

Khambhat Agate (Akik) Carving - Gujarat

V1 — Authentic Style

Universal Hard Prompt

Create an image in the authentic visual logic of Khambhat Agate (Akik) carving from Gujarat as a worked hard-stone craft.

Treat this as raw agate transformed through heat, shaping, smoothing, drilling where needed, and final polish, not as generic gemstone jewelry styling, not as raw crystal display, not as decorative pebble polish, and not as surface ornament added afterward.

Build the entire image as if it is generated from real Khambhat agate intelligence:

raw agate as the starting material,
stone reduction from rough to refined form,
heat-assisted color and pattern enhancement,
chiselled / ground / shaped hard-stone form,
precise bead and object making,
drilling where needed,
final polish that reveals internal banding, translucency, and color zones,
Khambhat / Cambay craft lineage,
ancient bead-working center identity.

The object must feel worked first and admired second.

The beauty must come from craft revealing the stone, not from styling added around it.

Banding, translucency, and internal color variation must feel like revealed agate character.

The final polish must feel like the completion of a stone-working process, not cosmetic shine.

If humans, animals, trees, props, architecture, ground, objects, or environment are present, rebuild all of them through Khambhat worked-stone logic so the whole frame feels born from shaped agate mass, polished reveal, bead/object precision, and ancient craft intelligence, not like a normal scene with one gemstone inserted later.

Human skin and faces must remain clean and readable.

The style must enter through worked stone, polished reveal, banding/translucency, small-object precision, and Khambhat craft identity across the whole image.

Avoid:

generic gemstone jewelry styling,
raw crystal display,
decorative pebble look,
metal-setting-first design,
smooth luxury stone with no workshop memory,

one agate patch inside an unrelated world,
surface-only ornament.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] in the authentic visual logic of Khambhat Agate (Akik) carving from Gujarat.

Treat the style as a worked agate craft system, not as generic gemstone styling.

Core style lock:

raw agate as the material base,
heat-assisted enhancement,
hard-stone shaping and smoothing,
drilling where needed,
polish-based reveal of banding and translucency,
bead/object precision,
Khambhat/Cambay lineage,
whole-frame Khambhat consistency.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a Khambhat-built worked-agate presence.

[HUMANS] are rebuilt through shaped agate masses, polished stone segmentation, and bead/object precision logic; skin stays clean and human.

[ANIMALS] are rebuilt through carved/shaped agate form, polished band reveal, and worked-stone contour rather than generic realism.

[TREES / FOLIAGE] are rebuilt through shaped stone masses, polished agate pattern zones, and bead/object-oriented hard-stone logic rather than natural leaf realism.

[OBJECTS / GROUND / ARCHITECTURE] inherit worked agate mass, polished reveal, and stone-object precision.

[ENVIRONMENT] becomes a Khambhat agate world rather than generic realism.

Keep:

worked agate as the primary identity,
process-memory from rough to refined,
polish as reveal,
banding/translucency as material truth,
Khambhat bead/object intelligence.

Avoid:

generic gemstone styling,
raw crystal mood,
metal-first jewelry design,
surface decoration,
one correct agate object inside an unrelated image.

Image-to-Image

Convert this source image into the authentic visual world of Khambhat Agate (Akik) carving from Gujarat.

Preserve the source image's main subject relationships, action, and readability, but rebuild the entire image through Khambhat worked-stone grammar.

Replace ordinary surfaces with shaped agate mass.

Replace generic decoration with heat-worked, polished stone reveal.

Replace smooth styling with hard-stone process memory.

Replace plain color with internal banding, translucency, and agate pattern zones.

Replace generic object form with bead/object precision rooted in Khambhat craft.

If the source contains people, animals, trees, props, objects, architecture, ground, or environment, convert all of them so they feel generated by Khambhat agate intelligence instead of remaining normal realism.

Do not simply add polished gemstones to the image.

Do not leave the environment generic.

Do not make it look like jewelry display, crystal décor, or decorative pebble styling.

The final image must feel like a real Khambhat agate system expanded across the whole frame.

V2 — Artisan Translation

Universal Hard Prompt

Create a creative 2D + 3D image translation rooted in Khambhat Agate (Akik) carving from Gujarat.

This is not generic gemstone styling and not a full realistic world yet.

It must remain source-rooted in Khambhat grammar:

raw agate transformed through heat, shaping, smoothing, drilling where needed, and final polish,

revealed banding and translucency,

bead/object precision,

worked-stone material intelligence,

Khambhat/Cambay lineage.

Let the image gain dimensional body, richer stone depth, clearer polish, more visible internal banding, stronger translucency contrasts, and more articulated relation between rough-origin memory and refined final form.

But keep the image worked-stone-first.

It should still feel like Khambhat agate intelligence is constructing the image, not generic realism.

Extend Khambhat across all elements:

humans are shaped through worked agate masses, polished contouring, and precision object logic;

animals are shaped through carved/shaped hard-stone bodies and revealed agate banding;

trees are shaped through stone-cluster masses and polished agate pattern surfaces;

props, ground, and architecture are shaped through worked-stone precision and reveal-based surface logic.

Faces and skin stay readable and human.

No raw-crystal shortcut.

No metal-setting-first jewelry shortcut.

No decorative stone styling with no workshop memory.

Avoid:

generic luxury gemstone look,

crystal display aesthetics,

decorative pebble polish,

surface decoration added afterward,

normal realism with one agate artifact inserted.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a creative 2D + 3D translation rooted in Khambhat Agate (Akik) carving from Gujarat.

Preserve these source-core rules:

raw agate remains the material base,

heat/shaping/polish remains the structural process,

banding/translucency remains active,

bead/object precision remains visible,

Khambhat lineage remains present,

the whole frame remains inside one Khambhat system.

Translate the image like this:

[MAIN SUBJECT / MAIN FIELD] becomes a dimensionalized Khambhat worked-agate image zone.

[HUMANS] are rebuilt through shaped stone segmentation, polished agate surfaces, and bead/object precision logic; skin remains clean.

[ANIMALS] are rebuilt through worked agate contour, band-reveal surfaces, and hard-stone form logic.

[TREES / FOLIAGE] are rebuilt through shaped stone masses, polished pattern zones, and agate translucency logic.

[OBJECTS / GROUND / ARCHITECTURE] gain richer layering but remain governed by worked agate form and polished reveal.

[ENVIRONMENT] becomes a Khambhat image-field rather than generic realism.

Let these become richer:

stone depth,
polish clarity,
band visibility,
translucency contrast,
object precision,
image-body.

Keep unchanged:

worked-stone logic,
rough-to-refined process memory,
polish as reveal,
Khambhat bead/object identity.

Avoid:

generic gemstone styling,
raw crystal mood,
decorative stone luxury,
one Khambhat section inside an unrelated image.

Image-to-Image

Convert this source image into a creative 2D + 3D Khambhat Agate translation from Gujarat.

Preserve the source image's main action, subject count, and readability, but reconstruct the full image through Khambhat worked-stone grammar.

Replace ordinary surfaces with shaped agate mass and polished reveal.

Replace decorative shine with true stone polish.

Replace generic pattern with internal banding and translucency zones.

Replace plain object styling with bead/object precision rooted in Khambhat craft intelligence.

Allow the image to gain layered stone depth, richer polish, stronger internal pattern visibility, and more visible image-body.

But do not let it become full realism.

It must still behave like a dimensionalized Khambhat worked-stone field.

Do not paste gemstones onto a normal image.

Do not leave humans, trees, animals, or environment generic.
Do not turn it into jewelry branding or crystal décor.

The result must feel like Khambhat agate logic has gained image-body across the whole frame.

V3 — 3D / Realistic / Cinematic Translation

Universal Hard Prompt

Create a believable full 3D realistic dimensional world generated from Khambhat Agate (Akik) carving of Gujarat.

The realism must remain fully governed by Khambhat agate grammar, not by generic realism.

Build the whole world through:

raw agate as base material,
heat-assisted transformation,
hard-stone shaping and smoothing,
drilling where needed,
final polish that reveals banding, translucency, and color zones,
bead/object precision,
Khambhat/Cambay ancient craft lineage.

The world must feel as if Khambhat agate intelligence has become a complete dimensional reality.

Figures, clothing, objects, architecture, surfaces, environment, and spatial divisions must all belong to one Khambhat system.

The stone must still feel worked, not simply selected.

The polish must still feel like a reveal, not cosmetic shine.

The internal patterns must still feel agate-born and craft-revealed.

Humans must be rebuilt through shaped agate segmentation, polished stone surfaces, and bead/object precision while skin remains clean and human.

Animals must be rebuilt through worked agate contour and revealed banding/translucency logic.

Trees must be rebuilt through stone-cluster masses and agate pattern surfaces.

Ground, props, and architecture must all inherit Khambhat hard-stone intelligence.

Make the space fully volumetric and believable, but do not let realism erase the worked-agate origin.

This is not normal realism with one gemstone accent.

This is Khambhat agate grammar becoming world structure.

Avoid:

generic gemstone luxury realism,

raw crystal aesthetics,
decorative pebble styling,
metal-first jewelry logic,
surface-only polish,
one agate patch inside a non-Khambhat world.

Reusable Variable Template

Create [SUBJECT / SCENE / WORLD] as a full 3D realistic dimensional world generated from Khambhat Agate (Akik) carving of Gujarat.

Style system that must remain unchanged:

worked agate remains primary,
heat/shaping/polish remains structural,
banding/translucency remains visible,
bead/object precision remains active,
Khambhat lineage remains present,
whole-frame Khambhat consistency remains intact.

Translate the world like this:

[MAIN SUBJECT / MAIN FIELD] becomes a fully dimensional Khambhat-governed worked-agate presence.

[HUMANS] become volumetric but remain organized through shaped stone segmentation, polished reveal, and bead/object precision logic.

[ANIMALS] become volumetric but remain shaped by worked agate contour and internal banding/translucency.

[TREES / FOLIAGE] become volumetric but remain organized through stone-cluster masses and polished agate pattern surfaces.

[OBJECTS / GROUND / ARCHITECTURE] continue to structure the world through hard-stone shaping and polished reveal logic.

[ENVIRONMENT] becomes a believable spatial field organized by Khambhat intelligence rather than generic realism.

Increase:

full spatial depth,
material presence,
stone tactility,
polish clarity,
internal pattern reveal,
world completion.

Do not lose:

worked-stone process memory,
rough-to-refined transformation,
polish as reveal,
bead/object precision,

Khambhat/Cambay identity.

Avoid:

generic gemstone décor realism,
crystal-shop aesthetics,
metal-first jewelry styling,
decorative polish,
Khambhat as accent instead of world structure.

Image-to-Image

Convert this source image into a full 3D realistic Khambhat Agate world from Gujarat.

Preserve the source image's main composition, subject relationships, and readability, but rebuild the whole image through Khambhat worked-stone world grammar.

Replace normal realism with a world governed by raw agate transformed through heat, shaping, smoothing, drilling where needed, and polished reveal of banding/translucency. If the source contains figures, garments, props, objects, architecture, animals, trees, ground, or environment, convert all of them so they behave as if generated from Khambhat agate intelligence.

Keep the stone worked and structurally plausible.

Keep the polish as a reveal of inner material beauty.

Keep the whole frame organized by shaped agate mass and precision object logic rather than generic realistic arrangement.

Do not simply apply agate textures over the image.

Do not leave secondary forms generic.

Do not turn it into gemstone styling, crystal décor, or decorative stone luxury.

The final result must feel like Khambhat itself generated the world.
