

Jaintia textile - Meghalaya

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual grammar of traditional Jaintia textile from Meghalaya. Do not treat this as generic shawl fabric, generic striped handloom, generic checkered tribal cloth, or a normal world with regional textile cues added later. Build the entire image as if it is generated by a Jaintia field-and-shawl cloth world where Thoh Khyrwang-like woven identity, checked and striped field order, zoned body placement, and Eri / Ryndia handloom intelligence control every decision.

The image must obey Jaintia textile rules:

- the world is built from shawl-and-zoned-cloth logic, not general draped-fashion logic
- woven fields such as checks and stripes remain structural, not decorative
- cloth zones have different roles on the body
- shawl identity and field identity remain visible
- the cloth reads as woven, placed, and body-zoned rather than as one generic fabric surface
- the world feels handloom-born, field-organized, and regionally specific rather than generalized

Translate the full world through this branch:

- shape must become field-based, stripe-based, check-based, and cloth-zoned
- form must become woven-field form rather than generic wrap form
- space must become zoned body-cloth space rather than scenic perspective space
- light must reveal field contrast, shawl texture, stripe/check rhythm, and woven order
- shadow must support fold, field distinction, and cloth zoning rather than cinematic mood
- value must remain clean enough to preserve stripe/check structure and body-zone readability
- volume must behave as cloth volume: shawl fall, tied cloth tension, wrapped field behavior
- movement must feel like shawl drift, check/stripe field motion, and body-zoned cloth pull
- environment must also obey field-and-zone order: space, supports, intervals, ground, and surrounding forms must feel sectioned, striped, checked, or shawl-organized in logic rather than generic realism

Use Jaintia textile anchors such as:

Thoh Khyrwang-like shawl identity, field-based checks and stripes, Eri / Ryndia handloom character, and differentiated cloth placement on the body.

Avoid:

generic striped handloom, generic shawl styling, generic Eri cloth mood, decorative check patterning, normal environment with one Jaintia textile item added, surface-only textile translation.

The final result must feel like a true Jaintia textile world: field-organized, shawl-rooted, body-zoned, handloom-born, and fully translated in shape, form, space, light, hierarchy, and environment.

Reusable Variable Template

Create [SUBJECT / SCENE] using the full visual grammar of traditional Jaintia textile from Meghalaya.

Core style system to preserve:

- shawl-and-zoned-cloth logic
- field identity through checks and stripes
- differentiated body placement
- Thoh Khyrwang-like woven field dignity
- Eri / Ryndia handloom character under structural control
- whole-frame consistency under one Jaintia cloth system

Translate the scene like this:

- [MAIN SUBJECT] becomes structured through checked / striped shawl-field logic rather than generic realism
- [SECONDARY SUBJECTS] obey the same field-and-zone textile order
- [OBJECTS / PROPS] become field-organized, sectioned, striped, checked, or woven-zoned in logic
- [ENVIRONMENT / BACKGROUND] becomes organized by cloth fields, body-zone distinctions, and shawl-like woven order
- [LIGHT / SHADOW] become field-revealing rather than scenic
- [SPACE / DEPTH] become zoned and woven rather than generic perspective
- [MOVEMENT / ACTION] become shawl drift, field shift, wrap pull, and cloth-zone continuity rather than generic motion

Keep:

Jaintia recognizability, Thoh Khyrwang-like field identity, check/stripe logic, shawl dignity, body-zone differentiation, handloom character.

Avoid:

generic shawl styling, decorative stripes, pattern-only translation, generic Meghalaya textile mood, only one cloth item translated while the world stays generic.

The final result must feel like the whole world was generated by Jaintia textile logic.

Image-to-Image

Convert this source image into an authentic Jaintia textile world from Meghalaya.

Preserve the source image's subject count, core action, main relationships, and readability, but rebuild the full image through Jaintia field-and-shawl cloth logic. Do not simply add stripes, checks, or handloom texture. Reconstruct the image so that shape, form, space, light, shadow, value, movement, hierarchy, and environment all obey zoned woven field order and shawl-based body placement.

The transformed image must become:

- field-structured rather than fabric-decorated
- shawl-rooted rather than generic wrap-based
- body-zoned rather than costume-styled
- woven and regionally specific rather than generalized
- unified across cloth, subject, supporting forms, intervals, and environment

Do not let only one shawl or garment become Jaintia while the rest of the image stays ordinary.

Do not let checks or stripes behave like print design.

Do not let realism override woven field structure.

The final result must feel like the source image has been rebuilt by Jaintia textile logic, not decorated with it.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D visual world rooted in the traditional Jaintia textile grammar of Meghalaya. This must not become generic shawl fantasy, decorative stripe illustration, or a normal scene with handloom cloth added later. It should feel like authentic Jaintia field-and-shawl logic has expanded into a richer stylized world while remaining fully controlled by woven field identity, checked/striped organization, body-zone differentiation, and handloom cloth dignity.

Keep the deep structure unchanged:

- field-and-shawl logic remains primary
- checks and stripes remain structural rather than decorative
- body-zone placement remains visible
- Thoh Khyrwang-like shawl identity remains active
- Eri / Ryndia handloom character remains under field control
- environment must still feel zoned and woven rather than scenic

Now let the world become richer:

- checked and striped fields can organize larger compositions
- shawl logic can spread into broader spatial ordering
- body-zones can shape figure grouping and environmental divisions

- woven fields can become more visibly layered in 2D + 3D
- light can become more expressive while still preserving field readability
- environment can deepen without abandoning sectioned cloth-space logic

Translate everything:

shape, form, space, light, shadow, value, movement, hierarchy, and environment must all be rebuilt through Jaintia textile logic.

Avoid:

generic striped textile fantasy, shawl styling mood, decorative handloom worlds, pattern-only translation, scenic worlds with one Jaintia cloth accent, costume-only conversion.

The final result must feel like Jaintia textile itself has generated a richer stylized universe.

Reusable Variable Template

Create [SUBJECT / SCENE] as a creative 2D + 3D translation rooted in traditional Jaintia textile from Meghalaya.

Preserve these style-core rules:

- field-and-shawl cloth logic remains primary
- checks and stripes remain woven structure
- body-zone differentiation remains active
- Thoh Khyrwang-like shawl identity remains visible
- Eri / Ryndia handloom character stays under field control
- the environment remains zoned and textile-generated
- the whole frame obeys one Jaintia cloth system

Translate the scene like this:

- [MAIN SUBJECT] becomes structured by woven field-and-shawl logic rather than generic realism
- [SECONDARY SUBJECTS] obey the same zoned cloth order
- [OBJECTS / PROPS] become sectioned, fielded, checked, striped, or shawl-related in logic
- [ENVIRONMENT] becomes a richer but still field-organized world built through zoned cloth intelligence
- [LIGHT / SHADOW] become more expressive while staying field-revealing
- [SPACE / DEPTH] become more layered without turning into generic scenic realism
- [MOVEMENT / ACTION] become shawl drift, field pull, striped/check movement, and body-zone cloth continuity rather than generic motion

Keep:

Jaintia recognizability, field identity, shawl dignity, check/stripe structural order, body-zone readability.

Avoid:

generic shawl fantasy, decorative stripes, generic handloom worlds, only the garments translated, environment remaining ordinary.

The final result must feel like the world was redesigned by Jaintia textile.

Image-to-Image

Convert this source image into a creative 2D + 3D Jaintia textile world from Meghalaya.

Preserve the source image's main action, relationships, and readability, but reconstruct the full image through Jaintia field-and-shawl logic. Do not stop at adding stripes, checks, or handloom texture. Rebuild shape, form, space, light, shadow, value, movement, hierarchy, and environment so the whole image behaves like an expanded Jaintia woven field-world.

The transformed image must become:

- field-structured rather than surface-decorated
- shawl-rooted rather than generic wrap-styled
- body-zoned rather than costume-led
- woven and regionally specific rather than generalized
- richer in sectioned cloth logic and field orchestration
- unified across subject, cloth, intervals, props, and environment

Do not allow only one textile element to become Jaintia.

Do not let the environment remain generic.

Do not let checks and stripes replace structure.

The final result must feel like Jaintia textile has expanded into a living stylized world.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D dimensional world generated from the traditional Jaintia textile grammar of Meghalaya. This must not become ordinary realism with a checked or striped shawl added later. It must feel like the entire world has become real under Jaintia cloth law: Thoh Khyrwang-like field identity, shawl-rooted structure, checked/striped woven order, body-zone differentiation, and Eri / Ryndia handloom character controlling everything.

Translate the full branch into dimensional reality:

- shape must remain field-led, shawl-rooted, and body-zoned
- form must remain woven-field form rather than generic draped fashion form
- space must remain sectioned and cloth-organized rather than scenic realism
- light must reveal field contrast, shawl texture, woven depth, and zone distinction
- shadow must support field readability, fold, and cloth separation

- value must remain clean enough to preserve check/stripe structure and body-zone clarity
- volume must behave as cloth volume: shawl fall, tied tension, layered field behavior
- movement must feel like believable shawl drift, field shift, and body-zoned cloth motion
- environment must inherit woven field logic: sectioned space, zoned forms, checked/striped order, and shawl-organized rhythm rather than generic realism

Keep realism under cloth control:

believable Eri / Ryndia material presence, real shawl weight, convincing field contrast, and body-zone cloth behavior without drifting into generic shawl realism or handloom fashion styling.

Avoid:

generic realistic shawls, striped fashion wraps, scenic realism with one Jaintia textile accent, printed-looking checks, surface-only handloom texture, only the garment translated.

The final result must feel like Jaintia textile itself became dimensional reality.

Reusable Variable Template

Create [SUBJECT / SCENE] as a full 3D realistic dimensional world generated from the traditional Jaintia textile system of Meghalaya.

Style system that must remain unchanged:

- field-and-shawl cloth logic
- Thoh Khyrwang-like woven field dignity
- checks and stripes as structural order
- body-zone differentiation
- Eri / Ryndia handloom character under field control
- full-world consistency under Jaintia cloth law

Translate the scene like this:

- [MAIN SUBJECT] becomes a dimensional but still field-led Jaintia presence
- [SECONDARY SUBJECTS] obey the same body-zoned woven order
- [OBJECTS / PROPS] become sectioned, fielded, checked, striped, or shawl-related in structural logic
- [ENVIRONMENT] becomes a believable world organized by woven field order, shawl rhythm, and body-zone differentiation
- [LIGHT / SHADOW] become realistic but still field-revealing
- [SPACE / DEPTH] become dimensional without turning into generic scenic realism
- [MOVEMENT / PHYSICS] become believable shawl drift, check/stripe field motion, and zoned cloth pull

Increase:

field realism, shawl weight, woven contrast, material depth, environmental completion.

Do not lose:

Jaintia recognizability, field identity, shawl logic, check/stripe structure, body-zone readability.

Avoid:

generic shawl realism, striped fashion styling, scenic realism with one handloom accent, only the clothing translated.

The final result must feel like a real Jaintia textile world.

Image-to-Image

Convert this source image into a full 3D realistic Jaintia textile world from Meghalaya.

Preserve the source image's subject count, action, and readability, but rebuild the full image through Jaintia field-and-shawl cloth logic. Do not merely add realistic stripes, checks, or woven shawls. Reconstruct shape, form, space, light, shadow, value, movement, hierarchy, and environment so the entire scene behaves like a dimensional Jaintia woven field-world.

The transformed image must become:

- field-structured rather than fabric-decorated
- shawl-rooted rather than generic wrap-styled
- body-zoned rather than costume-led
- regionally specific rather than generalized
- unified across cloth, subject, props, supporting forms, and environment

Do not let realism erase the branch.

Do not let only one cloth item become Jaintia.

Do not leave the rest of the world generic.

The final result must feel like Jaintia textile itself has become real.
