

Himroo - Maharashtra

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual grammar of Himroo from Maharashtra, rooted in the historic handloom tradition of Aurangabad / Chhatrapati Sambhajinagar. Do not treat this as generic luxury fabric, generic brocade, generic jacquard, floral upholstery, velvet richness, embroidery-like ornament, or a normal world with Himroo texture added later.

Build the entire image as if it is generated by a woven Himroo world.

Core structural rules:

- the world must be governed by woven field logic, not scenic realism
- pattern must emerge from structure, not be pasted onto surfaces
- depth must feel generated by layered weave construction, not by embossing, gloss, or fake relief
- silk and cotton must interact visibly in the image logic, producing controlled softness, sheen, and structural richness
- the visual order must feel courtly, Deccani, restrained, and highly organized
- motifs such as jali, bel, gul, lily, lotus, creepers, mango, pomegranate, almond, geometric and flora-fauna forms must behave as woven field units, not as painted illustrations

Translate everything through Himroo logic:

- shape must become repeat-aware, weave-stable, field-generated, and structurally integrated
- form must become pattern-born rather than realism-born
- space must become textile field-space, layered and compressed rather than scenic perspective space
- light must reveal thread interaction, woven depth, and structural sheen, not glossy showroom highlights
- shadow must support embedded textile depth, not cinematic drama
- value must remain field-readable and pattern-supportive
- volume must remain textile-generated and structurally layered, not generic sculptural realism
- movement must feel like flow, drape, continuity, and woven order rather than action-based realism
- environment must become Himroo-born: trees, architecture, air, ground, empty intervals, objects, and figures must all obey one patterned woven intelligence

Material memory should remain visible:

silk-cotton weave, handloom planning, layered construction, structured richness, soft durable handle, and refined Deccani prestige.

Avoid:

generic brocade glamour, satin shine, printed floral cloth, decorative motif overlays, upholstery logic, realism-first scene construction, environment remaining generic while fabric changes, texture-only transformation.

The final result must feel like a true Himroo world: woven, layered, courtly, structurally deep, silk-cotton based, and generated by handloom field intelligence.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of authentic Himroo from Maharashtra.

Core style system to preserve:

- handloom woven field-world logic
- silk-cotton interaction as the main material intelligence
- layered structural depth rather than flat decorative surface
- pattern generated from woven order, not applied ornament
- Deccani courtly restraint and refined richness
- motifs behaving as field units within one woven system
- whole-world consistency so every visible element belongs to one Himroo logic

Translate the scene like this:

- [MAIN SUBJECT] becomes structured through Himroo field intelligence rather than generic realism
- [SECONDARY SUBJECTS] also obey the same woven order
- [OBJECTS / PROPS] become pattern-born and weave-integrated forms
- [ARCHITECTURE / LANDSCAPE / SKY / GROUND] become part of a Himroo field-world with layered textile depth
- [LIGHT / SHADOW] become controlled, structural, and thread-revealing
- [SPACE / DEPTH] become layered and compressed like woven textile space
- [MOVEMENT / ENERGY] become flow, continuity, and drape-like structure rather than cinematic action

Use motif intelligence such as:

jali, bel, gul, lilies, lotuses, creepers, mangoes, pomegranates, almonds, geometric and fauna-derived forms, only when they behave as woven structural units.

Keep:

woven identity, field order, layered depth, silk-cotton softness and sheen, courtly restraint.

Avoid:

generic brocade, upholstery styling, decorative floral patterning, print logic, material-only conversion, realism with Himroo cloth added afterward.

The final result must feel as if the whole world was invented by Himroo weaving logic.

Image-to-Image

Convert this source image into an authentic Himroo visual world from Maharashtra.

Preserve the source image's subject count, core action, main relationships, and readability, but rebuild the entire image through Himroo handloom logic. Do not simply add woven texture, floral motifs, or rich silk shine. Reconstruct shape, form, space, light, shadow, value, volume, environment, and hierarchy so the whole world behaves like a Himroo-woven field.

The converted image must become:

- structurally woven rather than decorated
- layered in depth through weave logic rather than scenic realism
- silk-cotton in material behavior rather than generic luxury cloth
- patterned through field order rather than motif overlays
- courtly and restrained rather than glamorous and excessive
- unified across figures, props, architecture, ground, sky, and intervals

All visible elements must belong to one Himroo system.

Do not let the environment remain generic.

Do not let motifs behave like stickers.

Do not let sheen become glossy or synthetic.

Do not let realism dominate the woven order.

The final result must feel like the source image has been rebuilt by Himroo, not merely covered with it.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D visual world rooted in the traditional Himroo grammar of Maharashtra. This must not become a decorative luxury textile fantasy, generic stylized brocade world, or a normal scene with Himroo patterning added later. It should feel like authentic Himroo weaving intelligence has expanded into a richer image-world while staying fully governed by handloom field logic.

Keep the deep structure unchanged:

- woven field order remains primary
- silk-cotton interaction still controls material behavior
- layered structural depth remains the source of dimensionality
- motifs remain field-born and loom-disciplined
- Deccani courtly restraint remains stronger than spectacle

- the environment must still be generated by Himroo logic

Now let the world become richer:

- hybrid flatness and depth can coexist more visibly
- forms can gain more woven pseudo-volume
- environment can become more articulated, but still field-generated
- architecture, trees, air, objects, and figures can become more integrated into patterned order
- light can become more expressive, but still reveal structure rather than glamour
- space can become more layered, but must not become generic scenic realism

Translate everything, not just the cloth:

shape, form, light, shadow, space, value, volume, movement, hierarchy, and environment must all be rebuilt through Himroo.

Avoid:

generic stylized luxury world, decorative Persianate fantasy, print-repeat logic, random floral richness, brocade confusion, realism-first composition, texture-only translation.

The final result must feel like Himroo itself has generated a richer woven universe.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in the traditional Himroo visual grammar of Maharashtra.

Preserve these style-core rules:

- woven field-world remains primary
- silk-cotton interaction remains visible
- layered structural depth remains central
- motifs stay loom-born and field-integrated
- the whole frame obeys one Himroo system
- courtly Deccani restraint remains intact

Translate the scene like this:

- [MAIN SUBJECT] becomes a woven-field presence rather than a realism-first figure or object
- [SECONDARY SUBJECTS] obey the same pattern-generated order
- [OBJECTS / PROPS] become structurally integrated field forms
- [ENVIRONMENT] becomes a richer but still Himroo-born layered world
- [LIGHT / SHADOW] become more articulated while remaining textile-governed
- [SPACE / DEPTH] become more layered without turning into scenic perspective
- [MOVEMENT / FLOW] become continuity, pattern drift, drape, and woven energy

Keep:

field intelligence, layered weave depth, silk-cotton softness and sheen, structural motif order, disciplined richness.

Avoid:

generic decorative fantasy, brocade-style spectacle, print logic, material-only swap, generic 2D pattern board, environment staying normal.

The final result must feel like the whole world has been redesigned by Himroo.

Image-to-Image

Convert this source image into a creative 2D + 3D Himroo world from Maharashtra.

Preserve the source image's subject count, main action, relationships, and readability, but reconstruct the full image through Himroo-woven logic. Do not stop at adding pattern, fabric richness, or soft sheen. Rebuild shape, form, light, shadow, space, value, volume, hierarchy, movement, and environment so the whole world behaves like an expanded Himroo field.

The transformed image must become:

- structurally woven, not decorated
- layered in textile-born dimensionality
- rich but restrained
- integrated across figures, props, architecture, trees, ground, and sky
- controlled by field order and motif logic
- visibly generated by silk-cotton loom intelligence

Avoid generic stylized luxury, decorative floral worlds, print-repeat fantasy, or ordinary scenic depth with Himroo added later.

The final result must feel like Himroo has expanded into a living image-world.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the traditional Himroo grammar of Maharashtra. This must not become normal realism with rich woven cloth added afterward. It must feel like the entire world has become real under Himroo law: woven field order, silk-cotton interaction, layered structural depth, and Deccani patterned restraint controlling everything.

Translate the full style into dimensional reality:

- shape must remain field-generated and weave-stable
- form must remain structure-born, not generic realism-born

- space must remain patterned and layered rather than ordinary perspective-led
- light must reveal thread interaction and structural depth
- shadow must support woven layering, not dominate like cinema
- value must remain field-readable
- volume must emerge from layered weave logic
- movement must remain textile-like flow, drape, and continuity
- environment must become a believable Himroo world
- figures, objects, architecture, trees, sky, ground, and empty intervals must all obey one woven system

Keep the memory of Himroo's double-layered construction and silk-cotton interplay visible even in realism. The world must feel materially convincing, spatially believable, and fully dimensional, but never generic.

Avoid:

generic luxury realism, fashion-shoot fabric glamour, brocade-style court scenes, printed pattern realism, environmental realism with Himroo garments only, texture-swap conversions, decorative floral richness replacing structure.

The final result must feel like Himroo weaving grammar itself became dimensional reality.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the traditional Himroo visual system of Maharashtra.

Style system that must remain unchanged:

- woven field-world logic
- silk-cotton interaction as primary material intelligence
- layered structural depth
- motifs integrated as woven field units
- Deccani courtly restraint
- full-world consistency under one Himroo order

Translate the scene like this:

- [MAIN SUBJECT] becomes a dimensional but Himroo-born presence
- [SECONDARY SUBJECTS] remain woven-field consistent
- [OBJECTS / PROPS] become structurally integrated textile-world forms
- [ARCHITECTURE / ENVIRONMENT / SKY / GROUND] become believable but still generated by Himroo pattern-space
- [LIGHT / SHADOW] become more real while remaining structure-revealing
- [SPACE / DEPTH] become dimensional without turning into generic scenic realism
- [MOVEMENT / PHYSICS] become believable but still textile-led in flow and continuity

Increase:

material conviction, spatial depth, object presence, light-material interaction, environmental completion.

Do not lose:

woven structural logic, layered depth, silk-cotton relation, field order, restrained richness.

Avoid:

generic realism, luxury fabric glamour, brocade confusion, print logic, decorative textile overlays, environment staying normal while cloth changes.

The final result must feel like a real Himroo world.

Image-to-Image

Convert this source image into a full 3D realistic Himroo world from Maharashtra.

Preserve the source image's subject count, core action, major relationships, and readability, but rebuild the entire image so that the world becomes real under Himroo's woven logic. Do not merely add textile richness or pattern overlays. Reconstruct shape, form, space, light, shadow, value, volume, environment, hierarchy, and movement so that everything feels generated by a layered silk-cotton field system.

The transformed image must become:

- structurally woven in visual logic
- dimensional through layered weave depth
- materially convincing through silk-cotton interaction
- unified across figure, object, architecture, trees, sky, and ground
- courtly and restrained rather than generically luxurious
- fully governed by Himroo instead of ordinary realism

Do not let realism take over.

Do not let the environment remain generic.

Do not let motifs become decorative decals.

Do not let sheen become synthetic glamour.

The final result must feel like Himroo itself has become reality.
