

Hmaram — Mizoram

V1 — Authentic Style

Universal Hard Prompt

Create an image in the **authentic source-faithful visual logic of Hmaram from Mizoram**. Treat this as an **old Mizo indigo-white woven motif-field skirt system**, not as generic Mizo textile styling, not as a tribal triangle print, not as decorative indigo fabric, and not as fashion surface design. Build the entire image as if it comes from a handwoven single-loom-width skirt tradition whose deepest identity is **old motif-field structure, indigo-and-natural-white woven contrast, named motif intelligence such as Kawkzialpui, Lenbuangthum, and Disul, controlled triangular placement, path-like interval behavior, and compact waist-wrap ceremonial body use**.

The image must feel **woven-first and field-first**. The pattern must not look added afterward. The motifs must feel born from the cloth-body. The triangular systems must not behave like generic geometry; they must feel plant-derived, old, counted, relational, and structurally placed. The indigo field must act as the carrying woven ground. White must emerge through motif and interval logic, not as random decoration.

If figures appear, they must not remain generic realistic people wearing a traditional skirt. Their silhouette, lower-body structure, clothing behavior, spacing, grouping, and visual rhythm must also be rebuilt through Hmaram logic. If animals, props, trees, architecture, ground, or background appear, they must also inherit the same motif-field intelligence so the whole frame feels generated from one Hmaram world.

The result must preserve:

- single-width woven restraint
- indigo-white structural contrast
- old motif-field identity
- flora-derived shape intelligence
- controlled triangle-to-triangle relation
- compact ceremonial skirt logic

Do not make this:

- generic Mizo patterned cloth
- indigo ethnic fashion textile
- triangle print on fabric
- decorative tribal geometry
- shawl or scarf behavior
- generic realism with one Hmaram garment added later
- a world where only the costume is style-translated

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** in the authentic source-faithful visual logic of an **old Mizo Hmaram woven motif-field skirt system from Mizoram**.

Use this style engine:

- single-loom-width handwoven skirt structure
- indigo-dyed and natural-white woven contrast
- old motif-field identity
- Kawkzialpui plant-derived motif memory
- Lenbuangthuam triangular path-like relation logic
- Disul opposing-triangle interval logic
- waist-wrap lower-body ceremonial use
- woven-not-printed pattern integration

Translate the whole image like this:

- **[MAIN FIGURE / MAIN FORM]** becomes a Hmaram-governed presence shaped by motif-field structure and waist-wrap cloth intelligence
- **[SECONDARY FIGURES / SECONDARY FORMS]** also obey the same indigo-white field order and triangular motif discipline
- **[OBJECTS / PROPS / ANIMALS]** become forms whose divisions, contours, and internal organization inherit Hmaram motif logic
- **[GROUND / TREES / ARCHITECTURE / BACKGROUND]** becomes a world organized by flora-derived triangular rhythm, path-like interval spacing, and woven field restraint

Keep:

- old patterned-skirt identity
- indigo-white woven authority
- motif placement discipline
- triangular relation logic
- path-like spacing
- compact lower-body cloth behavior

Avoid:

- generic triangle styling
- print-like pattern
- decorative indigo geometry
- shawl behavior
- fashion-first textile treatment
- one styled garment in an otherwise generic world

Image-to-Image

Convert this source image into the **authentic source-faithful visual logic of Hmaram from Mizoram**.

Preserve the source image's subject count, main action, pose relationships, and basic readability, but rebuild the entire image through **Hmaram motif-field law**: old woven pattern identity, indigo-and-white cloth hierarchy, Kawkzialpui / Lenbuangthuam / Disul logic, triangular placement discipline, path-like interval behavior, single-width cloth restraint, and waist-wrap ceremonial structure.

If the source contains people, do not simply place a Hmaram skirt on realistic figures. Rebuild their lower-body logic, silhouette, spacing, and grouping through Hmaram's woven field intelligence. If the source contains animals, objects, trees, ground, or architecture, rebuild them through the same motif-field system so the entire frame belongs to one Hmaram grammar.

Do not:

- apply pattern as surface decoration
- reduce the style to indigo-white triangles
- make the cloth behave like a shawl or scarf
- turn the result into graphic print design
- let the world remain generic while only the garment changes

V2 — Artisan Translation

Universal Hard Prompt

Create an image in a **creative 2D + 3D translation rooted in the source grammar of Hmaram from Mizoram**. This is not literal museum-faithful cloth study and not just "the same skirt with more texture." It must remain deeply rooted in Hmaram's source system: **old motif-field identity, indigo-and-white woven structure, Kawkzialpui / Lenbuangthuam / Disul intelligence, triangular relation behavior, path-like interval spacing, single-width skirt restraint, and waist-wrap ceremonial body logic**. Then translate that grammar into a richer image-world where the source pattern intelligence begins to control form, silhouette, spacing, props, animals, and environment.

The image should feel as if **Hmaram's internal motif logic has expanded into world logic**. Let the motif relations shape figures. Let triangle-path intelligence shape object divisions and environmental rhythm. Let indigo-white field contrast become full-frame

hierarchy. Let the old flora-derived pattern memory influence trees, animals, thresholds, ground, architectural divisions, and scene structure. Let the waist-wrap compactness become a wider rule of world-organization.

The result may become more dimensional, more image-capable, and more spatially articulate, but it must still feel **Hmaram-born**, not realism-born and not decorative-design-born.

Do not make this:

- generic folk geometric illustration
- decorative triangle world
- blue-white graphic styling
- print-pattern art with depth
- a dimensional scene where only the garment is Hmaram
- enlarged motif spectacle that loses woven intelligence

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** as a **creative 2D + 3D translation rooted in the source grammar of Hmaram from Mizoram**.

Preserve this style-core:

- old Mizo motif-field identity
- indigo-white woven hierarchy
- Kawkzialpui plant-derived motif memory
- Lenbuangthuam branching/path triangle logic
- Disul opposing-triangle field logic
- controlled motif placement
- single-width skirt-born restraint
- compact waist-wrap body intelligence

Translate the whole image like this:

- **[MAIN FIGURE / MAIN FORM]** becomes a hybrid 2D + 3D presence built from Hmaram motif-field order rather than generic anatomy-first realism
- **[SECONDARY FIGURES / FORMS]** obey the same triangular placement logic and indigo-white field hierarchy
- **[OBJECTS / PROPS / ANIMALS]** inherit flora-derived pattern intelligence and path-like interval structure
- **[GROUND / TREES / ARCHITECTURE / BACKGROUND]** becomes a richer world organized by Hmaram's motif placement, triangle relations, and woven field discipline

Let these become richer:

- motif-to-motif rhythm
- field-to-space translation
- triangle-path interval logic
- figure-environment ordering
- whole-frame indigo-white hierarchy
- dimensional but source-rooted image-body

Keep unchanged:

- Hmaram must still feel woven-born
- motif systems must still feel old and specific
- the world must still feel compact and disciplined
- nothing may drift into generic triangle design

Avoid:

- decorative blue-white folk art
- generic tribal geometry
- printed motif logic
- fashion-world styling
- one Hmaram garment in a generic scene
- ornamental richness replacing source grammar

Image-to-Image

Convert this source image into a **creative 2D + 3D translation rooted in the source grammar of Hmaram from Mizoram**.

Preserve the source image's subject count, action, pose relationships, and scene readability, but reconstruct all visible elements through **Hmaram motif-field intelligence**. The image must no longer behave like ordinary realism or generic handcrafted illustration. Rebuild it through old woven motif order, indigo-white hierarchy, Kawkzialpui / Lenbuangthuam / Disul logic, triangular relation behavior, flora-derived structural rhythm, and compact skirt-born restraint.

Let the image become more hybrid and more image-rich than a strict cloth study, but keep it clearly Hmaram-rooted. Figures must become more motif-governed. Props and animals must inherit path-like interval logic. Trees, ground, architecture, and background must stop being generic and become organized by Hmaram's old woven field grammar.

Do not:

- paste Hmaram motifs onto a normal image
- turn the style into generic indigo triangle illustration
- reduce it to surface pattern
- let the environment stay in another visual language

- keep Hmaram only on the garment

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world where the entire Hmaram style system becomes believable reality**. “Realistic” here does not mean replacing the style with generic realism. It means believable volume, material behavior, light, depth, gravity, and environmental completion while **Hmaram still controls the world**.

Build the image as if **Hmaram from Mizoram truly exists as world-law**. Translate its full grammar into reality:

- old Mizo motif-field identity
- single-loom-width structural restraint
- indigo-and-natural-white hierarchy
- Kawkzialpui fern-shoot-derived form intelligence
- Lenbuangthuam branching/path triangle logic
- Disul opposing-triangle field logic
- controlled motif placement
- compact waist-wrap ceremonial body behavior

Every major element must adapt to that system. Figures must feel shaped by motif-field relations rather than ordinary anatomy-first realism. Animals must feel born from Hmaram’s triangular and plant-derived structural logic. Props and architecture must feel organized by path-like interval behavior and motif-field divisions. Trees, ground, boundaries, and environmental spaces must feel generated from Hmaram’s woven pattern intelligence rather than from generic realism.

The realism must remain style-faithful. The motifs cannot become decorative trim. Indigo-white contrast cannot become just a color palette. Triangles cannot become generic ethnic graphics. The source must still be identifiable as an old Mizo woven motif-field skirt system that has grown into a believable world.

Do not make this:

- ordinary realism with Hmaram costume
- decorative tribal geometric fantasy
- blue-white patterned world design
- cinematic realism with only skirt accents
- generic environment around one styled garment
- realism that erases the old woven source

Reusable Variable Template

Create **[SUBJECT / SCENE / WORLD]** as a full 3D realistic dimensional world where the entire Hmaram style system becomes believable reality.

Treat the style as a **motif-field-generated indigo-white world** and preserve these non-negotiable rules:

- old motif-field identity still drives the frame
- single-loom-width restraint remains active in spirit
- Kawkzialpui / Lenbuangthuam / Disul logic still controls the world
- indigo-white hierarchy remains structural
- flora-derived triangular intelligence remains visible
- compact waist-wrap-born discipline still matters
- realism remains subordinate to Hmaram grammar
- the whole frame must belong to one Hmaram world

Translate the world like this:

- **[MAIN FIGURE / MAIN FORM]** becomes a believable volumetric presence governed by Hmaram motif-field logic
- **[SECONDARY FIGURES / FORMS]** become branch-pure dimensional presences under the same indigo-white and triangular order
- **[OBJECTS / PROPS / ANIMALS / THRESHOLDS]** become structurally bounded forms shaped by plant-derived motif intelligence and path-like interval logic
- **[GROUND / TREES / ARCHITECTURE / BACKGROUND / WORLD STRUCTURE]** becomes a full spatial system organized by Hmaram's motif placement, indigo-white hierarchy, and compact woven discipline

Increase:

- believable volume
- light-material interaction
- figure-ground separation
- environmental completion
- motif-field depth
- whole-frame realism under Hmaram control

Do not lose:

- old patterned-skirt source identity
- named motif logic
- indigo-white woven authority
- triangle-path structural behavior
- flora-derived intelligence
- whole-frame rebuild rule

Avoid:

- generic realism with patterned costume
- decorative triangle world-building
- print-surface logic
- modern graphic folk stylization
- any important element remaining generic
- realism becoming stronger than Hmaram

Image-to-Image

Convert this source image into a **full 3D realistic dimensional world where the entire Hmaram style system becomes believable reality**.

Preserve the source image's subject count, major action, pose logic, and core readability, but rebuild the whole frame through **Hmaram world-law**. Replace ordinary realism or generic stylization with old woven motif-field order, indigo-white hierarchy, Kawkzialpui / Lenbuangthuam / Disul logic, triangular relation behavior, flora-derived structural rhythm, compact skirt-born discipline, and path-like interval order.

If the source contains figures, they must become believable volumetric presences shaped by Hmaram's motif-field intelligence rather than ordinary costume realism. If the source contains animals, props, trees, architecture, or environment, they must also be reconstructed through the same plant-derived triangular grammar so the whole world feels built from Hmaram. The realism must remain subordinate to the style, not the other way around.

Do not:

- simply add a Hmaram skirt to a realistic image
- reduce the style to indigo-white triangular patterning
- erase motif-field logic into realism
- make only the garment Hmaram while the rest stays generic
- let one important element belong to another visual language
