

Hoysala Relief - Karnataka

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic source-faithful visual logic of **Hoysala temple relief from Karnataka**, treating it as a **stellate soapstone temple-sculpture system** where **architecture, frieze, narrative carving, deity niches, and sculptural bands are one integrated body**. Do not treat it as generic South Indian stone carving, not as a plain temple wall with decorative panels, and not as a random collection of ornate sculptures.

Build the image from the real Hoysala structural logic:

- a **stellate or rhythmically articulated temple body**
- a **circumambulatory platform or processional reading zone**
- **multi-tiered frieze bands**
- dense and continuous **soapstone relief carving**
- sculptural fields integrated into the full architectural surface
- epic and sacred narrative imagery embedded into the temple body

The architecture must not feel flat. The wall must project and recede. The exterior must feel carved into a living sculptural system. The friezes must feel layered, ordered, and sequential. The relief must feel like it belongs to a temple meant to be read while moving around it, not just looked at frontally.

Use true Hoysala material and sculptural behavior:

- finely carved **soapstone**
- high precision in detail
- dense but ordered ornament
- deity niches and figural galleries integrated into the wall
- base friezes, narrative bands, and upper sculptural layers functioning together
- sacred and epic subjects such as divine figures, symbolic motifs, and narrative panels from temple story worlds

The carving must feel architectural, not just decorative. Figures must feel sculptural and alive, but still part of a larger gallery system. The temple body must remain more important than any one isolated statue.

Whole-frame rule: if the image includes platform, walls, projections, recesses, frieze bands, figure niches, epic scenes, symbolic bands, or ornamental layers, all of them must belong to one **Hoysala architecture-relief grammar**. The style must not stop at surface ornament. Temple body, carving order, spatial reading, and sculptural continuity must all become Hoysala.

Do not generate:

- generic temple stone carving
- flat walls with carved inserts
- random ornament density
- statue-centered composition with weak architecture
- rough generalized stone carving
- decorative Indian temple fantasy with no frieze order
- any form of texture transfer without structural transformation

The final image must feel like **a true Hoysala temple-relief world: stellate architecture, circumambulatory reading, multi-tiered friezes, dense soapstone carving, and sacred-epic sculptural continuity across the full exterior body.**

Reusable Variable Template

Create **[SUBJECT / TEMPLE ZONE / ARCHITECTURAL SCENE]** in the authentic source-faithful visual logic of **Hoysala relief from Karnataka**, treating it as a **stellate temple-sculpture system carved in soapstone.**

Core style system to preserve:

- stellate architectural body
- circumambulatory reading logic
- multi-tier frieze structure
- dense full-surface relief carving
- soapstone precision
- sacred and epic sculptural gallery logic
- architecture and relief acting as one system

Translate the image like this:

- **[TEMPLE BODY / WALL SURFACE]** becomes a true Hoysala articulated stone architecture
- **[FRIEZE SYSTEM]** becomes layered, ordered, and processional
- **[FIGURE NICHES / NARRATIVE PANELS / DEITIES]** become integrated sculptural fields
- **[STONE MATERIAL]** becomes fine, precise, detail-friendly soapstone carving
- **[ORNAMENT / SYMBOLIC BANDS / LOWER REGISTERS]** become structurally part of the temple body
- **[FULL FRAME]** must read as one Hoysala architecture-relief system

Keep:

- architecture first
- frieze order first
- sculptural continuity
- processional reading

- full-surface activation
- sacred-epic narrative field
- whole-structure coherence

Avoid:

- generic carved temple wall
- flat façade
- isolated sculpture display
- random decorative density
- rough stone texture with no Hoysala precision
- ornamental transfer onto generic architecture

Image-to-Image

Convert this source image into the authentic source-faithful visual logic of **Hoysala relief from Karnataka**.

Preserve the source image's main architectural massing, subject count, and broad readability, but rebuild the full image through **stellate temple-body logic, circumambulatory platform rhythm, multi-tier frieze organization, dense soapstone carving, and sacred-epic sculptural gallery structure**. Replace any generic stone architecture, plain wall zones, decorative carving, or isolated figurative sculpture with a true Hoysala temple-relief system.

If the source image contains a temple wall, rebuild it as an articulated Hoysala exterior surface. If it contains sculptural bands, rebuild them into a proper multi-tier frieze order. If it contains figures, rebuild them as part of a temple gallery rather than standalone statues. If it contains decorative carving, restructure it into Hoysala architectural-sculptural sequencing. If it contains flat zones, activate them through proper relief logic without losing structural order.

Do not simply add Hoysala carvings to the existing image. Do not keep another architectural language underneath. Rebuild the full structure so **body, friezes, carvings, figure niches, narrative rhythm, and stone behavior all become one authentic Hoysala system**.

V2 — Artisan Translation

Universal Hard Prompt

Create a **creative 2D + 3D translation** of **Hoysala relief from Karnataka**. This is not generic temple ornament transfer, not stone texture transfer, and not simply adding carved

bands to a temple wall. It should feel like the full **Hoysala architecture-relief grammar** has begun to reorganize the image more powerfully while still remaining unmistakably Hoysala.

Let the temple body stop behaving like standard architecture and start behaving like a **stellate sculptural organism**. Let the projecting and receding wall rhythm become more compositionally active. Let the frieze bands become more structurally legible. Let the sculptural galleries flow more clearly through the architecture. Let the whole image feel authored by **movement, sequencing, carving density, and architectural rhythm** rather than by ornament alone.

This version must transform more than surface. Change:

- the **temple-body logic** so the architecture itself becomes more sculpturally generated
- the **projection/recession rhythm** so the stellate form becomes compositionally forceful
- the **frieze system** so stacked bands become more structurally readable
- the **gallery logic** so figures and narratives read as continuous temple sculpture, not isolated inserts
- the **stone behavior** so precision, density, and carving hierarchy feel intentional
- the **whole-architecture organization** so every zone belongs to one Hoysala system

Keep the source truth intact:

- architecture and relief remain one body
- the temple must still feel processional
- the frieze system must remain ordered
- the sculptural world must remain sacred and epic
- the stone must still feel like fine-carved soapstone
- the whole image must remain specifically Hoysala, not generic temple richness

Do not generate:

- random ornate carving
- decorative pattern transfer
- generic “intricate temple” fantasy
- isolated hero sculpture on weak architecture
- flat façade with dense detail
- texture-only transformation

The final result must feel like **Hoysala temple grammar** has reauthored the image through **stellate body rhythm, frieze sequencing, sculptural galleries, soapstone precision, and processional architectural reading**.

Reusable Variable Template

Create **[SUBJECT / TEMPLE ZONE / ARCHITECTURAL SCENE]** as a **creative 2D + 3D translation of Hoysala relief from Karnataka.**

Preserve these style-core rules:

- architecture-relief unity remains primary
- stellate body rhythm remains active
- circumambulatory reading remains legible
- multi-tier frieze structure remains structural
- sculptural gallery logic remains continuous
- stone precision remains fine and dense
- the image must be rebuilt through Hoysala grammar, not decorated afterward

Translate the image like this:

- **[TEMPLE BODY / SURFACE]** becomes a stronger articulated Hoysala structure
- **[PROJECTIONS / RECESSES / CORNERS]** become more compositionally forceful
- **[FRIEZE SYSTEM]** becomes more readable and architecturally ordered
- **[FIGURE FIELDS / NICHES / NARRATIVE PANELS]** become more integrated into one gallery system
- **[STONE MATERIAL / CARVING SURFACE]** becomes richer yet still precise and structured
- **[FULL FRAME]** must feel reauthored by Hoysala architectural-relief logic

Mandatory transformation rule:

Do not transfer only carving texture or motif.

Also transform:

- architectural body
- star rhythm
- processional reading
- frieze sequencing
- sculptural hierarchy
- surface saturation logic
- whole-structure coherence

Let these become richer:

- projection/recession dynamics
- frieze rhythm
- gallery continuity
- sculptural density
- sacred-epic field readability
- architectural integration

Keep unchanged:

- Hoysala not generic temple carving
- architecture first

- ordered density
- soapstone precision
- whole-frame coherence

Avoid:

- texture transfer
- ornament wallpapering
- statue-first composition
- flat temple body
- decorative chaos
- random carved richness

Image-to-Image

Convert this source image into a **creative 2D + 3D Hoysala temple-relief world from Karnataka**.

Preserve the source image's main architectural massing, subject count, and broad readability, but rebuild the full frame through **stellate temple-body articulation, circumambulatory platform logic, multi-tier frieze sequencing, dense soapstone carving, and sacred-epic sculptural gallery organization**. Let the image become more compositionally transformed than a literal Hoysala reference while staying fully rooted in Hoysala grammar.

Rebuild the body so it behaves like a processional sculptural structure. Rebuild the wall rhythm so projections and recesses actively shape the image. Rebuild friezes so they become ordered stacked fields. Rebuild figures so they join a continuous gallery rather than standing alone. Rebuild the stone so it feels fine-carved, dense, and architectural rather than merely decorative.

Do not just apply Hoysala ornament to the existing image. Do not keep another temple language underneath. Rebuild the full structure so **body, friezes, figure fields, narrative order, stone precision, and architectural movement all become one Hoysala system**.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a **full 3D realistic dimensional world** generated from **Hoysala relief from Karnataka**. This is not a realistic temple with Hoysala ornament added later. It is a believable world in which **stellate temple geometry, circumambulatory platform logic,**

multi-tier frieze order, dense soapstone carving, and sacred-epic sculptural galleries govern every visible element.

Translate the full style-system into reality. Every part of the frame must adapt:

- the temple body must behave like a true Hoysala articulated structure
- the platform must behave like a real circumambulatory reading path
- the friezes must behave like real stacked narrative and symbolic bands
- the sculptural niches and panels must behave like a continuous carved gallery
- the stone must behave like finely worked soapstone, capable of precision
- the whole exterior must feel architecturally saturated with carving, not decorated afterward

This version must not stop at realistic texture. It must rebuild:

- **architectural body logic** so the temple remains truly stellate and rhythmically articulated
- **movement logic** so circumambulatory reading remains active
- **frieze structure** so band order governs the wall
- **sculptural-gallery logic** so figures remain part of one exterior field
- **stone behavior** so carving precision remains believable
- **whole-architecture coherence** so everything belongs to one Hoysala system

If the image contains deity niches, epic scenes, animal bands, symbolic friezes, or sculptural projections, they must all remain integrated into one temple body. The final result must still feel like Hoysala architecture-relief, not generic realistic temple carving.

Do not generate:

- generic realistic temple architecture
- carved temple with plain body underneath
- random stone ornament
- decorative sculptural fantasy
- statue-focused realism
- texture realism without Hoysala structure

The final image must feel like **a real Hoysala temple-relief world where stellate architecture, processional reading, frieze order, and fine soapstone carving have become materially and spatially believable reality.**

Reusable Variable Template

Create **[SUBJECT / TEMPLE ZONE / ARCHITECTURAL SCENE]** as a **full 3D realistic dimensional world** generated from **Hoysala relief from Karnataka**.

Style system that must remain unchanged:

- stellate architecture remains primary
- circumambulatory reading remains active
- multi-tier frieze structure remains ordered
- sculptural gallery remains continuous
- soapstone precision remains fine and believable
- full-surface carving remains structural
- the entire frame must be rebuilt through one Hoysala architecture-relief grammar

Translate the image like this:

- **[TEMPLE BODY / WALL SYSTEM]** becomes a believable articulated Hoysala structure
- **[PLATFORM / PROCESSIONAL ZONE]** becomes a real circumambulatory reading space
- **[FRIEZE STACKS / BANDS]** become materially real and hierarchically ordered
- **[SCULPTURAL FIELDS / NICHEs / PANELS]** become a continuous carved gallery
- **[STONE MATERIAL / DETAIL SURFACE]** becomes physically convincing soapstone precision
- **[FULL ARCHITECTURAL WORLD]** becomes a coherent Hoysala relief environment rather than generic realism

Increase:

- body articulation
- processional spatial reading
- frieze clarity
- carving precision
- gallery continuity
- full-structure coherence

Do not lose:

- Hoysala not generic temple carving
- architecture first
- ordered density
- soapstone detail
- sacred-epic field
- whole-frame coherence

Avoid:

- realistic plain temple with ornament overlay
- generic Indian temple realism
- heavy statue emphasis
- decorative surface density without structure
- texture-only realism

Image-to-Image

Convert this source image into a **full 3D realistic Hoysala temple-relief world from Karnataka**.

Preserve the source image's main architectural arrangement, subject count, and readable massing, but rebuild every visible element through **stellate temple-body logic, circumambulatory platform structure, multi-tier frieze sequencing, dense soapstone carving, and sacred-epic sculptural gallery integration**. Replace generic temple walls, plain architecture, decorative carving, or generic stone realism with a full Hoysala architecture-relief system.

Rebuild the body so it becomes genuinely articulated and star-rhythmic. Rebuild the platform so it supports movement and reading. Rebuild friezes so they become real stacked narrative and symbolic bands. Rebuild figure zones so they act as a gallery rather than isolated sculpture. Rebuild the stone so it feels fine-carved and precise. Rebuild the whole architecture so no zone remains generic.

Do not simply add realistic texture to ornate carvings. Do not keep the original architecture underneath. Rebuild the full structure so **body, platform, friezes, figures, narrative order, stone precision, and sculptural saturation all become one believable Hoysala reality**.
