

Border-Sign - Manipur

V1 — Authentic Style

Universal Hard Prompt

Create an image built from the native visual logic of a **Manipuri border-sign field system**, where the governing force is the active relation between a **restrained body field** and an **identity-bearing border or edge event**. Do not treat this as generic border cloth, geometric trim, patterned sari edge, or decorative textile design. Build the entire image as if it comes from a cloth world where meaning lives through **field-versus-edge tension**, border authority, measured insertion, and controlled interval rhythm.

Use a visual system where figures are shaped by body-versus-edge hierarchy rather than realism-first anatomy. The body field must remain restrained and supportive. The border must remain structural and meaning-bearing. Shapes, props, animals, trees, architecture, horizon, and depth layers must all inherit the same threshold logic: edges matter, perimeters carry identity, and transitions must feel placed rather than decorative. The image must feel like a **border-sign world** generated the full scene.

No geometric print fabric, no decorative trim styling, no all-over motif spread, no realism-first scene with a border-coded garment.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** using the native visual logic of a **Manipuri border-sign field system**.

Core style system to preserve:

- body-versus-border hierarchy
- border as structural identity force
- restrained central field
- measured insertion and interval rhythm
- edge-led reading
- threshold logic
- whole-frame consistency so every visible element belongs to one border-sign world

Translate the scene like this:

- **[MAIN FIGURE]** becomes a presence organized by field-edge tension rather than decorative costume styling

- **[SECONDARY FIGURES]** also obey the same perimeter-aware structure
- **[OBJECTS / PROPS]** become sign-bearing threshold forms
- **[TREES / GROUND / ARCHITECTURE / HORIZON / ENVIRONMENT]** become elements structured by perimeter intelligence, bounded transitions, and field restraint
- **[ATMOSPHERE / DEPTH]** becomes controlled by threshold and edge emphasis rather than open realism

Keep:

- border authority
- restrained body field
- perimeter intelligence
- interval discipline
- threshold structure
- whole-frame edge logic

Avoid:

- decorative trim
- all-over geometry
- generic border fabric
- costume-only styling
- generic environment with one edge-coded garment

Image-to-Image

Convert this source image into the native visual world of a **Manipuri border-sign field system**.

Preserve the source image's subject count, action, and readable scene order, but rebuild the entire image through **field-edge tension**. Replace decorative edging with true border authority. Replace generic central space with restrained body-field support. Replace realism-first transitions with threshold logic and controlled interval rhythm. Rebuild figures, props, animals, ground, architecture, and environment so they all feel generated by a world where **perimeters carry identity**.

Do not only add a border to clothing or frame edges. Do not keep the environment generic. Do not turn it into geometric fabric art. Rebuild the whole scene as if border-sign logic invented it.

V2 — Artisan Translation

Universal Hard Prompt

Create a dimensional image-world rooted in the authentic logic of a **Manipuri border-sign field system**, where border authority, restrained body field, threshold logic, and measured insertion remain primary, but the scene gains richer spatial articulation and broader environmental use of edge intelligence. This must not become decorative geometry or generic realism. It must still feel generated by **field-edge hierarchy**.

Keep the branch source-rooted: the border must still be a structural force, not trim. The body field must still remain supportive, not empty or decorative. Figures must still be shaped by perimeter relation. Environment must become threshold-aware, with paths, horizons, props, and architecture behaving like extensions of edge logic. Let the image become richer and more dimensional, but keep it **border-led first**.

No geometric pattern fantasy, no ethnic trim styling, no realism-first world with symbolic edging, no all-over border spread.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** as an authentic dimensional translation rooted in a **Manipuri border-sign field system**.

Preserve these style-core rules:

- border authority remains primary
- body field remains restrained
- edge-to-field tension remains active
- measured insertion remains disciplined
- threshold logic remains visible
- whole-frame branch purity remains intact

Translate the image like this:

- **[MAIN FIGURE]** becomes a dimensional but still perimeter-governed presence
- **[SECONDARY FIGURES]** become supporting forms shaped by the same edge logic
- **[OBJECTS / PROPS / ANIMALS]** become threshold-aware sign-forms
- **[ENVIRONMENT]** becomes a broader but still border-led world organized through perimeters, boundaries, transitions, and interval rhythm
- **[DEPTH / SPATIAL STAGING]** becomes controlled by field-edge hierarchy rather than open realism

Let these become richer:

- threshold depth
- edge-led environment design
- figure-environment relation

- structured interval spacing
- broader world-scale perimeter intelligence

Keep unchanged:

- border as identity force
- restrained body field
- field-edge tension
- measured insertion
- whole-frame threshold logic

Avoid:

- decorative geometry
- trim styling
- all-over motifs
- realism with edge accents
- generic environment around one border-coded garment

Image-to-Image

Convert this source image into an authentic dimensional **Manipuri border-sign field translation**.

Preserve the source image's main action, staging, and readable hierarchy, but rebuild all visible elements through **perimeter intelligence and field-edge tension**. Figures must become edge-aware presences. Props and animals must become threshold signs. Ground, architecture, and distance must become a world of meaningful boundaries and restrained centers. The scene may become more dimensional, but it must still feel built by border-sign cloth logic rather than by realism with decorated edges.

Do not only put border motifs on garments or frame edges. Do not keep a generic environment. Do not let the branch flatten into geometric design. Rebuild the whole world as if it were generated by field-edge hierarchy.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a premium, fully orchestrated, depth-rich image-world generated from the authentic grammar of a **Manipuri border-sign field system**. The result must feel highly finished, highly readable, and spatially complete, but still fully governed by **border authority**,

restrained field support, threshold logic, interval rhythm, and edge-led identity.

Premium here must not become luxury décor or cinematic realism with decorative perimeters. It must remain border-led.

Use strong focal hierarchy, clear threshold staging, deliberate field-to-edge composition, and complete environmental control, but keep every zone inside the same border-sign system. Figures must remain perimeter-aware. Props and animals must become sign-bearing transitions. Architecture, landscape, and atmosphere must all feel structured by controlled boundaries and edge intelligence. The world must feel like a **premium final image built by a threshold cloth system**, not a realistic scene with stylish borders.

No luxury décor, no decorative ethnic trim, no cinematic realism with edge ornaments, no costume-only translation.

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** as a premium orchestrated cinematic translation of a **Manipuri border-sign field system**.

Style system that must remain unchanged:

- border as structural authority
- restrained body field
- threshold logic
- measured interval rhythm
- edge-led identity
- whole-frame branch ownership

Translate the scene like this:

- **[MAIN FIGURE]** becomes a premium, highly readable presence shaped by field-edge hierarchy
- **[SECONDARY FIGURES]** become supporting forms organized by the same threshold system
- **[OBJECTS / PROPS / ANIMALS]** become sign-bearing perimeter elements
- **[ENVIRONMENT / GROUND / ARCHITECTURE / SKY]** becomes a complete but still boundary-led world
- **[DEPTH / ATMOSPHERE]** becomes organized through transitions, thresholds, and controlled interval spacing

Increase:

- focal hierarchy
- threshold clarity
- full-frame cohesion
- environmental completion

- premium finish under branch control

Do not lose:

- border authority
- restrained field support
- threshold logic
- edge identity
- whole-frame perimeter ownership

Avoid:

- luxury trim styling
- decorative geometry
- realism with border accents
- generic center with styled edges
- any non-branch zone in the frame

Image-to-Image

Convert this source image into a premium cinematic **Manipuri border-sign field world**.

Preserve the source image's main action, subject relationships, and scene readability, but rebuild the entire frame through **field-edge tension and threshold intelligence**. Turn figures into boundary-aware presences. Turn objects and animals into sign-bearing edge forms. Turn architecture, terrain, and horizon into controlled perimeter structures. The result should feel premium and complete, but it must still feel born from border-sign cloth logic rather than from realism with decorative edging.

Do not only style the clothing edge. Do not leave the environment generic. Do not let premium finish turn the branch into décor. Rebuild the whole world as if perimeter logic invented it.
