

Channapatna - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create an object in the authentic source-faithful visual logic of **Channapatna craft from Karnataka**, treating it as a **lac-turned wooden toy and object tradition** centered in **lathe-shaped form, bright controlled lacquer color, glossy polished finish, and simplified playful clarity**. Do not treat it as generic painted toy craft, not as carved wooden figurine art, not as plastic toy design, and not as decorative woodwork with random bright colors.

Build the object as if it is born from a **turned wooden body**. The form must feel rotational, smooth, bead-like, cylindrical, domed, rounded, and clearly lathe-shaped. The object must feel simplified, safe, tactile, and easy to read. The surface must feel like **lacquer fused to the spinning wood**, not brush-painted on afterward.

Preserve the true Channapatna craft logic:

- seasoned wood shaped on a lathe
- smooth contour transitions
- simplified geometric and stylized form
- lacquer color applied through friction
- glossy polished finish
- bright but controlled color zones
- clear toy or small-object identity

The object world should come from:

- spinning tops
- stacking rings
- rattles
- dolls
- animal figurines
- puzzles
- small decor or utility objects
- child-safe, hand-friendly, workshop-crafted forms

The object must remain readable first as an object, not as a sculpture. Even figurative forms should still feel reduced into clean lathe-born masses. Use bright, cheerful, controlled color with a lacquer-like sheen, but do not let the object become noisy, over-detailed, painterly, or plastic-looking.

Whole-object rule: if the object includes body shape, color segments, lacquer surface, turning rhythm, and functional identity, all of them must belong to one **Channapatna**

grammar. The style must not stop at bright color. Shape, finish, polish, and material-process identity must all become Channapatna.

Do not generate:

- generic painted wooden toys
- carved folk figurines
- rough unfinished woodcraft
- plastic-like toy design
- sculptural realism
- random decorative object styling with no turning logic
- color transfer on generic forms

The final object must feel like **a true Channapatna piece: lathe-turned wood, friction-applied lacquer, glossy smooth finish, simplified geometry, bright controlled color, and playful but precise object clarity.**

Reusable Variable Template

Create **[OBJECT / TOY / FIGURINE / UTILITY ITEM]** in the authentic source-faithful visual logic of **Channapatna craft from Karnataka**, treating it as a **lac-turned wooden object system**.

Core style system to preserve:

- turned wooden body
- lacquered glossy skin
- simplified geometric and stylized form
- bright but controlled color
- polished tactile finish
- toy or utility-object clarity
- workshop-crafted precision
- Channapatna object identity rather than generic toy craft

Translate the object like this:

- **[BODY SHAPE]** becomes clearly lathe-born, smooth, rounded, and rotational
- **[MAIN OBJECT TYPE]** becomes simplified but functionally clear
- **[COLOR SYSTEM]** becomes lacquer-based, bright, clean, and controlled
- **[SURFACE]** becomes glossy, polished, and tactile
- **[DETAILS]** remain reduced and object-friendly, not overly realistic
- **[FULL OBJECT]** must read as one Channapatna system

Keep:

- turning first

- lacquer first
- simplification first
- object readability
- bright controlled color
- polished smoothness
- whole-object coherence

Avoid:

- carved-detail logic
- brush-painted woodcraft
- plastic-toy language
- rough rustic finish
- generic colorful object design
- realism-first figurative styling

Image-to-Image

Convert this source object or image into the authentic source-faithful visual logic of **Channapatna craft from Karnataka**.

Preserve the source object's main identity and broad readability, but rebuild the full object through **lathe-turned wooden form, friction-applied lacquer, bright controlled color, glossy polish, and simplified playful clarity**. Replace any generic toy styling, carved-wood behavior, brush-painted surface, or plastic-like finish with a true **Channapatna** object system.

If the source contains an animal, doll, toy, or utility object, simplify it into clear turned masses. If it contains color, rebuild that color as lacquered surface zones rather than painted illustration. If it contains texture, replace roughness with polished smoothness. If it contains object detail, reduce it into clean stylized form.

Do not simply add bright color to the source object. Do not keep another object language underneath. Rebuild the full piece so **form, lacquer, gloss, simplification, and object clarity all become one authentic Channapatna system**.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D translation** of **Channapatna craft from Karnataka**. This is not generic colorful toy styling, not lacquer texture transfer, and not simply putting bright bands on a wooden object. It should feel like the full **Channapatna grammar** has begun to reorganize the object more powerfully while still remaining unmistakably rooted in **lathe-born wooden form, friction-applied lacquer, glossy finish, and simplified playful clarity**. The source anchor remains the real craft process of **lathe turning, vegetable-color lac application, and polishing**.

Let the object stop behaving like standard toy design and start behaving like a **rotational lacquer object system**. Let the turned geometry become more compositionally forceful. Let color banding and lacquer skin become more structurally integrated. Let the object feel more fully authored by turning rhythm, color segmentation, gloss, and tactile simplification.

This version must transform more than surface. Change:

- the **form logic** so the object feels more clearly lathe-generated
- the **turning rhythm** so beads, curves, cylinders, and transitions become more structurally expressive
- the **color system** so lacquer bands and zones become more compositionally active
- the **surface logic** so gloss and polish feel integral, not decorative
- the **object identity** so toy or utility function remains clear inside stylization
- the **whole-object organization** so every zone belongs to one Channapatna system

Keep the source truth intact:

- turned wood remains primary
- lacquer remains fused to the surface
- simplification remains stronger than realism
- bright color remains controlled
- finish remains glossy and tactile
- the object remains clearly handcrafted and object-readable

Do not generate:

- generic colorful toy design
- lacquer look on carved sculpture
- decorative wood object with heritage colors only
- plastic-object realism
- rough handmade folk object
- texture transfer without structural turning logic

The final result must feel like **Channapatna craft grammar has reauthored the object through rotational form, lacquer skin, color rhythm, polish, and playful-but-precise object clarity**.

Reusable Variable Template

Create **[OBJECT / TOY / FIGURINE / UTILITY ITEM]** as a **creative 2D + 3D translation** of **Channapatna craft from Karnataka**.

Preserve these style-core rules:

- turned wooden body remains primary
- lacquered glossy skin remains active
- simplified geometry remains structural
- object clarity remains strong
- bright color remains controlled
- the full object must be rebuilt through Channapatna grammar

Translate the object like this:

- **[BODY FORM]** becomes a stronger lathe-generated structure
- **[CURVES / BEADS / CYLINDERS / DOMES]** become more compositionally expressive
- **[COLOR BANDS / SEGMENTS]** become more integrated into the form logic
- **[SURFACE / FINISH]** becomes more visibly lacquered and polished
- **[OBJECT FUNCTION / TYPE]** remains readable inside stylization
- **[FULL OBJECT]** must feel reauthored by Channapatna craft logic, not decorated afterward

Mandatory transformation rule:

Do not transfer only color, gloss, or toy vibe.

Also transform:

- turning rhythm
- form body
- color segmentation
- lacquer behavior
- polish logic
- object clarity
- whole-object coherence

Let these become richer:

- rotational geometry
- silhouette strength
- lacquer integration
- tactile polish
- object readability
- workshop-crafted precision

Keep unchanged:

- turning first
- lacquer first
- simplification first

- wood-based identity
- playful clarity
- whole-object coherence

Avoid:

- painted woodcraft logic
- sculptural carving logic
- plastic-toy language
- decorative random color
- realism-heavy form treatment
- generic colorful product styling

Image-to-Image

Convert this source object or image into a **creative 2D + 3D Channapatna craft world from Karnataka**.

Preserve the source object's main identity and broad readability, but rebuild the full object through **lathe-turned wooden body, friction-applied lacquer, bright controlled color, glossy polish, and simplified object clarity**. Let the object become more compositionally transformed than a literal craft reference while staying fully rooted in Channapatna grammar.

Rebuild the body so it behaves like a rotational object. Rebuild the silhouette so it becomes clean and stylized. Rebuild the color so it behaves like lacquered bands and zones. Rebuild the finish so it feels polished and tactile. Rebuild details so they support object clarity rather than realism.

Do not just apply Channapatna colors to the existing object. Do not keep another object language underneath. Rebuild the full piece so **form, turning rhythm, lacquer behavior, gloss, and simplified identity all become one Channapatna system**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from **Channapatna craft from Karnataka**. This is not a realistic wooden toy with bright paint added later. It is a believable object world in which **lathe-turned wooden form, friction-applied lacquer, glossy polished finish, bright controlled color, and simplified object clarity** govern every visible element. The real anchor remains the Channapatna process of **turned wood, colored lac, and polish**.

Translate the full style-system into reality. Every part of the object must adapt:

- the body must behave like a true turned wooden form
- the surface must behave like real lacquer, not ordinary paint
- the color must behave like controlled bright lacquer zones
- the finish must behave like smooth polished hand-crafted wood
- the silhouette must remain simplified and object-clear
- the object must still feel like a real Channapatna toy or crafted small object, not a generic product

This version must not stop at realistic texture. It must rebuild:

- **body logic** so the object remains genuinely lathe-born
- **surface logic** so lacquer remains materially believable
- **color logic** so bright zones remain clean and controlled
- **finish logic** so polish remains tactile and smooth
- **object logic** so toy or utility readability stays strong
- **whole-object coherence** so every zone belongs to one Channapatna system

If the object is a figurine, it must still remain simplified and rotational. If it is a utility item, it must still remain Channapatna in body, surface, and finish. The final result must still feel like Channapatna, not generic realistic wooden toy design.

Do not generate:

- realistic painted wooden toy
- carved wooden figurine realism
- plastic-like bright toy realism
- matte rustic woodcraft
- decorative color-object realism with no turning logic
- generic product realism with heritage color only

The final object must feel like **a real Channapatna craft world where turned wood, lacquer skin, glossy finish, simplified geometry, and playful object clarity have become materially and spatially believable reality.**

Reusable Variable Template

Create **[OBJECT / TOY / FIGURINE / UTILITY ITEM]** as a **full 3D realistic dimensional object** generated from **Channapatna craft from Karnataka.**

Style system that must remain unchanged:

- turned wooden body remains primary
- lacquered glossy skin remains active
- bright controlled color remains structured

- simplified object form remains strong
- smooth tactile finish remains visible
- the entire object must be rebuilt through one Channapatna grammar

Translate the object like this:

- **[BODY FORM]** becomes a believable turned wooden structure
- **[CURVATURE / BEAD / SPINDLE / CYLINDER LOGIC]** becomes physically convincing
- **[LACQUER / COLOR SKIN]** becomes materially real and fused to the object
- **[FINISH / POLISH]** becomes tactile, smooth, and glossy
- **[OBJECT FUNCTION / TYPE]** remains clearly readable
- **[FULL OBJECT]** becomes a coherent Channapatna reality rather than generic realism

Increase:

- wood tactility
- turning realism
- lacquer truth
- polish quality
- object clarity
- whole-object coherence

Do not lose:

- turning first
- lacquer first
- simplification first
- bright but controlled color
- handcrafted object identity
- whole-object unity

Avoid:

- realistic brush-painted toy
- carved figurine realism
- plastic toy language
- rustic unfinished wood
- generic colorful product design

Image-to-Image

Convert this source object or image into a **full 3D realistic Channapatna craft world from Karnataka**.

Preserve the source object's main identity and readable structure, but rebuild every visible element through **lathe-turned wooden form, friction-applied lacquer, bright controlled color, glossy polish, and simplified object clarity**. Replace generic toy styling, painted wood behavior, plastic-looking finish, or carved-object logic with a full Channapatna system.

Rebuild the body so it becomes the true turned wooden structure. Rebuild the silhouette so it remains simple and object-clear. Rebuild the surface so it behaves like lacquer, not paint. Rebuild the gloss so it feels polished and tactile. Rebuild the color so it remains bright but ordered. Rebuild the whole object so no zone remains generic.

Do not simply add realistic texture to a colorful toy. Do not keep the original object logic underneath. Rebuild the full piece so **body, turning rhythm, lacquer skin, color, finish, and object clarity all become one believable Channapatna reality**.
