

Neo-Agrarian Brutalism - Haryana

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic source-faithful visual logic of a **Haryana agrarian-production world fused with brutalist raw-concrete utility architecture**. Treat this as a **working plains landscape** where **intensively cultivated land, irrigation-backed field order, mechanized farm support, roads and storage systems, and heavy raw-concrete functional massing** already coexist inside one shared productive environment. Do not treat it as ordinary brutalist architecture with crops nearby, and do not treat it as a farm scene with concrete added later.

Build the whole frame as if the land itself is highly managed, productive, and infrastructure-linked. The agricultural side must feel worked, repeated, and machine-reachable. The brutalist side must feel like raw, heavy, exposed, utility-first concrete mass with strong geometric clarity, real storage or service logic, and serious functional presence. The two systems must belong to one world.

Transform more than texture. Change:

- the **base ground logic** so it feels like cultivated production land, not generic scenic terrain
- the **built mass logic** so concrete forms feel load-bearing, storage-oriented, retaining, enclosing, or processing-driven
- the **space construction** so field, road, yard, threshold, storage, and built mass organize depth through work rather than scenery
- the **shadow logic** so large masses cast structural shadows that clarify productive zones, field edges, loading spaces, corridors, and thresholds
- the **environment logic** so every visible field, road, machine, platform, storage zone, and atmospheric layer belongs to one severe but working Haryana land-and-mass system

If machinery appears, it must feel operational and embedded. If roads appear, they must function as throughput routes. If workers appear, they must belong to cultivation, handling, storage, loading, or processing. If buildings appear, they must feel like real raw-concrete agrarian-support or storage infrastructure, not decorative architectural objects.

Color and material must emerge from one shared system:

- crop and soil surfaces
- irrigation-darkened or production-managed ground
- raw concrete
- dust
- metal

- work-worn infrastructure
- shadow-heavy severe geometry

Do not generate:

- texture transfer
- palette transfer
- scenic agriculture
- generic brutalism
- rural-modern collage
- decorative concrete surfaces on farmland
- symbolic tractor-plus-bunker imagery

The final image must feel like a **Haryana productive plains world where cultivated land and brutalist concrete mass structurally co-author the full frame.**

Reusable Variable Template

Create **[SUBJECT / SCENE / LANDSCAPE TYPE]** in the authentic source-faithful visual logic of a **Haryana agrarian-production landscape fused with brutalist raw-concrete utility architecture.**

Core style system to preserve:

- intensively cultivated production land
- irrigation-backed order
- mechanized agrarian support
- raw concrete brutalist massing
- storage / containment / processing logic
- roads and throughput systems
- severe structural shadow
- one unified productive environment

Translate the frame like this:

- **[GROUND / FIELD SYSTEM]** becomes worked cultivated land with real production order
- **[BUILDINGS / MASSES / STRUCTURES]** become heavy exposed concrete forms with storage, service, retaining, processing, or containment logic
- **[ROADS / YARDS / CORRIDORS / LOADING EDGES]** become movement systems between productive zones
- **[MACHINES / VEHICLES / EQUIPMENT]** become operational support, not symbolic props
- **[PEOPLE / LABOR]** become tied to cultivation, handling, storage, or processing if present
- **[FULL ENVIRONMENT]** must feel like one Haryana land-and-mass production world

Mandatory transformation rule:

Do not transfer only surface cues.

Also transform:

- form
- silhouette
- shadow
- base
- space and depth
- object relations
- environment organization

Keep:

- coexistence, not contrast
- production stronger than scenery
- concrete stronger than façade styling
- cultivated land stronger than decorative greenery
- whole-frame integration

Avoid:

- scenic farm image
- generic bunker architecture
- ordinary industrial yard
- concrete texture pasted on buildings
- crop texture pasted on land
- split-world composition

Image-to-Image

Convert this source image into an authentic source-faithful **Neo-Agrarian Brutalist Haryana** world.

Preserve the source image's main subject count, general scene readability, and core action structure, but rebuild the entire frame through **intensively cultivated land, irrigation-backed field order, mechanized agrarian support, movement/storage logic, and heavy raw-concrete brutalist utility massing**. Replace generic terrain, generic roads, generic buildings, and generic industrial or rural cues with one fused productive plains system.

Rebuild the ground so it behaves like actively worked cultivation land. Rebuild buildings so they act like real concrete storage, retaining, service, processing, or agrarian-support masses. Rebuild roads and yards so they function as throughput and loading systems. Rebuild shadows so they clarify mass, corridors, work zones, and field edges. Rebuild the environment so land and concrete feel born from one grammar.

Do not merely add concrete texture or crop bands. Do not keep the original environment base underneath. Rebuild the whole frame so **form, shadow, base, mass, movement, and atmosphere all become one Haryana agrarian-brutalist production world.**

Stylescape Prompt

Create a **stylescape board** for a source-faithful **Neo-Agrarian Brutalism / Haryana** world.

The board should feel like a curated visual-system map, not a final scene. Include multiple coordinated panels showing the full grammar of the world:

- wide cultivated plains under strict production order
- raw exposed concrete storage and service masses
- field-to-platform and field-to-yard transitions
- roads, loading edges, and throughput corridors
- machinery-scaled thresholds
- deep structural shadows cast by heavy geometric forms
- raw concrete material closeups
- worked soil, crop banding, irrigation-marked land, dust, and storage surfaces
- one panel showing the relation between productive open land and hard concrete containment

The board must feel source-faithful, practical, severe, and non-decorative.

No eco-luxury styling, no scenic rural romanticism, no architecture-magazine prettiness, no symbolic collage. The stylescape must show how land, mass, storage, shadow, and movement belong to one Haryana production system.

Mood Board Prompt

Create a **mood board** for a source-faithful **Neo-Agrarian Brutalism / Haryana** world.

Focus on emotional and atmospheric identity rather than one final scene. The board should capture:

- hard working plains under agricultural discipline
- raw concrete severity
- dust, heat, and utilitarian stillness
- deep shadow against open productive ground
- storage, containment, and throughput as mood
- infrastructural seriousness
- labor-world tension
- non-romantic productivity

Use images or visual fragments that suggest:

- cultivated land as controlled system
- concrete as weight, not decoration
- roads and yards as working channels
- fields and structures sharing one harsh but honest environment

Avoid:

- soft pastoral mood
- eco-resort mood
- luxury brutalism
- generic industrial coolness
- decorative rural nostalgia

The mood board must feel like **productive land under severe concrete order**.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D translation** of a **Haryana agrarian-production world fused with brutalist raw-concrete utility massing**. This is not documentary realism, not surface styling, and not symbolic collage. It should build a new image-language where **cultivated plains, irrigation-backed land order, machines, storage, throughput, and brutalist concrete mass** rewrite the full visual system together.

Let the cultivated land become more compositionally active. Let field bands, ground divisions, irrigation order, harvest structures, and movement routes begin to shape the image more strongly. Let the brutalist side become more than buildings: let it become **retaining edges, storage masses, corridors, thresholds, platforms, bunker-like containment, and cast-concrete order**. The world should feel like land and mass are co-designing each other.

This version must transform more than surface. Change:

- **form** so fields and concrete masses belong to one hybrid structural language
- **silhouette** so the horizon, blocks, yards, edges, and field cuts all reflect the same severe production order
- **shadow** so hard geometric shadows actively reorganize work zones and spatial legibility
- **base-world structure** so the ground itself stops being generic countryside and becomes a disciplined production surface
- **space and depth** so open land and heavy mass interlock through corridors, storage edges, and machine-scale thresholds
- **environment logic** so sky, dust, ground, structures, machines, and circulation all share one fused identity

The world should become more formally authored and more visually decisive than V1, but it must remain source-rooted:

- land must still feel productive
- concrete must still feel raw and utilitarian
- roads and storage must still feel real
- the frame must still read as one Haryana world, not a fantasy of contrast

Do not generate:

- concrete texture transfer
- farm collage with harsh lighting
- architecture-concept art with crop motifs
- generic rural brutalism
- design-magazine atmosphere
- ordinary realism with local props

The final result must feel like **Haryana's agrarian production order and brutalist mass logic have together transformed form, shadow, base, space, and environment across the full frame.**

Reusable Variable Template

Create **[SUBJECT / SCENE / LANDSCAPE TYPE]** as a **creative 2D + 3D translation** of a **Neo-Agrarian Brutalist Haryana** world.

Preserve these style-core rules:

- cultivated land remains highly productive and ordered
- concrete mass remains raw, heavy, and utilitarian
- storage / containment / processing remain active
- roads and corridors remain structural
- agriculture and concrete co-author the frame
- the image must be rebuilt, not decorated

Translate the frame like this:

- **[FIELD / GROUND SYSTEM]** becomes a stronger productive land geometry
- **[CONCRETE MASSES / STRUCTURES]** become harsher, more decisive, more integrated with land logic
- **[ROADS / YARDS / THRESHOLDS / EDGES]** become stronger compositional connectors
- **[MACHINES / VEHICLES / EQUIPMENT]** become part of the same severe productive grammar
- **[WORKERS / LABOR / ACTIVITY]** become embedded in one working system if present
- **[FULL ENVIRONMENT]** must feel reauthored through one fused land-and-mass logic

Mandatory transformation rule:

Do not transfer only texture or material finish.

Also transform:

- form
- silhouette
- shadow
- base
- depth
- environment structure
- object hierarchy
- movement organization

Let these become richer:

- field geometry
- mass severity
- corridor rhythm
- shadow architecture
- productive depth
- storage / threshold presence

Keep unchanged:

- production stronger than mood
- concrete stronger than façade
- cultivated land stronger than scenery
- one unified Haryana world

Avoid:

- generic brutalist architecture
- decorative crops
- concept-art rural dystopia
- hero building with fields nearby
- split-world land versus concrete staging
- any texture-only solution

Image-to-Image

Convert this source image into a **creative 2D + 3D Neo-Agrarian Brutalist Haryana** world.

Preserve the source image's subject count, main layout, and core readability, but reconstruct the full frame through **worked cultivated plains, irrigation-backed land order, roads and throughput channels, storage and containment logic, and severe raw-concrete brutalist massing**. Let the image become more formally transformed and more spatially

disciplined than the original, but keep it fully rooted in the Haryana production-world grammar.

Rebuild the ground so it behaves like controlled productive land. Rebuild built forms so they act like retaining, storage, service, or processing masses. Rebuild roads and yard edges as movement infrastructure. Rebuild shadow so it organizes mass, land, and work zones. Rebuild the environment so all elements belong to one fused land-and-concrete system.

Do not just add bunker-like buildings or rough textures. Do not keep the original base-world. Rebuild the full image so **form, shadow, base, depth, thresholds, and atmosphere all shift into one Neo-Agrarian Brutalist Haryana environment.**

Stylescape Prompt

Create a **stylescape board** for a **creative 2D + 3D Neo-Agrarian Brutalist Haryana** world.

The board should show a reauthored hybrid visual system rather than literal reference photography. Include multiple coordinated panels showing:

- cultivated plains abstracted into strong productive geometry
- severe cast-concrete masses integrated into land order
- field edges becoming retaining or storage thresholds
- roads and corridors operating as compositional spines
- deep angular shadow carving working zones
- machinery and storage integrated into one harsh but coherent visual system
- closeups of raw concrete, dust, worked ground, crop bands, and machine-worn surfaces
- at least one panel where land and concrete become one fused silhouette language

The stylescape must feel like:

- productive
- severe
- infrastructural
- hybrid
- disciplined
- non-decorative
- fully transformed beyond texture transfer

Avoid:

- architecture-magazine luxury
- eco-rural prettiness
- symbolic factory-farm collage
- ordinary brutalism with local props

Mood Board Prompt

Create a **mood board** for a **creative 2D + 3D Neo-Agrarian Brutalist Haryana** world.

The board should capture the emotional and atmospheric identity of:

- worked land under control
- hard raw concrete weight
- severe shadow over productive ground
- storage, threshold, corridor, and containment tension
- harvest-world meeting bunker-like utility
- mechanized plains production
- disciplined harshness rather than romantic beauty

Use visual fragments that suggest:

- land as system
- concrete as authority
- roads as flow
- shadow as structural mood
- dust, soil, crop bands, and cast mass sharing one atmosphere

Avoid:

- scenic farming
- soft rural nostalgia
- elegant brutalist chic
- decorative industrial cool
- post-apocalyptic fantasy

The mood board must feel like **productive land compressed through severe utilitarian mass and shadow**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from a **Neo-Agrarian Brutalist Haryana** system. This is not generic realism with concrete and crops. It is a believable real world in which **intensively cultivated plains, irrigation-backed land order, mechanized agricultural support, roads and storage systems, and heavy raw-concrete brutalist massing** govern every visible element.

Translate the full style-system into reality. Every part of the frame must adapt:

- ground must behave like active productive agricultural land
- crop bands and field edges must behave like cultivated systems, not scenic textures
- concrete forms must behave like real heavy retaining, storage, processing, or support masses

- roads, corridors, yards, and thresholds must behave like real throughput and handling systems
- shadows must behave like structural consequences of hard utilitarian geometry
- machines, workers, storage, and environment must all belong to one harsh but functioning productive plains world

This version must not stop at realistic texture. It must rebuild:

- **form** so the built masses and the land belong to one fused grammar
- **base** so the environment itself becomes a Haryana production system under brutalist control
- **space** so fields, roads, platforms, yards, and masses interlock in believable operational depth
- **shadow and light** so hard geometry clarifies productive hierarchy
- **material behavior** so soil, crop, concrete, dust, metal, and machinery coexist under one functional logic
- **object relations** so nothing feels pasted in from another visual language

If people appear, they must belong to cultivation, loading, handling, maintenance, or processing. If no people appear, the world must still feel actively used and operational. The image should feel like a living production landscape, not a dramatic architectural scene.

Do not generate:

- generic photoreal farm scene
- generic photoreal brutalist architecture
- pretty concrete-and-crop realism
- design-magazine rural brutalism
- moodboard dystopia
- texture overlays on an unchanged world

The final image must feel like **a real Haryana production environment in which cultivated plains and brutalist raw-concrete mass have fused into one believable dimensional system.**

Reusable Variable Template

Create **[SUBJECT / SCENE / LANDSCAPE TYPE]** as a **full 3D realistic dimensional world** generated from a **Neo-Agrarian Brutalist Haryana** system.

Style system that must remain unchanged:

- cultivated land remains highly productive
- irrigation-backed order remains visible
- raw concrete mass remains heavy and utilitarian
- storage / containment / processing logic remains structural

- roads and movement remain connective systems
- shadow remains a structural carrier
- agriculture and concrete remain one integrated world
- the entire frame must be rebuilt through this grammar

Translate the frame like this:

- **[GROUND / FIELD WORLD]** becomes fully dimensional worked land with real productive order
- **[CONCRETE MASSES / STRUCTURES]** become materially real raw utility forms with true weight and use
- **[ROADS / YARDS / CORRIDORS / THRESHOLDS]** become spatially convincing throughput channels
- **[MACHINES / VEHICLES / EQUIPMENT]** become operational and system-linked
- **[PEOPLE / LABOR / ACTIVITY]** become tied to actual production if present
- **[FULL ENVIRONMENT]** becomes one coherent Haryana land-and-mass reality

Increase:

- material tactility
- mass weight
- productive depth
- shadow clarity
- threshold realism
- environment completion

Do not lose:

- cultivated-ground truth
- concrete structural truth
- system-level coexistence
- storage / movement logic
- harsh utilitarian seriousness
- whole-frame coherence

Avoid:

- generic realism with local props
- decorative crops
- façade-deep brutalism
- pretty land-and-concrete contrast
- surface-only transfer
- ordinary buildings under concrete texture

Image-to-Image

Convert this source image into a **full 3D realistic Neo-Agrarian Brutalist Haryana** world.

Preserve the source image's main subject count, layout, and readable action structure, but rebuild every visible element through **intensively cultivated productive land, roads and throughput systems, storage and containment logic, and heavy raw-concrete brutalist massing**. Replace generic terrain, generic buildings, decorative fields, and surface-only architecture with a full fused production-world system.

Rebuild the ground as active controlled agriculture. Rebuild buildings as real brutalist storage, retaining, processing, or support masses. Rebuild roads and yards as movement infrastructure. Rebuild shadows so they clarify severe geometry and working zones. Rebuild machines and labor so they feel embedded inside one operational world. Rebuild the atmosphere so dust, light, horizon, concrete, and field order all belong to the same reality.

Do not simply add realism to a land-plus-building collage. Do not keep the original base-world underneath. Rebuild the whole frame so **form, silhouette, shadow, base, environment, and object relations all become one believable Neo-Agrarian Brutalist Haryana system**.

Stylescape Prompt

Create a **stylescape board** for a **full 3D realistic Neo-Agrarian Brutalist Haryana** world.

The board should feel like a coherent reference system for a believable final world. Include multiple coordinated panels showing:

- wide productive plains with strong field order
- heavy cast-concrete retaining or storage masses
- platforms, ramps, roads, and yard systems
- crop bands and machine routes interacting with concrete edges
- severe recessed thresholds and deep shadow cuts
- machinery and loading zones integrated into the same world
- closeups of raw concrete, dust, crop residue, soil, metal, and weathered service surfaces
- at least one panel showing the full environmental relation between open cultivated land and hard utilitarian mass

The board must feel:

- real
- severe
- productive
- infrastructural
- weight-bearing
- shadow-governed
- fully integrated

Avoid:

- architecture branding imagery
- luxury brutalism
- pretty rural realism
- symbolic field-plus-building collage
- texture-sample boards without world logic

Mood Board Prompt

Create a **mood board** for a **full 3D realistic Neo-Agrarian Brutalist Haryana** world.

Focus on the emotional and atmospheric identity of:

- worked land under pressure
- hard concrete authority
- deep shadow across open productive ground
- containment, storage, and movement as mood
- severity without glamour
- heat, dust, labor, and throughput
- cultivated repetition meeting block mass and harsh thresholds

Use visual fragments that suggest:

- crop order under infrastructure
- concrete as weight and control
- roads and yards as lived channels
- shadow as a production-world mood
- plains openness compressed by severe utilitarian structure

Avoid:

- pastoral softness
- luxury design mood
- post-apocalyptic fantasy
- industrial cool detached from land
- purely architectural abstraction with no production truth

The mood board must feel like **a real working Haryana plains world under raw concrete discipline.**
