal face logic with theatrical role-coded mask architecture designed for mythological embodiment and stage recognition. Keep the character readable through enlarged eyes, expressive jaw, strong mouth design, beak, snout, crown, horn, fang, moustache, or other appropriate role-bearing features, but keep them within devotional-theatre grammar rather than horror or generic fantasy.

Allow the image to become more spatial and visually rich than a strictly documentary mask-object rendering, but keep every visible element inside the same Majuli mask-world logic. The body, costume, props, and environment must all inherit Bhaona staging,

presentational hierarchy, and handmade shell-based material memory. The entire scene should feel as if Majuli performance-mask intelligence generated the image-world.

Retain material memory: bamboo armature, clay-cow-dung-cloth layering, matte painted finish, wearable construction, and handcrafted asymmetry. Do not replace this with carved-solid or glossy prop logic.

Do not simply add a decorative mask to a realistic figure. Do not turn the result into festival-fantasy art, horror-creature illustration, or generic mythological concept design. Rebuild the whole image as a source-rooted but creatively expanded Majuli performance-mask world.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the Majuli mask tradition of Assam, treating it as a devotional Bhaona performance-mask system from the Neo-Vaishnavite satra world rather than as generic cinematic fantasy, ordinary realism, carnival mask art, or horror design.

The world must feel real and spatially convincing, but its realism must remain fully governed by Majuli mask grammar. Build faces through theatrical role-readable mask architecture, not portrait psychology. Keep typological mythological clarity, audience-distance legibility, expressive jaw and mouth structure, bold eyes, and appropriate role-bearing extensions such as crown, horn, fang, snout, beak, moustache, animal framing, or demon/deity attributes where needed. The face must still read as a wearable performance mask first.

Material logic is critical. Convert the traditional bamboo armature plus layered clay, cow dung, cloth, and painted finishing into believable dimensional form without losing the sense of a handmade lightweight shell. The mask must feel wearable and constructed, not carved from solid wood, cast in polished resin, or fabricated like a luxury film prop. Use tactile layered shell presence, matte craft-painted surfaces, subtle handmade irregularity, and believable light-on-surface behavior under handcrafted control.

The full frame must belong to one Majuli-derived system. Figures, bodies, costume, props, stage elements, architecture, and environment must all inherit devotional Assamese theatre logic. Space should feel like a complete inhabitable performance-world shaped by Bhaona readability, presentational hierarchy, sacred narrative embodiment, and mask-led visual organization. Color must remain vivid, functional, and craft-painted, helping role differentiation rather than slipping into glossy spectacle.

Do not make it a realistic actor wearing a Majuli-like mask. Do not make it ordinary realism plus mythological props. Do not make it horror fantasy. Do not make it a heavy sculptural mask-world without wearability. Do not let one important element belong to another visual language.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the Majuli mask tradition of Assam.

Treat the style as a Bhaona-born wearable devotional theatre mask system from the Neo-Vaishnavite satra world, translated into believable volume and space without losing mask grammar.

Style system that must remain unchanged:

wearable Majuli mask identity

theatrical role-readable face construction

typological mythological embodiment instead of portrait psychology

bamboo-armature and layered shell memory

matte handcrafted painted material behavior

vivid role-coding color logic

Bhaona-led presentational staging

whole-frame consistency across all visible elements

Translate the scene like this:

[MAIN FIGURE] becomes a fully dimensional Majuli mask-based character presence governed by theatrical face architecture

[SECONDARY FIGURES] become dimensional but still mask-world-consistent forms

[OBJECTS / PROPS] become tactile performance-world elements shaped by devotional theatre logic

[ENVIRONMENT] becomes a believable spatial field organized by Bhaona staging, sacred narrative hierarchy, and mask-led worldbuilding

Increase:

believable volume

light-material interaction

wearable body-mask integration

spatial completion

environmental depth

whole-frame cohesion

Do not lose:

mask-first identity

handmade shell memory

stage readability

devotional theatrical grounding

functional vivid color-coding

Avoid:

generic realism

actor-with-mask realism
film-prop luxury finish
horror fantasy
carnival styling
normal cinematic space with one stylized head
any non-Majuli visual language taking over the frame

Image-to-Image

Convert this source image into a full 3D realistic Majuli mask world from Assam.

Preserve the source image's subject count, core action, major pose logic, and scene readability, but rebuild all visible forms through the devotional performance-mask grammar of the Majuli satra and Bhaona tradition. Replace normal face logic with wearable theatrical mask-face architecture designed for mythological role recognition and audience-distance clarity. Build the face through strong role-bearing structures such as enlarged eyes, expressive jaw, mouth design, crown, horn, fang, beak, snout, moustache, animal framing, or other appropriate extensions, while keeping the result rooted in Bhaona rather than in horror or generic fantasy.

Convert ordinary material logic into believable handmade Majuli mask construction memory: bamboo armature, layered clay-cow-dung-cloth shell, matte painted surface, handcrafted asymmetry, and lightweight performative build. The mask must feel like something that can be worn and performed, not like a heavy carved sculpture or glossy prop.

Extend the branch grammar beyond the face into the whole frame. Body, costume, props, background forms, stage-space, and environment must all belong to one Assamese devotional theatre world shaped by presentational hierarchy, mythological embodiment, and mask-led readability. The final result should feel like Majuli performance-mask intelligence became dimensional reality.

Do not paste a Majuli-like mask onto a realistic actor. Do not keep ordinary realism and add folk ornament later. Do not turn it into generic myth-fantasy concept art. Do not let the handmade shell logic disappear under polished realism. Rebuild the entire image so the world itself feels born from the Majuli mask system.
